

Volume 32

# Vacuum Ultraviolet Spectroscopy II

*Edited by*

J. A. R. Samson

*Department of Physics and Astronomy  
University of Nebraska  
Lincoln, Nebraska*

*and*

D. L. Ederer

*Physics Department  
Tulane University  
New Orleans, Louisiana*

ACADEMIC PRESS

San Diego London Boston New York Sydney Tokyo Toronto

# CONTENTS

CONTRIBUTORS	xi
VOLUMES IN SERIES	xiii

<b>1. Normal-Incidence Monochromators and Spectrometers</b>	
MASATO KOIKE	
1.1. Concave Grating Monochromators and Spectrometers	1
1.2. Plane Grating Monochromators and Spectrometers	17
References	19
<b>2. Grazing-Incidence Monochromators for Third-Generation Synchrotron Radiation Sources</b>	
H. A. PADMORE, M. R. HOWELLS, and W. R. MCKINNEY	
2.1. Introduction	21
2.2. Grating Theory	23
2.3. Application of Aberration Theory to the Design of an Undulator-Based SGM	33
2.4. Focusing in Variable-Included-Angle Monochromators	43
2.5. Diffraction Efficiency	46
2.6. An Optimized Beam Line for Microscopy by Photoelectron Emission Microscopy and Micro-X-Ray Photoelectron Spectroscopy	47
References	52

### 3. Spectrographs and Monochromators Using Varied Line Spacing Gratings

JAMES H. UNDERWOOD

3.1. Limitations of Uniformly Spaced Grating Instruments	55
3.2. Paraxial Focusing Equations for VLS Gratings	56
3.3. Harada-Style Focusing	58
3.4. Hettrick-Style Focusing	60
3.5. Flat Field Spectrographs and Spectrometers	62
3.6. Light Path Function for a System of a Mirror and a VLS Grating	65
3.7. Monochromators for Synchrotron Radiation	66
3.8. Holographically Recorded Gratings	70
3.9. Conclusions	70
References	70

### 4. Interferometric Spectrometers

ANNE P. THORNE and MALCOLM R. HOWELLS

4.1. Introduction	73
4.2. Fabry-Perot Interferometry	77
4.3. Fourier Transform Spectrometry: Principal Features	80
4.4. Fourier Transform Spectrometry in Practice in the VUV	87
4.5. Spatially Heterodyned, Nonscanning Interferometers for FTS	93
4.6. All-Reflection FT Spectrometers	97
4.7. Soft X-Ray FTS by Grazing Reflection	99
References	105

### 5. Gas Detectors

J. B. WEST

5.1. Ionization Chambers	107
5.2. Proportional Counters	112
References	115

<b>6. Photodiode Detectors</b>	
L. R. CANFIELD	
6.1. Introduction	117
6.2. Radiometric Standards	118
6.3. Photodiode Types	119
6.4. Proper Use of Photodiodes in the VUV	134
References	137
<b>7. Amplifying and Position Sensitive Detectors</b>	
OSWALD H. W. SIEGMUND	
7.1. Photon Detection	139
7.2. Amplifying Detectors	148
7.3. Position Sensing Techniques	162
References	172
<b>8. Absolute Flux Measurements</b>	
S. V. BOBASHEV	
8.1. Introduction	177
8.2. Primary Radiator Radiometry	178
8.3. Primary Detector Radiometry	179
8.4. Transfer Detector Standards for Absolute Flux Measurement	186
8.5. Conclusion	189
References	190
<b>9. Vacuum Techniques</b>	
ROGER L. STOCKBAUER	
9.1. Introduction	193
9.2. Design of the Vacuum Environment	193

9.3. Leak Detection	200
9.4. Optics Cleaning	202
References	203
<b>10. Lithography</b>	
YULI VLADIMIRSKY	
10.1. Integrated Circuit Fabrication and Lithographic Process	205
10.2. Photoresist in Lithography	206
10.3. Optical Lithography	208
10.4. X-Ray Lithography	214
References	221
<b>11. X-Ray Spectromicroscopy</b>	
HARALD ADE	
11.1. Introduction	225
11.2. X-Ray Spectromicroscopy Approaches	230
11.3. Applications	239
11.4. Discussion	256
11.5. Conclusions	257
References	258
<b>12. Optical Spectroscopy in the VUV Region</b>	
MARSHALL L. GINTER and KOUICHI YOSHINO	
12.1. Introduction	263
12.2. Wavelength Measurements and Energy Levels	265
12.3. Intensity Measurements and Cross Sections	270
References	275

**13. Soft X-Ray Fluorescence Spectroscopy**

THOMAS A. CALLCOTT

13.1. Introduction	279
13.2. Characteristics of the Soft X-Ray Fluorescence Spectra of Solids	282
13.3. Instrumentation for SXF Spectroscopy	293
13.4. Survey of Recent SXF Spectroscopy Research	297
References	298
