Contents

Preface / xxii
AAAI Organization / xxv
Corporate Sponsors / xxvii
AAAI–97 / IAAI–97 Program Committee / xxviii
AAAI–97 Best Paper Awards / xxxi

AAAI–97 Technical Papers

Agents

Agent Architecture
If at First You Don’t Succeed... / 3
Kentaro Toyama and Gregory D. Hager, Yale University

Modeling Emotions and Other Motivations in Synthetic Agents / 10
Juan D. Velásquez, Massachusetts Institute of Technology

Agent Coordination
Coordinating Agents by Role Based Social Constraints and Conversation Plans / 16
Mihai Barbuceanu, University of Toronto

Agent Architectures for Flexible, Practical Teamwork / 22
Milind Tambe, University of Southern California

Negotiation
Negotiation on Data Allocation in Multi-Agent Environments / 29
Rina Schwartz, Bar-Ilan University and Sari Kraus, Bar-Ilan University and University of Maryland

Benefits of Learning in Negotiation / 36
Dajun Zeng and Katia Sycara, Carnegie Mellon University
Automated Reasoning

Automated Reasoning/Diagnosis
Representing Actions and State Constraints in Model-Based Diagnosis / 43
Sheila A. McIlraith, Xerox Palo Alto Research Center and Stanford University

Fast Context Switching in Real-Time Propositional Reasoning / 50
P. Pandurang Nayak and Brian C. Williams, NASA Ames Research Center

Automated Reasoning & the User Interface
Visual Prompts and Graphical Design: A Framework for Exploring the Design Space of
2-D Charts and Graphs / 57
Vibhu O. Mittal, University of Pittsburgh

Navigation and Planning in a Mixed-Initiative User Interface / 64
Robert St. Amant, North Carolina State University

Belief and Decision
Possibilistic and Standard Probabilistic Semantics of Conditional Knowledge / 70
Salem Benferhat, Didier Dubois and Henri Prade, CNRS

On the Axiomatization of Qualitative Decision Criteria / 76
Ronen I. Brafman, University of British Columbia and Moshe Tennenholtz, Technion - Israel Institute of Technology

Classification
Symbolic Nearest Mean Classifiers / 82
Piew Datta and Dennis Kibler, University of California, Irvine

Classification and Reductio-ad-Absurdum Optimality Proofs / 88
Haim Schweitzer, The University of Texas at Dallas

Diagnosis
The Effect of Observations on the Complexity of Model-Based Diagnosis / 94
Adnan Darwiche, American University of Beirut and Gregory Provan, Rockwell Science Center

Monitoring, Prediction, and Fault Isolation in Dynamic Physical Systems / 100
Pieter J. Mosterman and Gautam Biswas, Vanderbilt University

Modeling for Decision Processes
Model Minimization in Markov Decision Processes / 106
Thomas Dean and Robert Givan, Brown University

Structured Solution Methods for Non-Markovian Decision Processes / 112
Fahiem Bacchus, University of Waterloo; Craig Boutilier, University of British Columbia; Adam Grove, NEC Research Institute
Qualitative Reasoning

Model Decomposition and Simulation: A Component Based Qualitative Simulation Algorithm / 118
Daniel J. Clancy and Benjamin Kuipers, University of Texas at Austin

Static and Dynamic Abstraction Solves the Problem of Chatter in Qualitative Simulation / 125
Daniel J. Clancy and Benjamin Kuipers, University of Texas at Austin

Reasoning about Physical Systems

The “Inverse Hollywood Problem”: From Video to Scripts and Storyboards via Causal Analysis / 132
Matthew Brand, Massachusetts Institute of Technology

Qualitative Rigid Body Mechanics / 138
Thomas F. Stahovich, Carnegie Mellon University; Randall Davis and Howard Shrobe, Massachusetts Institute of Technology

Spatial Uncertainty

Integrating a Spatial Reasoner with a Resolution Theorem-Prover / 145
Thomas R. Ioerger, Texas A&M University

Noise, Non-Determinism and Spatial Uncertainty / 153
Murray Shanahan, Queen Mary and Westfield College

