Contemporary Instrumental Analysis
CONTENTS

Preface xviii
About the Authors xx

CHAPTER 1

Preliminaries

1.1 Introduction 3
1.2 Some Definitions  3
   Identification, Determination, Analysis, Assay, Quantitation, and Analyte 3
   Validation 4
   Methods, Protocols, and Techniques 4
1.3 Solving a Problem 4
1.4 A Brief Review of Basic Measures 8
   Atomic Mass 8
   Mole 9
   Prefix Notation 9
1.5 Measures ofComposition: Units of Content 10
   Weight-to-Weight Measures 10
   Weight-to-Volume Measures 11
   Number-to-Volume Measures 12
   Volume-to-Volume Measures 13
   The pH and Other Logarithmic Scales 13
1.6 Experiments and Mathematical Equations 13

Suggestions for Further Reading 15 • Concept Review 16
Exercises 16

CHAPTER 2

Statistical Tests and Error Analysis

2.1 Introduction 19
2.2 Finding Errors 19
   A Simple Analysis by Chromatography 19
   Am I at Least in the Ballpark? 20
2.3 Measuring Errors 20
2.4 Absolute and Relative Measures 23
2.5 Precision and Accuracy 24
2.6 Random Errors and the Normal (Gaussian) Distribution 25
   Properties of Gaussian Distributions 28
2.7 The Confidence Limit 29
   Confidence Limits when \( \sigma \) Is Known 29
   Confidence Limits when \( \sigma \) Is Unknown 30
2.8 Standards, Blanks, and Accuracy 32
Sample Treatment, Interferences, and Standards

4.1 Sample Preparation 91
4.2 Maximize Recovery 92
  Loss of Analyte 93
  Correction for Loss of Analyte 95
4.3 Optimize the Chemical Form 96
  Working Directly with Solid Samples 96
  Adding or Removing Heat 96
  Dissolution 97
  Digestion 97
  Integrated Vaporization 100
4.4 Minimize the Interferences 101
  Extraction 102
  Dialysis 107
  Precipitation and Flotation 107
  Purge and Trap 109
4.5 Optimize the Concentration 109
4.6 Calibration and Standards 111
4.7 Types of Standards 112
  External Standards 112
  Added Standards 114

A DEEPER LOOK
4A The Basis of Ultrasound-Assisted Dissolution and Digestion 118
4B Microwave-Assisted Sample Preparation 119
4C Supercritical Fluid Extraction 122
4D Purge and Trap 123
4E Flow Injection Analysis 126
4F Standard Reference Materials 128
  Definitions 130

Suggestions for Further Reading 130  •  Concept Review 132
Exercises 132
Case 3: Micro-Organic Analysis 148
Case 4: A Solid and the Distribution of Elements in Its Structure 149

5.5 Signals, Noise, and Detection Limits 150
5.6 Figures of Merit and the Detection Limit 152
  Comparing Detection Limits 153
5.7 The Limit of Detection in More Detail 154

Suggestions for Further Reading 158 • Concept Review 158
Exercises 158

CHAPTER

Electronics and Noise

6.1 Introduction 163
6.2 DC Current, Voltage, and Resistance 164
6.3 Power 165
6.4 Kirchhoff’s Laws 166
  Resistors in Series: Voltage Dividers 167
  Resistors in Parallel 169
  Wheatstone Bridge Circuit: Resistors Combined in Series and
  in Parallel 169
6.5 Time-Dependent Responses of Circuits 171
6.6 Signal-to-Noise Ratios 174
6.7 Types of Noise 175
  Thermal Noise 176
  Shot Noise 178
  1/f Noise 179
  Electrical Interference 179
6.8 Amplifiers and Amplification 180
  A Few Common Operational Amplifier Circuits 182
6.9 Detection Limit with a Multichannel Detector 187

A DEEPER LOOK
6A Schematic Symbols in Electronics 188
6B A Brief Introduction to the Nomenclature
  of Digital Logic 189
  A Flip-Flop Network 191
  The D-block Latch 192
  A Binary Counter 195
6C Capacitors, Inductors, and
  Alternating Current (AC) 196
  Capacitors and AC 196
  Inductors and AC 198
  LC Circuits and Resonance 199

Suggestions for Further Reading 201 • Exercises 202
CHAPTER 7

Electrochemical Methods

7.1 The Variety of Electrochemical Methods 205
7.2 A Review: Electrochemical Potentials and the Nernst Equation 205
   Chemical Activities 205
   The Nernst Equation 206
   Concentration Cells 208
   pH and the Electrochemical Potential 208
   The Formal Potential 209

