 Preface                                                                 xiii  
 List of Contributors                                                   xv  

1 Introduction

_Francis M. Mirabella_

1.1. Transmission Spectroscopy                                           4  
1.2. Specular Reflectance Spectroscopy                                  5  
1.3. Attenuated Total Reflectance Spectroscopy                          5  
1.4. Diffuse Reflectance Spectroscopy                                   6  
1.5. Photoacoustic Spectroscopy                                         7  
1.6. Infrared Microspectroscopy                                         7  
1.7. Raman Microspectroscopy                                            8  
1.8. Fiber Optics Techniques                                            9  
1.9. Emission Spectroscopy                                              9  
References                                                               10  

## Contents

References 71
Glossary 80

### 3 Specular Reflection Spectroscopy
*Robert J. Lippert, Brian D. Lamp, and Marc D. Porter*

3.1. Introduction 83
3.2. Theoretical Considerations 84
- Propagation of Electromagnetic Radiation through a Noncon ducting Homogeneous Medium 85
- Reflection of Electromagnetic Radiation at a Boundary between Homogeneous Media of Different Optical Properties 89
- Band Distortions 95
- Orientation Analysis 102
3.3. Experimental Considerations 104
3.4. Applications 110
- Organized Thin Films 110
- Redox Transformations at Electrochemical Interfaces 114
- Aluminum Nitride Thin-Film Characterization 122
3.5. Conclusions and Prospectus 124
References 124

### 4 Attenuated Total Reflection Spectroscopy
*Francis M. Mirabella*

4.1. Introduction 127
4.2. History 128
4.3. Principles and Theory 132
4.4. Practical Considerations 142
4.5. Advantages and Disadvantages 153
- Advantages 153
- Disadvantages 156
4.6. Spectral Regions and Spectral Techniques Employing ATR 159
4.7. Applications of ATR Spectroscopy 160
- Surface Chemistry 160
- Surface Orientation 175
- Specific Experimental Details 178
4.8. Conclusion 183
References 183
5 Diffuse Reflectance Spectroscopy  185
Jonathan P. Blitz

5.1. Introduction  185
5.2. Role of Diffuse Reflectance in Molecular Spectroscopy  187
5.3. Diffuse Reflectance Theory and Practice  189
   Fresnel and Kubelka-Munk Reflectance  189
   Kubelka-Munk Theory  192
   The Practice of Diffuse Reflectance Spectroscopy  198
5.4. Applications of Diffuse Reflectance Spectroscopy  208
   Diffuse Reflectance UV-Visible Spectroscopy  208
   Diffuse Reflectance Near-Infrared Spectroscopy  209
   Diffuse Reflectance Mid-Infrared Spectroscopy  212
5.5. Conclusions  216
References  217

6 Photoacoustic Spectroscopy  221
J. F. McClelland, S. J. Bajic, R. W. Jones, and L. M. Seaverson

6.1. Introduction  221
   History and Basic Idea of PAS  222
   Controllable Sampling Depth  223
   Practical Uses of Controllable Sampling Depth  224
6.2. Signal Generation Theory and Data Analysis Treatments  225
   Magnitude of the Photoacoustic Signal  226
   Phase of the Photoacoustic Signal  227
   Photoacoustic Signal Saturation  228
   Sampling Depth  230
   Interpretation of Photoacoustic Signal Phase Data  232
6.3. Instrumentation  236
   Photoacoustic Detector  236
   FTIR Spectrometer  242
   Phase Modulation  245
6.4. Applications  248
   Rapid Identification of Polymers for Recycling  248
   Quantitative Analysis of Major and Minor Concentrations of
   Additives in Paper Products  249
   Analysis of Aqueous Sludges with Soluble and Insoluble
   Species  251
   Quantitation of CaCO₃ Residual in Lime  255
9.2. Theory
- Blackbody Radiation 325
- Real-Sample (Graybody) Radiation 329
- Infrared Emission Spectroscopy of Semitransparent Thin Films 330
- Stray Light 333
- Emission Band Distortions 334
- Temperature Determination 336

9.3. Experimental Considerations
- Spectrometers 338
- Constant Temperature IR Emission Attachments 339
- Transient Infrared Emission Spectroscopy 341
- Multivariate Calibration 342

9.4. Applications
- Gas Phase Studies 343
- Small Molecules on Surfaces 345
- Characterization of Solid Samples 345
- Atmospheric Studies 348
- Planetary Observations 348
- Minerals and Mineral Deposits 349
- Organic Thin Films 351
- Dielectric Thin Films 357

9.5. Conclusion
References 371

10 Fiber Optics in Molecular Spectroscopy 377

Chris W. Brown

10.1. Introduction
- Description of Optical Fibers 377
- Internal Reflection Considerations 378
- Core-Cladding 379
- Evanescent Wave 379
- Fiber Throughput 380

10.2. Selecting Fibers 380
- Optical Regions 380
- Single Fibers or Bundles as Probes 384

10.3. Interfacing Fibers 386
- Spectrometer Accessories 386
Contents

Coupling Fibers to Spectrometer Accessories 387

10.4. Sampling Configuration 387
   Straight-through Transmission Probes 387
   Reflection-Absorption Probes 388
   Evanescent Wave Probes 388
   Fiber Optic Lenses 389

10.5. Applications 390
   Drug Dissolution 390
   Water Analysis in the Near-IR 393
   Gas Analysis in the Near-IR 396
   Lamination Monitoring in the Mid-IR 397

10.6. Conclusion 400