Projective Relations for 3D Space: Computational Model, Application, and Psychological Evaluation / 159
Constanze Vorwerg, Gudrun Socher, Thomas Fuhr, Gerhard Sagerer and Gert Rickheit, Universität Bielefeld

Techniques for Temporal Reasoning

A New Unification Method for Temporal Reasoning with Constraints / 165
Eddie Schwalb, University of California, Irvine

Connection Based Strategies for Deciding Propositional Temporal Logic / 172
Subash Shankar and James Slagle, University of Minnesota

Constraint Satisfaction and Search

Constraint Satisfaction Problems and Bayes Networks

Bayes Networks for Estimating the Number of Solutions to a CSP / 179
Amon Meisels, Solomon Eyal Shimony and Gadi Solotorevsky, Ben-Gurion University

A Practical Algorithm for Finding Optimal Triangulations / 185
Kirill Shoikhet and Dan Geiger, Technion

Constraint Satisfaction Problems: Symmetry

Interchangeability Supports Abstraction and Reformulation for Multi-Dimensional Constraint Satisfaction / 191
Eugene C. Freuder and Daniel Sabin, University of New Hampshire
Exploiting Symmetry in Lifted CSPs / 197
David Joslin and Amitabha Roy, University of Oregon

Constraint Satisfaction Techniques
Using CSP Look-Back Techniques to Solve Real-World SAT Instances / 203
Roberto J. Bayardo Jr., The University of Texas at Austin and Robert C. Schrag, Information Extraction and Transport, Inc.

Using Branch-and-Bound with Constraint Satisfaction in Optimization Problems / 209
Stephen Beale, New Mexico State University

Detecting Unsatisfiable CSPs by Coloring the Micro-Structure / 215
Daya Ram Gaur, W. Ken Jackson and William S. Havens, Simon Fraser University

Efficient Reasoning
Problem Structure in the Presence of Perturbations / 221
Carla P. Gomes, Rome Laboratory and Bart Selman, AT&T Laboratories

Model-Theoretic Semantics and Tractable Algorithm for CNF-BCP / 227
Rahul Roy-Chowdhury and Mukesh Dalal, Columbia University

Heuristics for Scheduling
Beyond Contention: Extending Texture-Based Scheduling Heuristics / 233
J. Christopher Beck and Andrew J. Davenport, University of Toronto;
Edward M. Sitarski, Numetrix Limited; Mark S. Fox, University of Toronto

Texture-Based Heuristics for Scheduling Revisited / 241
J. Christopher Beck and Andrew J. Davenport, University of Toronto; Edward M. Sitarski,
Numetrix Limited; Mark S. Fox, University of Toronto

Information Retrieval
Query Optimization Using Local Completeness / 249
Oliver M. Duschka, Stanford University

Template-Based Information Mining from HTML Documents / 256
Jane Yung-jen Hsu and Wen-tau Yih, National Taiwan University

Local Search: Beyond SAT
Local Search Algorithms for Partial MAXSAT / 263
Byungki Cha and Kazuo Iwama, Kyushu University; Yahiko Kambayashi, Kyoto University;
Shuichi Miyazaki, Kyushu University

Solving Linear Pseudo-Boolean Constraint Problems with Local Search / 269
Joachim P. Walser, Universität des Saarlandes
Local Search Techniques
Variable-Selection Heuristics in Local Search for SAT / 275
Alex S. Fukunaga, Jet Propulsion Laboratory/California Institute of Technology

Tabu Search for SAT / 281
Bertrand Mazure, Lakhdar Saïs and Éric Grégoire, CRIL - Université d'Artois

Problem Solving & Computational Resources
Models of Continual Computation / 286
Eric Horvitz, Microsoft Research

Complex Goal Criteria and Its Application in Design-to-Criteria Scheduling / 294
Thomas Wagner, University of Massachusetts; Alan Garvey, Truman State University; Victor Lesser, University of Massachusetts

Scheduling
Effective Redundant Constraints for Online Scheduling / 302
Lise Getoor, Stanford University; Greger Ottosson, Uppsala University; Markus Fromherz and Björn Carlson, Xerox Palo Alto Research Center