7.3 Toward Measurements 211
   How an Inert Electrode Senses the Potential of a Redox Couple 211
   The Experimental Measurement 213

7.4 Potentiometry and Ion-Selective Electrodes 215
   Reference Half-Cells 215
   Ion-Selective Interfaces and Ion-Selective Electrodes 217
   Range of Response of Ion-Selective Electrodes 222
   Ion-Selective Field-Effect Transistors 223
   Interferences and Ion-Selective Electrodes 224
   Potentiometric Precision 226

7.5 Electrochemical Methods Using Current Flow 226
   Behavior of an Electrochemical Cell with an Applied Potential 226
   The Linear Region 227
   The Nonlinear Region 228
   Kinetic Overpotential 229

7.6 Three-Electrode Potentiostat 231

7.7 Conductimetry 233
   Conductivity and Ionic Concentration 234
   Conductimetry in Practice 235

7.8 Coulometry 238
   Background Currents: Competitive Electrolysis 240
   Coulometric Titrations 242

7.9 Amperometry 243
   Fixed-Potential Amperometry: Amperometric Titrations 244
   The Two-Electrode System 244
   "One-Electrode" System 247
   Chromatography/Amperometry 248

7.10 Voltammetry 248
   DC Polarography and the Dropping Mercury Electrode 250
   Pulsed Voltammetry 250
   Differential Pulse Voltammetry 254
   Cyclic Voltammetry 255

7.11 Stripping Voltammetry 258

A DEEPER LOOK

7A Notation for Electrochemical Cells 260
7B How Selectivity Coefficients Are Determined 263
Introduction to Spectrometry

8.1 Spectrometry, from Radiofrequency to $\gamma$-Rays 275
8.2 Review of Energy, Wavelength, Frequency, and Temperature 276
8.3 The Transformations of Light Energy 280
   Spectrometric Names 281
8.4 Spectral Purity and Spectral Resolution 282
   Monochromators and Polychromators in the Optical Range 284
   Bandwidth and Spectral Slit Width 285
   Resolution 285
8.5 Measurement of Spectra 286
8.6 Light Scattering 289
   Geometry of Scattering 289
   Elastic Scattering Origins and Behavior 290
   Inelastic Scattering 291
8.7 Emission Spectrometry 292
8.8 Absorption Spectrometry 293
   Absorbance and Concentration 295
   Absorbance, Concentration, and Precision 296
   Spectral Resolution and Error in Concentration Measurements 297
   Sample Cells and Solvents 298
   Other Limits to Photometric Precision 299
8.9 Fluorescence/Phosphorescence Spectrometry 301
   Comparisons of the Methods 304
8.10 Spectral Interference and the Spectra of Mixtures 305
   Background Correction 307
   Quantifying Two Species with Spectral Interference Present 308
8.11 Chemical Interference 311
   Isosbestic Points 311
8.12 Instrument Interference 312
8.13 Total Internal Reflection and Fiber Optics 314
   Attenuated Total Reflection 317
8.14 Diffuse Reflectance Spectrometry 321
8.15 Derivative Spectrometry 325

A DEEPER LOOK
8A Wavelength Separation: Interference, Diffraction, Gratings, and Filters 326
   Constructive and Destructive Interference of Two Stationary Waves 327
## Contents

- Two-Slit Diffraction 328
- Multislit Diffraction 329
- Gratings 330
- Grating Monochromators 333
- Interferometers 334

8B Sources of Electromagnetic Radiation: 190 nm to 50 μm 335
- Lasers and Laser Safety 335
- The Ultraviolet Region, 190 to 320 nm: Deuterium, Xenon, and Mercury Arcs 335
- The Visible Region, 320 to ~750 nm: Tungsten Filament Lamps 337
- The Infrared Region, 2.5 to 50 μm: Nernst Glower 339

8C Representative Transducers for Electromagnetic Radiation 339
- Rectifiers for Radiofrequency 339
- Infrared Devices 340
- Phototubes and Photomultipliers 341
- CCDs and CIDs 343
- X-ray and Gamma Detectors 345

8D Derivation of the Beer-Lambert Law 346
- Luminescence and its Dependence on Concentration 348

