Contents

Preface .................................................................................. v

PART I. Crystal Growth Theory and Simulations ................... 1
Thermodynamic vs. kinetic critical nucleus and the reversible work of nucleus formation
K. Nishioka ........................................................................... 3
The terrace–step–kink approach and the capillary-wave approach to fluctuation properties of vicinal surfaces
T. Yamamoto, N. Akutsu and Y. Akutsu ................................. 19
Fluctuation and morphological instability of steps in a surface diffusion field
M. Uwaha ........................................................................... 31
Pattern formation of a crystal growing in a diffusion field
Y. Saito .............................................................................. 47
Step structures of Si(111) vicinal surfaces
A. Natori ........................................................................... 61
Step growth mechanism on (001) surfaces of diamond structure crystals
M. Tsuda and M. Hata .......................................................... 75
Monte Carlo simulation of MBE growth
T. Irisawa and Y. Arima ......................................................... 89
Crystal growth kinetics on stepped surface by the path probability method
K. Wada and H. Ohmi ............................................................ 101

PART II. Growth Kinetics ......................................................... 115
Inter-surface diffusion of cation incorporation in MBE of GaAs and InAs
T. Nishinaga and X.Q. Shen .................................................. 117
Study of surface chemical reactions in GaAs atomic layer epitaxy by in situ monitoring methods
A. Koukitu ........................................................................... 131
Surface kinetics and mechanism of atomic layer epitaxy of GaAs using trimethylgallium
H. Ohno .............................................................................. 149
Atomic ordering in epitaxial alloy semiconductors: from the discoveries to the physical understanding
H. Nakayama, T. Kita and T. Nishino ............................................. 163
Monte Carlo simulation of microstructures in ordered III–V semiconductor alloys
N. Kuwano and K. Oki ................................................................. 185
Control of rotational twins on heterointerface of fluoride and semiconductors
K. Tsutsui, S. Ohmi, K. Kawasaki and N.S. Sokolov .............................. 203
Growth of Ag crystallites on Mo(110) substrate observed by “in-situ” SEM
Y. Gotoh, A. Horii, H. Kawanowa, M. Kamei, H. Yumoto, T. Gonda ........... 213
Induction time of electrical nucleation in supercooled sodium acetate trihydrate aqueous solution
Y. Iba and T. Ohachi ................................................................. 223
Growth mechanism of smoke particles
C. Kaito, S. Kimura and Y. Saito .................................................... 235

PART III. Observations of Growth Surface and Interface .................. 245
Thermally oxidized layers on Si-wafers – Surface X-ray scattering and field ion microscopy
J. Harada, I. Takahashi, T. Shimura and M. Umeno .............................. 247
Atom exchange process at the growth front in OMVPE revealed by X-ray CTR scattering measurement
Y. Takeda and M. Tabuchi ............................................................. 267
Surface structures during silicon growth on an Si(111) surface
A. Ichimiya, H. Nakahara and Y. Tanaka ........................................ 279
REM studies of surfactant-mediated epitaxy
H. Minoda and K. Yagi ................................................................. 293
Oscillations of the intensity of scattered energetic ions from growing surface
K. Nakajima, Y. Fujii, K. Narumi, K. Kimura and M. Mannami ............... 309
Scanning tunneling microscopy study of solid phase epitaxy processes on the Si(001)-2×1 surface
T. Yao, T. Komura, K. Uesugi and M. Yoshimura ................................ 323
Crystal growth of polymers in thin films
K. Izumi, Gan Ping, M. Hashimoto, A. Toda, H. Miyaji, Y. Miyamoto and Y. Nakagawa .................. 337
Crystal growth and control of molecular orientation and polymorphism in physical vapor deposition of long-chain compounds
Polymer crystallization approached from a new viewpoint of chain sliding diffusion
M. Hikosaka ............................................................. 365
PART IV. Mechanisms of Heteroepitaxy

Initial growth layer, island formation, and critical thickness of InAs heteroepitaxy on GaAs substrate
   A. Sasaki

Effects of buffer layers in heteroepitaxy of gallium nitride
   K. Hiramatsu, T. Detchprohm, H. Amano and I. Akasaki

Growth processes in the heteroepitaxy of Ge and Si_{1-x}Ge_{x} on Si substrates using gas-source molecular beam epitaxy
   Y. Yasuda, H. Ikeda and S. Zaima

Crystal growth mechanisms in III–V/Si heteroepitaxy
   T. Soga and M. Umemo

Atomic layer epitaxy of GaAs, AlAs and GaN using GaCl_{3} and AlCl_{3}
   F. Hasegawa

Surface diffusion processes of Ga and Al in MBE – formation of 10-nm scale GaAs ridge structures
   T. Noda, S. Koshiba, Y. Nakamura, Y. Nagamune and H. Sakaki

Heteroepitaxy of cadmium telluride on sapphire
   M. Kasuga, D. Kodama, H. Hagiwara, K. Kagami, K. Yano and A. Shimizu

Formation of strain-free heteroepitaxial structures by annealing under ultrahigh pressure
   H. Ishiwara and T. Hoshino

PART V. Crystal Growth and Mechanism of Complex Systems

Growth mechanism of oxide superconductor crystals
   H. Takei

An atomic level analysis of crystal growth mechanism in complex systems by means of nano-optical microscopy and AFM
   H. Komatsu, S. Miyashita, T. Nakada, G. Sazaki and A.A. Chernov

A comprehensive treatise on crystal growth from aqueous solutions
   T. Ogawa

Crystallization of sol–gel derived ferroelectric thin films with preferred orientation
   S. Hirano, T. Yogo and W. Sakamoto

Anisotropy in microscopic structures of ice–water and ice–vapor interfaces and its relation to growth kinetics
   Y. Furukawa and H. Nada

Growth of InGaSbBi bulk crystals on InSb seeds and rapid permeation of Ga into InSb during growth
   M. Kumagawa and Y. Hayakawa

Subject index