Stochastic Procedures for Generating Feasible Schedules / 308
Angelo Oddi, Università di Roma “La Sapienza” and Stephen F. Smith, Carnegie Mellon University

Search (Cost)
The Scaling of Search Cost / 315
Ian P. Gent, Ewan MacIntyre, Patrick Prosser and Toby Walsh, University of Strathclyde

Evidence for Invariants in Local Search / 321
David McAllester, Bart Selman and Henry Kautz, AT&T Laboratories

Structure of Constraint Satisfaction Problems
Summarizing CSP Hardness with Continuous Probability Distributions / 327
Daniel Frost, Irina Rish and Lluís Vila, University of California, Irvine

Exploiting the Deep Structure of Constraint Satisfaction Problems with Quantum Computers / 334
Tad Hogg, Xerox Palo Alto Research Center

Clustering at the Phase Transition / 340
Andrew J. Parkes, University of Oregon

Education and Evaluation
Computational Systems for Education
Realtime Generation of Customized 3D Animated Explanations for Knowledge-Based Learning Environments / 347
William H. Bares and James C. Lester, North Carolina State University
The Sounds of Silence: Towards Automated Evaluation of Student Learning in a Reading Tutor that Listens / 355
Jack Mostow and Gregory Aist, Carnegie Mellon University

Experimental Methodology
Presenting and Analyzing the Results of AI Experiments: Data Averaging and Data Snooping / 362
C. Lee Giles and Steve Lawrence, NEC Research Institute

Knowledge Representation

Building and Modifying Knowledge Bases
Building Concept Representations from Reusable Components / 369
Peter Clark, Boeing Company and Bruce Porter, University of Texas at Austin

A Script-Based Approach to Modifying Knowledge Bases / 377
Yolanda Gil and Marcelo Tallis, University of Southern California

Description Logics
Representing Sequences in Description Logics / 384
Haym Hirsh and Daniel Kudenko, Rutgers University

P-CLASSIC: A Tractable Probabilistic Description Logic / 390
Daphne Koller, Stanford University; Alon Levy, AT&T Labs; Avi Pfeffer, Stanford University

Knowledge Representation for Automated Reasoning
A Reflective Proof System for Reasoning in Contexts / 398
Pierre E. Bonzon, University of Lausanne

Obvious Properties of Computer Programs / 404
Robert Givan, Brown University

Knowledge Representation: Expert Systems
Applications of Rule-Base Coverage Measures to Expert System Evaluation / 411
Valerie Barr, Hofstra University

Detecting Redundant Production Rules / 417
James G. Schmolze, Tufts University and Wayne Snyder, Boston University

Knowledge Representation: Nonmonotonic Logic
A Comparison of Two Approaches to Splitting Default Theories / 424
Grigoris Antoniou, Griffith University

Reasoning with Minimal Belief and Negation as Failure: Algorithms and Complexity / 430
Riccardo Rosati, Università di Roma “La Sapienza”
Knowledge Representation: Ontologies
Tools for Assembling Modular Ontologies in Ontolingua / 436
Richard Fikes, Adam Farquhar and James Rice, Stanford University

Efficient Management of Very Large Ontologies / 442
Kilian Stoffel, Merwyn Taylor and Jim Hendler, University of Maryland

Knowledge Representation: Reasoning about Action
Beyond Minimizing Change / 448
Tom Costello, Stanford University

Adding Knowledge to the Action Description Language A / 454
Jorge Lobo, University of Illinois at Chicago; Gisela Mendez, Universidad Central de Venezuela; Stuart R. Taylor, University of Illinois at Chicago

Causal Theories of Action and Change / 460
Norman McCain and Hudson Turner, University of Texas at Austin

Qualified Ramifications / 466
Michael Thielscher, FG Intellektik

Knowledge Representation: Theorem Proving
Ordered Semantic Hyper Linking / 472
David A. Plaisted and Yunshan Zhu, University of North Carolina

Extending the Regular Restriction of Resolution to Non-Linear Subdeductions / 478
Bruce Spencer and J. D. Horton, University of New Brunswick

