Phthalocyanine Materials
Synthesis, Structure and Function

Neil B. McKeown
University of Manchester
Contents

Preface xi
Symbols and abbreviations xiii
Summary of phthalocyanine nomenclature xvii

Chapter 1 An introduction to the phthalocyanines 1
1.1 Discovery and structural determination 1
1.2 The use of Pcs as industrial colorants 3
1.3 Metal phthalocyanines (MPcs) 3
1.4 A gift to molecular physics 7
1.5 A brief note on Pc nomenclature 9
1.6 The Pc literature 10

Chapter 2 Phthalocyanine synthesis 12
2.1 The synthesis of unsubstituted Pcs 13
   2.1.1 Metal-free Pc (H_2Pc) 13
   2.1.2 Metal-ion-containing Pcs (MPcs) 14
   2.1.3 Pc sandwich complexes (MPC_2) 15
2.2 Axially substituted Pcs 16
   2.2.1 oxo-Titanium(IV) Pc and related compounds 16
   2.2.2 Axially substituted SiPc, GePc and SnPc 16
2.3 Benzo-substituted Pcs 17
Contents

2.3.1 Tetra-substituted Pcs 18
2.3.2 Peripheral octa(op)-substituted Pcs 20
2.3.3 Non-peripheral octa(onp)-substituted Pcs 22
2.4 Naphthalocyanines (NPcs) 24
2.5 Asymmetrically substituted Pcs 25
2.6 Phthalocyanine polymers 26
   2.6.1 Network polymers 27
   2.6.2 Cofacial (bridged) polymers 28
   2.6.3 Side-chain polymers 30

Chapter 3 The fabrication of phthalocyanine materials 32

3.1 Crystals 32
   3.1.1 The crystal structures of \( H_2\text{Pc} \) and the planar MPcs 33
   3.1.2 The crystal forms of non-planar MPcs 36
   3.1.3 Crystal structures of substituted Pcs 39
3.2 Thin films 41
   3.2.1 Vacuum sublimation 43
   3.2.2 Molecular epitaxial deposition 45
3.3 Langmuir–Blodgett films 47
   3.3.1 Film fabrication 47
   3.3.2 LB film characterisation 50
   3.3.3 LB films from Pcs: a word of caution 50
   3.3.4 LB films from unsubstituted Pc derivatives 51
   3.3.5 Tetra-substituted Pc derivatives 52
   3.3.6 Octa-substituted derivatives 56
   3.3.7 Polymeric LB-film-forming Pcs 57
   3.3.8 General observations on the structure of Pc-derived LB films 57
3.4 Spin-coated Pc films 58
3.5 Electrochemical deposition techniques 60
3.6 Mesomorphic phthalocyanine materials 60
   3.6.1 Mesophase characterisation 62
   3.6.2 Pc mesophases 64
   3.6.3 The number and type of flexible side-chains 65
   3.6.4 The influence of side-chain length 65
   3.6.5 The effects of the linking group and site of substitution 74
   3.6.6 The influence of the central metal ion 77
   3.6.7 The influence of side-chain branching 78
   3.6.8 Non-uniformly substituted Pc mesogens 78
Chapter 4  **Optical properties**  88

4.1  Solution characteristics  88
4.2  Exciton coupling  91
4.3  Structural information from visible absorption spectra of Pc materials  93
4.4  Nonlinear optics  94
   4.4.1  An introduction to nonlinear optics  95
   4.4.2  Pcs as nonlinear optical materials  96
   4.4.3  The outlook for Pcs as NLO materials  99
4.5  Optical data storage  99
4.6  Spectral hole burning  100

Chapter 5  **Electronic conductivity**  101

5.1  A brief description of electronic conductivity in organic materials  102
5.2  Intrinsic electronic conductivity in Pc materials  104
5.3  Conduction in evaporated Pc films  107
5.4  Intrinsic conduction within LB Pc films  109
5.5  The conductivity of undoped polymeric Pcs  110
   5.5.1  The conductivity of polyphthalocyanine (PMPc)  111
   5.5.2  The conductivity of axially bridged polymers  111
5.6  The conductivity of Pc charge-transfer complexes  112
5.7  Partially oxidised polymeric systems  116
   5.7.1  Cofacial Pc polymers  116
   5.7.2  Charge-transfer-complex–polymer composites  117
5.8  Conductivity in columnar Pc liquid crystals  117
5.9  Electronic sensors  119
   5.9.1  Single-crystal studies  120
   5.9.2  Sensors based on sublimed films  120
   5.9.3  Sensors based on polymeric Pc materials  122
   5.9.4  Sensors derived from LB and spin-coated Pc films  122
