# CONTENTS

## CHAPTER 1  *Fundamental Concepts*

1.1 Symmetry Operations and Elements 1  
1.2 Defining the Coordinate System 12  
1.3 Combining Symmetry Operations 14  
1.4 Symmetry Point Groups 18  
1.5 Point Groups of Molecules 21  
1.6 Systematic Point Group Classification 28  
1.7 Optical Activity and Symmetry 33  
Problems 35

## CHAPTER 2  *Representations of Groups*

2.1 Irreducible Representations 40  
2.2 Unit Vector Transformations 43  
2.3 Reducible Representations 46  
2.4 More Complex Groups and Standard Character Tables 52  
2.5 General Relationships of Irreducible Representations 61  
Problems 64

## CHAPTER 3  *Techniques and Relationships for Chemical Applications*

3.1 Systematic Reduction of Reducible Representations 66  
3.2 Handling Representations with Imaginary Characters 70  
3.3 Group–Subgroup Relationships: Descent and Ascent in Symmetry 73  
3.4 Reducing Representations of Groups with Infinite Order 79  
3.5 More About Direct Products 81  
Problems 84

## CHAPTER 4  *Symmetry and Chemical Bonding*

4.1 Orbital Symmetries and Overlap 88  
4.2 Valence Bond Theory and Hybrid Orbitals 94  
4.3 Localized and Delocalized Molecular Orbitals 104  
4.4 MXₙ Molecules with Pi-Bonding 117  
4.5 Pi-Bonding in Aromatic Ring Systems 126  
Problems 132
CHAPTER 5  Equations for Wave Functions  

5.1 Formulating SALCs with Projection Operators 138 
5.2 SALCs of Pi Systems 149 
5.3 Formulating Hybrid Orbitals 153 
5.4 Systems with Nonequivalent Positions 157 
Problems 162 

CHAPTER 6  Vibrational Spectroscopy  

6.1 Vibrational Modes and Their Symmetries 165 
6.2 Symmetry-Based Selection Rules and Their General Consequences 180 
6.3 Spectroscopic Activities and Structures of Nonlinear Molecules 185 
6.4 Linear Molecules 190 
6.5 Overtones, Combinations, and Other Complications 192 
Problems 198 

CHAPTER 7  Transition Metal Complexes  

7.1 Crystal Field Theory 201 
7.2 Jahn–Teller Distortions and Other Crystal Fields 210 
7.3 Molecular Orbital Approach to Bonding in Complexes 214 
7.4 Terms of Free Ions with dⁿ Configurations 227 
7.5 Splitting of Terms 233 
7.6 Electronic Spectra of Transition Metal Complexes 248 
Problems 256 

APPENDIX A  Point Group Character Tables  

APPENDIX B  Correlation Tables  

APPENDIX C  Normal Modes of Some Common Structures  

APPENDIX D  Tanabe and Sugano Diagrams
