TABLE OF CONTENTS

Preface xi

Participants of the 4th Conference on Clifford Algebras xiii

Program of the 4th Conference on Clifford algebras xxvii

Th. Ackermann,
Dirac Operators and Clifford Geometry - New Unifying Principles in Particle Physics? ................................. 1

M.B. Balk and M.Ya. Mazalov,
On the Hayman uniqueness problem for polyharmonic functions .......................................................... 11

S. Bernstein,
Left-linear and Nonlinear Riemann problems in Clifford analysis ......................................................... 17

J. Bureš,
Spin structures and harmonic spinors on nonhyperelliptic Riemann surfaces of small genera ....................... 31

P. Cerejeiras,
Decomposition of analytic hyperbolically harmonic functions 45

J.S.R. Chisholm and R.S. Farwell,
Spin Gauge Theories: A Summary ................................. 53

J. Cnops,
Manifolds with and without embeddings .......................... 57

C. Daviau,
Dirac equation in the Clifford algebra of Space ............... 67

B. Fauser,
Dirac theory from a field theoretic point of view ............... 89

K. Gürlebeck,
On some applications of the biharmonic equation ........... 109
D. Hestenes,  
Spinor Particle Mechanics ............................................. 129

U. Kähler,  
Clifford analysis and elliptic boundary value problems  
in unbounded domains .................................................. 145

J. Keller,  
Twistors and Clifford Algebras ...................................... 161

V.V. Kisil,  
How Many Essentially Different Function Theories Exist? ... 175

W. Haussmann and O.I. Kounchev,  
Variational Property of the Peano Kernel for Harmonicity  
Differences of Order $p$ ................................................ 185

P. Van Lancker,  
Clifford Analysis on the Sphere ...................................... 201

J. Lawrynowicz,  
Type-changing transformations of pseudo-Euclidean  
Hurwitz pairs, Clifford Analysis, and particle lifetimes ...... 217

Th. Hempfling and H. Leutwiler,  
Modified quaternionic analysis in $\mathbb{R}^d$ ...................... 227

H. Li,  
Geometric Algebra and Lobachevski Geometry ..................... 239

H.R. Malonek,  
Generalizing the (F,G)- derivative in the sense of Bers ...... 247

A. Micali,  
Formes quadratiques de Hardy-Weinberg et algèbres de  
Clifford ................................................................. 259

D. Miralles,  
On Dirac equations in curved space-times ......................... 267

E. Obolashvili,  
Some Partial Differential Equations in Clifford Analysis ...... 275

J.M. Parra,  
Teaching Clifford Algebra as Physical Mathematics .......... 291

W.M. Pezzaglia Jr.,  
Polydimensional Relativity, a Classical Generalization of  
the Automorphism Invariance Principle ............................. 305

W.A. Rodrigues Jr. and J. Vaz Jr.,  
Subluminal and Superluminal Electromagnetic Waves  
and the Lepton Mass Spectrum ....................................... 319

S. Somaroo,  
Higher Spin and the Spacetime Algebra ............................. 347

F. Sommen,  
Curved Radon Transforms in Clifford Analysis ................... 369
W. Sprössig,
On a class of non-linear boundary value problems ........... 383

M. Cahen, S. Gutt and A. Trautman,
Pin structures and the Dirac operator on real projective
spaces and quadrics ........................................... 391

J. Vaz Jr.,
Construction of monopoles and instantons by using
spinors and the inversion theorem ......................... 401

K.P. Wojciechowski, S.G. Scott, G. Morchio and B. Booss-Bavnbek,
Determinants, Manifolds with Boundary and
Dirac Operators .................................................. 423

R. Yamaleev,
New dynamical equations for many particle system
on the basis of multicomplex algebra ....................... 433