Learning
Formal Analyses of Learning
Worst-Case Absolute Loss Bounds for Linear Learning Algorithms / 485
Tom Bylander, The University of Texas at San Antonio

Version Spaces without Boundary Sets / 491
Haym Hirsh, Rutgers University; Nina Mishra and Leonard Pitt, University of Illinois at Urbana

Representation, Search and Genetic Algorithms / 497
Darrell Whitley and Soraya B. Rana, Colorado State University

Knowledge Discovery in Databases
Pattern Discovery in Distributed Databases / 503
Raj Bhatnagar and Sriram Srinivasan, University of Cincinnati

More Efficient Windowing / 509
Johannes Fürnkranz, Austrian Research Institute for Artificial Intelligence
Learning In Linguistic Domains
Maximally Parsimonious Discrimination: A Generic Task from Linguistic Discovery / 515
Raul Valdes-Perez, Carnegie Mellon University and Vladimir Pericliev, Bulgarian Academy of Science

Sparse Representations for Fast, One-Shot Learning / 521
Kenneth Yip and Gerald Jay Sussman, Massachusetts Institute of Technology

Machine Learning (Probabilistic)
Intelligent Methods for File System Optimization / 528
Leo Kuwayev, University of Massachusetts; C. L. Giles, J. Philbin and H. Cejtin, NEC Research Institute

Learning Bayesian Networks from Incomplete Data / 534
Moninder Singh, University of Pennsylvania

Model Selection and Overfitting
Lessons in Neural Network Training: Overfitting May be Harder than Expected / 540
Steve Lawrence and C. Lee Giles, NEC Research; Ah Chung Tsoi, University of Wollongong

An Empirical Evaluation of Bagging and Boosting / 546
Richard Maclin, University of Minnesota-Duluth and David Opitz, University of Montana

A New Metric-Based Approach to Model Selection / 552
Dale Schuurmans, University of Pennsylvania and NEC Research Institute

Parallelism in Learning
Maximizing the Benefits of Parallel Search Using Machine Learning / 559
Diane J. Cook and R. Craig Varnell, University of Texas at Arlington

Generating C4.5 Production Rules in Parallel / 565
Richard Kufrin, University of Illinois at Urbana-Champaign

Reactive Behavior
Detecting and Reacting to Unplanned-for World States / 571
Ella M. Atkins, Edmund H. Durfee, and Kang G. Shin, University of Michigan

Reinforcement Learning with Time / 577
Daishi Harada, University of California, Berkeley

Text Retrieval and Learning
Transferring and Retraining Learned Information Filters / 583
William W. Cohen, AT&T Labs-Research and Daniel Kudenko, Rutgers University

Active Learning with Committees for Text Categorization / 591
Ray Liere and Prasad Tadepalli, Oregon State University
Natural Language

Language and Learning
Statistical Parsing with a Context-Free Grammar and Word Statistics / 598
Eugene Charniak, Brown University

A New Supervised Learning Algorithm for Word Sense Disambiguation / 604
Ted Pedersen and Rebecca Bruce, Southern Methodist University

Natural Language
A Pragmatic Treatment of Quantification in Natural Language / 610
Walid S. Saba and Jean-Pierre Corriveau, Carleton University

Comparatives in Context / 616
Steffen Staab and Udo Hahn, Freiburg University

Natural Language Generation
Multi-Document Summarization by Graph Search and Matching / 622
Inderjeet Mani and Eric Bloedorn, The MITRE Corporation

From Local to Global Coherence: A Bottom-Up Approach to Text Planning / 629
Daniel Marcu, University of Toronto

Perception and Behavior

Multi-Agent Systems
Interference as a Tool for Designing and Evaluating Multi-Robot Controllers / 637
Dani Goldberg and Maja J. Mataric, Brandeis University

Using Communication to Reduce Locality in Multi-Robot Learning / 643
Maja J. Mataric, Brandeis University

Navigation & Perception
Spatial Navigation with Uncertain Deviations / 649
Michel de Rougemont, University Paris-II and Christoph Schlieder, Universität Freiburg

A Color Interest Operator for Landmark-Based Navigation / 655
Zachary Dodds and Gregory D. Hager, Yale University

