## Contents

Preface ........................................ xiii
A note on the exercises ...................... xvi

1 An overview of logic ........................ 1
   1.1 What is logic? .......................... 1
   1.2 Logic in real arguments .................. 2
   1.3 Arguments and deduction ................. 3
   1.4 The logical systems ..................... 3
   1.5 Scientific theories and specifications .... 5
   1.6 Mathematical models .................... 7
   1.7 Limitations of our study ................. 8

2 Propositions and propositional connectives 10
   2.1 Propositions ........................... 11
   2.2 Connectives ............................ 12
   2.3 Ambiguity and imprecision .............. 19

3 Propositional logic as a language ........... 22
   3.1 About formal languages ................. 23
   3.2 Grammar of propositional logic .......... 24
   3.3 The semantics .......................... 28
   3.4 Truth tables ............................ 29
   3.5 Tautologies, contradictions and contingent propositions 30
   3.6 Notations: T vs true and F vs false .... 33
   3.7 Logical equivalence and logical implication .... 35
   3.8 An application: digital circuits ......... 37

4 Transformational proofs ..................... 45
   4.1 Logical laws and how to establish them .... 45
   4.2 The logical laws listed ................. 49
9.6 Theorems in predicate logic 129
9.7 An application: program refinement 133

10 Proof by mathematical induction 141
  10.1 What is mathematical induction? 141
  10.2 Relationship with induction 142
  10.3 The technique of mathematical induction 144
  10.4 An application: algorithm analysis 153

11 Basic set theoretical concepts 163
  11.1 What are sets? 163
  11.2 How to define sets? 164
  11.3 Set equality 166
  11.4 The empty set 167
  11.5 The universal set 167
  11.6 Subsets 168
  11.7 Size of sets 170
  11.8 Power set 171
  11.9 An extended notation for sets 172

12 Operations on sets 174
  12.1 Binary set operations 174
  12.2 Uses of sets 177
  12.3 Set theoretic laws listed 179
  12.4 Set theoretic proofs 181
  12.5 Generalized set operations 183
  12.6 Disjoint sets 185
  12.7 An application: formal system specification 185

13 Relations: basic concepts 195
  13.1 Pairs and tuples 195
  13.2 Cartesian product 196
  13.3 Relations as sets 198
  13.4 Relations as predicates 200
  13.5 Graphical representation of relations 202
  13.6 Domain, range and field 203
  13.7 Inverse relation 204
  13.8 Identity relation 206
  13.9 An application: relational model of databases 207

14 Advanced relational operations 211
  14.1 Relational composition 211
  14.2 Iteration 214
  14.3 An application: relational image 216
14.4 Domain and range restriction and co-restriction 218
14.5 Relational overriding 220

15 Properties of binary relations 224
15.1 Properties of binary relations 225
15.2 Equivalence relations 227
15.3 Partitions and equivalence classes 232
15.4 Relational closures 236

16 Functions and their classification 240
16.1 Functions as relations 241
16.2 Classification of functions 243
16.3 Functions as expressions 251
16.4 Function composition 253
16.5 An application: more on formal system specification 256
16.6 An application: functional programming 261

17 Numbers 273
17.1 Natural numbers 273
17.2 Integers 279
17.3 A tour through other number systems 283
17.4 Dense vs sparse sets 288
17.5 Countability 288
17.6 Numbers in computers 289

18 Sequences and bags 299
18.1 Sequences as sets 299
18.2 Operations on sequences 301
18.3 Bags 304
18.4 Operations on bags 305

19 Boolean algebra 308
19.1 What is Boolean algebra? 309
19.2 Theorems in Boolean algebra 310
19.3 Proof of theorems 312
19.4 Propositional interpretation of Boolean algebra 314
19.5 Set interpretation of Boolean algebra 315
19.6 Significance of Boolean algebra 316

20 Lambda abstraction of functions 317
20.1 Curried functions 317
20.2 Infix operators 318
20.3 Function names 319
20.4 Lambda abstraction 320
20.5 Lambda calculus 322
20.6 Modelling mathematical objects 334

Appendix: Outline answers to exercises 336
