Statistical Mechanics of Nonequilibrium Processes
Volume 2: Relaxation and Hydrodynamic Processes

Akademie Verlag
Contents

Introduction .................................................. 9
Frequently used formulae ................................. 18
Errata to Volume 1 ........................................ 20

5 Linear irreversible processes ............................ 21
  5.1 Linear response to mechanical perturbations ........ 22
      5.1.1 General formalism ......................... 22
      5.1.2 Equilibrium correlation functions and retarded Green’s functions 28
      5.1.3 The response to stationary perturbations ........ 32
      5.1.4 Kubo’s approach to linear response theory ....... 33
      5.1.5 Isolated and isothermal susceptibility .......... 36
      5.1.6 Magnetic susceptibility ..................... 40
      5.1.7 Electrical conductivity ..................... 42
  5.2 Properties of susceptibilities and kinetic coefficients .. 45
      5.2.1 The spectral density ....................... 46
      5.2.2 Symmetry relations ......................... 47
      5.2.3 Onsager’s reciprocity relations ............. 52
      5.2.4 Dispersion relations ....................... 54
      5.2.5 Sum rules ................................... 55
      5.2.6 Fluctuation-dissipation theorems .......... 57
  5.3 The memory function formalism ..................... 59
      5.3.1 Linear evolution equations for observables .... 60
      5.3.2 Macroscopic dynamics of magnetic systems .... 65
      5.3.3 Connection between memory functions and correlation functions 68
      5.3.4 Relaxation time and the “plateau problem” .... 71
  5.4 Linear transport processes ......................... 75
      5.4.1 Linear kinetic equations .................... 75
      5.4.2 Linear hydrodynamic equations .............. 79
      5.4.3 Diffusion equation ......................... 82
Appendices to Chapter 5 .................................... 85
  5A Variational principle in linear response theory .. 85
6 Nonequilibrium correlations and Green's functions

6.1 Nonequilibrium thermodynamic correlations
   6.1.1 Perturbation expansion of nonequilibrium equations of state
   6.1.2 Nonequilibrium thermodynamic Green's functions
   6.1.3 Perturbation expansion of thermodynamic Green's functions
   6.1.4 Thermodynamic Green's functions for Fermi and Bose systems
   6.1.5 Nonequilibrium correlations in an electron gas

6.2 Correlations in quasi-equilibrium states
   6.2.1 Thermodynamic Green's functions in quasi-equilibrium
   6.2.2 Generalized susceptibility in the Green's function formalism
   6.2.3 The dielectric function for a charged particle system
   6.2.4 Kinetic coefficients in the Green's function formalism
   6.2.5 The electrical conductivity of high-temperature plasmas

6.3 Nonequilibrium real-time Green's functions
   6.3.1 The definition of real-time Green's functions
   6.3.2 Equations of motion and the Dyson equation
   6.3.3 The generalized kinetic equation
   6.3.4 The quasiparticle approximation
   6.3.5 Boundary conditions for the real-time Green's functions
   6.3.6 Inclusion of thermodynamic correlations

Appendices to Chapter 5

6A Evaluation of sums over discrete frequencies
6B Approximate dielectric function
6C The gradient expansion in the generalized kinetic equation

Problems to Chapter 6
9 Hydrodynamic fluctuations

9.1 Time evolution of large-scale fluctuations
9.1.1 Distribution function of hydrodynamic variables
9.1.2 The generalized Fokker-Planck equation
9.1.3 The gradient expansion in the Fokker-Planck equation
9.1.4 Functional form of the Fokker-Planck equation
9.1.5 The entropy functional for hydrodynamic fluctuations

9.2 Fluctuations in a one-component fluid
9.2.1 Thermodynamics of fluctuations
9.2.2 The drift terms and the bare kinetic coefficients
9.2.3 The Langevin formalism in fluctuating hydrodynamics

9.3 Hydrodynamic fluctuations in nonequilibrium steady states
9.3.1 Time correlations of the nonequilibrium fluctuations
9.3.2 The linearized Langevin equations for a simple fluid
9.3.3 Density fluctuations in steady states: sound frequencies
9.3.4 Density fluctuations in steady states: low frequencies

9.4 Statistical mechanics of turbulence
9.4.1 Statistical description of turbulent flows in fluids
9.4.2 The Fokker-Planck equation for turbulent flows
9.4.3 Separation of variables in the Fokker-Planck equation
9.4.4 The Reynolds equations
9.4.5 The entropy and the free energy of turbulent flow
9.4.6 Normal solutions of the Fokker-Planck equation

Appendices to Chapter 9
9A The projection operator in fluctuating hydrodynamics
9B The equilibrium solution of the Fokker-Planck equation
9C Derivation of the Fokker-Planck equation from stochastic hydrodynamic equations

Problems to Chapter 9