Combining Approximate Front End Signal Processing with Selective Reprocessing in Auditory Perception / 661
Frank Klessner and Victor Lesser, University of Massachusetts; Hamid Nawab, Boston University
Planning

Case-Based Reasoning and Planning
Analogical Replay for Efficient Conditional Planning / 668
Jim Blythe and Manuela Veloso, Carnegie Mellon University

Case-Based Similarity Assessment: Estimating Adaptability from Experience / 674
David B. Leake, Andrew Kinley and David Wilson, Indiana University

Flexible Hierarchical Planning
Dynamic Abstraction Planning / 680
Robert P. Goldman, David J. Musliner, Kurt D. Krebsbach and Mark S. Boddy, Honeywell Technology Center

Abductive Completion of Plan Sketches / 687
Karen L. Myers, SRI International

Optimal Planning
A Linear Programming Heuristic for Optimal Planning / 694
Tom Bylander, The University of Texas at San Antonio

Finding Optimal Solutions to Rubik’s Cube Using Pattern Databases / 700
Richard E. Korf, University of California, Los Angeles

Plan Generation
Planning by Rewriting: Efficiently Generating High-Quality Plans / 706
José Luis Ambite and Craig A. Knoblock, University of Southern California

A Robust and Fast Action Selection Mechanism for Planning / 714
Blai Bonet, Gábor Loerincs and Héctor Geffner, Universidad Simón Bolívar

Planning with Concurrent Interacting Actions / 720
Craig Boutilier and Ronen I. Brafman, University of British Columbia

Planning Under Uncertainty
A Heuristic Variable Grid Solution Method for POMDPs / 727
Ronen I. Brafman, University of British Columbia

Incremental Methods for Computing Bounds in Partially Observable Markov Decision Processes / 734
Milos Hauskrecht, Massachusetts Institute of Technology

Probability and Planning
Effective Bayesian Inference for Stochastic Programs / 740
Daphne Koller, Stanford University; David McAllester, AT&T Research; Avi Pfeffer, Stanford University
Invited Talks

The AAAI–97 Mobile Robot Competition: Martians, Remotes, Hors d’oeuvres, and Cleaning Up the Mess Afterwards / 755
Ronald C. Arkin, Georgia Institute of Technology, and R. James Firby, University of Chicago

The Emergence of Spacecraft Autonomy / 756
Richard J. Doyle, Jet Propulsion Laboratory, California Institute of Technology

What Does Knowledge Representation Have to Say to Artificial Intelligence? / 762
David W. Etherington, University of Oregon

Machine Learning for Intelligent Systems / 763
Pat Langley, Daimler-Benz Research and Technology Center

James Bond and Michael Ovitz: The Secret Life of Agents / 770
Katia P. Sycara, Carnegie Mellon University

Market-Oriented Programming (Abstract) / 774
Michael P. Wellman, University of Michigan

Mobile Robot Competition Abstracts

Hack and Kluge / 776
CPT Pete Beim, Ian Horswill and Ivan Yen, Northwestern University

Learning in a Fuzzy Logic Robot Controller / 778
Douglas S. Blank and J. Oliver Ross, University of Arkansas

Autonomous Exploration: An Integrated Systems Approach / 779
Marc Bolduc, Eric Bourque, Gregory Dudek, Nicholas Roy, and Robert Sim, McGill University

ServerDroid: A MultiMedia Service Robot / 781
Pete Bonasso, Texas Robotics & Automation Center Laboratories

A Situated Vacuuming Robot / 783
D. Bruennner, R. Dickson, J. Dilatush, D. Lewis, H. Macevak, M. Mirarchi, M. Morton, J. Tracy, A. Vorobiev, and L. Meeden, Swarthmore College

Teaming Up: Georgia Tech’s Multi-Robot Competition Teams / 785
Thomas R. Collins and Tucker R. Balch, Georgia Institute of Technology

The Dartmouth Mobile Robot: SK / 787
William Garner, Gregory Friedland, Artyom Lifshits, Daniela Rus, Keith Kotay and Jon Howell, Dartmouth College
SIGART / AAAI Doctoral Consortium Abstracts

