CRYSTAL ORIENTATION MANUAL

BY ELIZABETH A. WOOD

BELL TELEPHONE LABORATORIES, INC.

COLUMBIA UNIVERSITY PRESS

NEW YORK AND LONDON 1963
Contents

Preface v
Introduction ix
1. Procedure for Orienting a Crystal 1
2. Symmetry 2
3. Crystallographic Axes 3
4. The 32 Crystal Classes 4
Symmetries of the 32 Point Groups
5. Miller Indices, "Forms," Multiplicity 8
Miller-Bravais Indices for Hexagonal Axes
6. Sources of Lattice Constant Data 10
7. Values of \( d \) from Lattice Constants 11
8. X-Ray Reflection from Atomic Planes in a Crystal—Missing Reflections in the Cubic System 12
9. Determination of the Bragg Reflecting Angle, \( \theta \) 13
10. Orders of Reflection: Notation, Choice 14
11. Space Groups: Glide Planes, Screw Axes, Missing Reflections 15
12. Visual Examination: Growth Faces, Cleavage Faces, Etch Pits 16
13. Twinning 18
14. Methods and Materials for Mounting Crystals 20
15. The Bond Adjustable Barrel Holder 22
16. The X-Ray Goniometer 24
17. How to Take Back-Reflection Laue Photographs 28
18. How to Interpret Back-Reflection Laue Photographs 30
19. The Greninger Net 32
The Greninger-Bond Net
20. Example of the Use of a Back-Reflection Laue Photograph and Stereographic Projection to Determine the Approximate Orientation of the Direction in a Germanium Crystal That Is Normal to the Film 39

21. Angles between Planes in Crystals of the Cubic System 41

22. Angles between Planes in the Orthogonal Systems 44

23. Allowed Reflections in the Cubic System 45

24. Examples of Pitfalls—Difficulties Actually Encountered in Crystal Orientation 46

25. The Stereographic Projection: Introduction 47

Uses of the Stereographic Projection

Appendix I. The Use of Polarized Light As an Aid in Orienting Transparent Crystals 60

Appendix II. Examples of Laue Photography by Paul H. Schmidt 64

Laue Patterns of Face-Centered and Body-Centered Cubic Crystals

Appendix III. Rhombohedral Crystals 75