Pragmatic Question Answering: Generic versus Specific Responses / 807
Debra T. Burhans, State University of New York at Buffalo

Adaptive Hybrid System Architecture for Forecasting / 808
Juan M. Corchado, University of Paisley

Iterative Refinement of Knowledge Bases with Consistency Guarantees / 809
Stephen F. Correl, University of Texas at Austin

Probabilistic Learning in Bayesian and Stochastic Neural Networks / 810
William H. Hsu, University of Illinois at Urbana-Champaign

Unified Hardware and Software Models for Smart System Design / 811
Ravi Kapadia, Vanderbilt University

Evaluating the Role of Background Knowledge in Enhancing Knowledge Discovery in Databases / 812
Venkateswarlu Kolluri, University of Pittsburgh
Belief Network Inference in Dynamic Environments / 813
Ole J. Mengshoel, University of Illinois at Urbana-Champaign

Knowledge Lean Word Sense Disambiguation / 814
Ted Pedersen, Southern Methodist University

Dynamic Organization of Search Results Using a Taxonomic Domain Model / 815
Wanda Pratt, Stanford University

Applications of Machine Learning to Information Access / 816
Mehran Sahami, Stanford University

Computing Discourse Information with Statistical Methods / 817
Kenneth B. Samuel, University of Delaware

An Information-Based Approach to Punctuation / 818
Bilge Say, Bilkent University

Layered Learning in Multiagent Systems / 819
Peter Stone, Carnegie Mellon University

**Student Abstracts**

Avoiding Failure via Pre-Planned Responses and Time-Bounded Planning / 821
Ella M. Atkins, Edmund H. Durfee and Kang G. Shin, University of Michigan

Dynamic Prioritization of Complex Agents in Distributed Constraint Satisfaction Problems / 822
Aaron A. Armstrong and Edmund H. Durfee, University of Michigan

An Efficient Heuristic Search in a Large Multi-Agent System / 823
Cheng-Gang Bian, Wen Cao and Gunnar Hartvigsen, University of Tromsø

Summarizing Time-Varying Data / 824
Sarah Boyd, Macquarie University

Efficient Production Match Algorithm and Its Implication for Dynamic Constraint Satisfaction Problems / 825
Bonghan Cho, Paul Rosenbloom and Milind Tambe, University of Southern California

Applying Clustering to the Classification Problem / 826
Piew Datta, University of California, Irvine

Experiments in UNIX Command Prediction / 827
Brian D. Davison and Haym Hirsch, Rutgers University

A Comparison of Model Averaging Methods in Foreign Exchange Prediction / 828
Pedro Domingos, University of California, Irvine

Learning Multiple Models without Sacrificing Comprehensibility / 829
Pedro Domingos, University of California, Irvine
Stratification for Variants of Default Logic / 830
Jörg Ernst, Kiel University and Grigoris Antoniou, Griffith University

Speeding Safely: Multi-Criteria Optimization in Probabilistic Planning / 831
Michael S. Fulkerson, Michael L. Littman and Greg A. Keim, Duke University

Information Routing Using a Corpus Distribution / 832
Jeffrey A. Goldman, University of California, Los Angeles

Althea: Minimalist Representation for Robot Assembly Tasks / 833
Jonathan B. Handler, Northwestern University

Social Comparison for Failure Detection and Recovery in Multi-Agent Settings / 834
Gal A. Kaminka and Milind Tambe, University of Southern California

Smart System Design Using Hybrid Models / 835
Ravi Kapadia, Vanderbilt University

Learning to Play Hearts / 836
Leo Kuvayev, University of Massachusetts

Predicting Resource Use with Case-Based Plan Recognition / 837
Jung-Jin Lee and Robert McCartney, University of Connecticut

Active Learning with Committees / 838
Ray Liere and Prasad Tadepalli, Oregon State University

Development of Iterative Scheduler to Planner Feedback / 839
Charles B. McVey, Ella M. Atkins, Edmund H. Durfee and Kang G. Shin, University of Michigan

A Stochastic Strategy for Multiagent Contracts and the Impact of Deliberation Overhead / 840
Sunju Park and Edmund H. Durfee, University of Michigan

Naive Mixes for Word Sense Disambiguation / 841
Ted Pedersen, Southern Methodist University

On the Discovery of Patterns in Medical Data / 842
Jorge C. G. Ramírez, University of Texas at Arlington and University of Texas Southwestern Medical Center; Lynn L. Peterson, University of Texas at Arlington; Dolores M. Peterson, University of Texas Southwestern Medical Center; Gretchen K. Cormier, Computer Consulting Specialists

Learning Goal-Decomposition Rules Using Exercises / 843
Chandra Reddy and Prasad Tadepalli, Oregon State University

Quantification and Commonsense Reasoning / 844
Walid S. Saba and Jean-Pierre Corriveau, Carleton University

Real-Time Full-Text Clustering of Networked Documents / 845
Mehran Sahami, Salim Yusufali and Michelle Q. W. Baldonado, Stanford University
A Model of Invention / 846
Marin Simina, Ashwin Ram and Janet Kolodner, Georgia Institute of Technology; Michael Gorman, University of Virginia

Modifying Knowledge Bases Using Scripts / 847
Marcelo Tallis and Yolanda Gil, University of Southern California

Noise Sensitivity Analysis for Shape from Focus Methods / 848
Jenn-Kwei Tyan, State University of New York

Analyzing Agents that Learn about Agents / 849
José M. Vidal and Edmund H. Durfee, University of Michigan

Matching Requests for Agent Services with Differentiated Vocabulary / 850
Peter Weinstein and William P. Birmingham, University of Michigan

Innovative Applications of Artificial Intelligence Papers

Deployed Applications

Pimtool, an Expert System to Troubleshoot Computer Hardware Failures / 853
Narendra Dev and Bart Anderson, Hewlett-Packard Company

Case and Constraint-Based Apartment Construction Project Planning System: FASTtrak-APT / 861
Kyoung Jun Lee, Korea Advanced Institute of Science and Technology; Hyun Woo Kim, Hyundai Information Technology, Co. Ltd.; Jae Kyu Lee, Korea Advanced Institute of Science and Technology; Tae Hwan Kim, Hyundai Engineering and Construction, Co., Ltd.; Chang Gon Kim, Hyundai Information Technology, Co. Ltd.; Myoung Kyun Yoon, Eui Jun Hwang and Hyun Jeong Park, Hyundai Engineering and Construction, Co., Ltd.

PST: The Provider Selection Tool / 867
Howard Marmorstein, Jayesh Ghia, Sandeep Sathaye, Akshay Gupta and Eva Baron-Vartian, Oxford Health Plans

Desktop Underwriter: Fannie Mae's Automated Mortgage Underwriting Expert System / 875
David W. McDonald, Fannie Mae; Charles O. Pepe, Brightware, Inc.; Henry M. Bowers, Fannie Mae; and Edward J. Dombroski, The Parallax Corporation

Design of High Performance Help Desk Application and Its Implementation Results / 883
Charles S. Moon, Thomas A. Shore, Gary Brophy and Dennis Koski, IBM Corporation

CREWS_NS: Scheduling Train Crew in The Netherlands / 893

The Scheduling of Rail at Union Pacific Railroad / 903
Kathleen Murphy, Elizabeth Ralston and David Friedlander, Brightware, Inc.; Rodney Swab and Paul Steege, Union Pacific Railroad

SunRay V - An Intelligent Container Trucking Operations Management and Control System / 913
Ian Ng, Andrew Gill, Ian Chia, Mei-Leng Koh and Chris Yeung, Clarity Systems Pte Ltd.; Lih-Wee Chew, Information Technology Institute
DISXPERT: A Social Security Disability Screening Expert System / 919
James R. Nolan, Siena College

STHANA: Profitability Forecast and Situation Analysis for Automated Teller Machines / 926
Cyril Way, iSoft

ChemReg: Using Case-Based Reasoning to Support Health and Safety Compliance in the Chemical Industry / 932
Kirk D. Wilson, Air Products and Chemicals, Inc.

Emerging Applications
The Role of WordNet in the Creation of a Trainable Message Understanding System / 941
Amit Bagga, Joyce Yue Chai and Alan W. Biermann, Duke University

Using a Robot Control Architecture to Automate Space Shuttle Operations / 949
R. Peter Bonasso and David Kortenkamp, NASA Johnson Space Center; Troy Whitney, North Dakota State University

Anyanimation with CATHI / 957
Andreas Butz, DFKI

Automated Generation of Tracking Plans for a Network of Communications Antennas / 963
S. Chien, A. Govindjee, T. Estlin, X. Wang and R. Hill, Jr., Jet Propulsion Laboratory/California Institute of Technology

Building Brains for Rooms: Designing Distributed Software Agents / 971
Michael H. Coen, Massachusetts Institute of Technology

Multimodal Interaction for Distributed Interactive Simulation / 978
Philip R. Cohen, Michael Johnston, David McGee, Sharon Oviatt, Jay Pittman, Ira Smith, Liang Chen and Josh Clow, Oregon Graduate Institute of Science and Technology

ADDVAC: Applying Active Design Documents for the Capture, Retrieval and Use of Rationale during Offshore Platform VAC Design / 986
Ana Cristina Bicharra Garcia, Joper Cezar de Andrade, Rogério Ferreira Rodrigues and Ricardo Moura, Universidade Federal Fluminense

MITA: An Information Extraction Approach to Analysis of Free-Form Text in Life Insurance Applications / 992
Barry Glasgow and Alan Mandell, Metropolitan Life Insurance Company; Dan Binney, Lila Ghemri and David Fisher, Brightware, Inc.

Blackboard Agents for Mixed-Initiative Management of Integrated Process-Planning/Production-Scheduling Solutions across the Supply Chain / 1000
David W. Hildum and Norman M. Sadeh, Carnegie Mellon University; Thomas J. Laliberty and John McAnulty, Raytheon Company; Stephen F. Smith and Dag Kjenstad, Carnegie Mellon University

Intelligent Agents for the Synthetic Battlefield: A Company of Rotary Wing Aircraft / 1006
Randall W. Hill, Jr., Johnny Chen, Jonathan Gratch, Paul Rosenbloom and Milind Tambe, University of Southern California

Information Extraction Based Multiple-Category Document Classification for the Global Legal Information Network / 1013
Richard D. Holowczak and Nabil R. Adam, Rutgers University

xx
An Intelligent Control Architecture for Accelerator Beamline Tuning / 1019
William B. Klein and Carl R. Stern, Vista Control Systems, Inc; George F. Luger and Eric T. Olsson, University of New Mexico

Attitude and Position Control Using Real-Time Color Tracking / 1026
David P. Miller, Anne Wright and Randy Sargent, KISS Institute for Practical Robotics; Rob Cohen and Teresa Hunt, University of Maryland

A Hybrid Architecture for Real-Time Mixed-Initiative Planning and Control / 1032
Steven W. Mitchell, Lockheed Martin Federal Systems, Inc.

Intelligent Command Control for VLSI CAD Systems / 1038
Motohide Otsubo, Satoru Fujita and Toru Yamanouchi, NEC Corporation

A Generic Knowledge-Base Browser and Editor / 1045
Susanne M. Paley, John D. Lowrance and Peter D. Karp, SRI International

Multiple Fault Diagnosis from FMEA / 1052
Chris Price and Neil Taylor, University of Wales

Smokey: Automatic Recognition of Hostile Messages / 1058
Ellen Spertus, Microsoft Research, Massachusetts Institute of Technology, and University of Washington

MultiADD: A Multiagent Active Design Document Model to Support Group Design / 1066
Adriana Santarosa Vivacqua and Ana Cristina Bicharra Garcia, Universidade Federal Fluminense

Rationale-Supported Mixed-Initiative Case-Based Planning / 1072
Manuela M. Veloso, Carnegie Mellon University; Alice M. Mulvehill, BBN; Michael T. Cox, Carnegie Mellon University

IDS: Improving Aircraft Fleet Maintenance / 1078
Rob Wylie, Robert Orchard, Michael Halasz and François Dubé, National Research Council of Canada

Index / 1087