8E The Nomenclature of Molecular Absorption and Luminescence 349

Suggestions for Further Reading 353 • Exercises 354

### Chapter 9

Spectrometry for Elemental Analysis

- 9.1 Atomic Spectrometry 363
- 9.2 Nomenclature of Atomic Spectrometry 363
- Spectra and Spectral Notation 364
- 9.3 Intensities and Linewidths of Gas Phase Atomic Spectra 366
- Linewidth Dependence on Temperature and Pressure 366
- Simultaneous Emission and Absorption and Lineshape Changes 367
- 9.4 Factors Affecting Atomization/Ionization 370
- Solid Samples 370
- Atoms or Ions? 371
- Liquid Samples 373
- Gaseous Samples 375
- 9.5 Isolated Atoms or Ions from Samples 376
- Furnaces 376
- Plasmas 377
- Flames 380
- 9.6 Causes of Spectral Interferences in Gases 380
- 9.7 Atomic Emission Methodology 383
- 9.8 Atomic Absorption Methodology 385
- The Light Source in Atomic Absorption 386
- 9.9 Background Correction 389
- 9.10 Bulk Analysis Without Atomization 392
9.11 X-ray Methods of Analysis 392
   Nomenclature of X-ray Radiation 392
   Absorption of X-rays 393
   Mass Absorption Coefficients 397
   Spurious Peaks and Anomalous Fluorescence Intensities 399
   Proton-Induced X-ray Fluorescence (PIXE) 399

9.12 Neutron Activation Analysis 400

9.13 Furnace or Plasma? Absorption or Emission?
   Optical, X-ray, γ-ray? Which to Use? 404

9.14 Surface-Sensitive Spectrometries 406

9.15 Photoelectron and Auger Spectroscopies 409
   Electrons Emitted from Samples 409
   Which Electrons Are Emitted? 411
   Auger Emission Spectrometry (AES) 412
   Auger Nomenclature 415

9.16 Rutherford Backscattering 416

A DEEPER LOOK

9A Emission and Absorption Spectra and the
Boltzmann Distribution 419
   Temperature Fluctuations and Noise 423

9B Doppler Spectroscopic Line Broadening 424

9C Wavelength-Dispersive X-ray Spectrometers (WDX) 427

9D Energy-Dispersive X-ray Spectrometers (EDX) 429

9E Electron Spectrometers 430

Suggestions for Further Reading 432 • Exercises 433

CHAPTER

Infrared and Raman Spectrometries: Vibrational Spectrometries

10.1 Introduction 439
   Infrared Spectra 439

10.2 Vibrational Frequencies 441

10.3 Normal Vibrational Modes 445

10.4 Qualitative Information from IR Spectra 448

10.5 Raman Spectra 452

10.6 Samples for Infrared and Raman Spectrometries 455
   Samples for Infrared Spectrometry 455
   Samples for Raman Spectrometry 456

10.7 Band Intensities of Vibrational Spectra 458

10.8 Quantitation 461

10.9 Infrared and Raman Microspectrometry 462

A DEEPER LOOK

10A Raman Spectrometers 463

10B Characteristic Frequencies 466

Suggestions for Further Reading 472 • Exercises 472
CHAPTER 11
Nuclear Magnetic Resonance Spectrometry

11.1 Introduction 477
11.2 General Principles of NMR 477
   Signal Magnitude and Concentration 480
11.3 Chemical Shifts: Origins and Values 482
   Origin of $\sigma$, the Shielding Parameter 482
11.4 Nuclear Equivalence and Inequivalence 486
11.5 Nuclear Spin–Nuclear Spin Interaction 487
   The Heights and Areas of Split Peaks 490
   General Splitting Patterns 491
   Some Complications 493
   Splitting by More Than One Set of Equivalent Nuclei 496
   Spin-Spin Splitting from Nonresonant Nuclei 499
11.6 $^{13}$C-NMR 499
11.7 Quantitation 501
11.8 NMR of Solids 504
11.9 Multidimensional NMR 505

A DEEPER LOOK
11A NMR Instruments and Samples 507

Suggestions for Further Reading 510 • Exercises 511

CHAPTER 12
Mass Spectrometry

12.1 Introduction 515
12.2 Mass Spectra and the Mass-to-Charge Ratio 518
12.3 Analysis of Organic-Molecule Mass Spectra 518
   Identify the Molecular Ion 519
   Study the Isotope Distribution Patterns 520
   Explain the Fragmentation Patterns 523
12.4 Mass Spectral Resolving Power and Spectral Resolution 525
12.5 Exact Masses and Chemical Formula Determination 526
12.6 Sequential Mass Spectrometry: MS/MS 528
12.7 Separations/Mass Spectrometry 529
12.8 High-Mass Mass Spectrometry 533
12.9 Spatial Distribution by Mass Spectrometry 536
12.10 The Variety of Ion Sources 540
   Common Factors in Ion Sources: Stability, Control of Ion Motion 540
   Electron Ionization (EI) and Chemical Ionization (CI) 542
   Electrospray (ES, ESI) 543
   Inductively Coupled Plasma Source (ICP) 548
   Pulsed-Laser-Based Sources 550
   Fast-Atom Bombardment (FAB) 550
Contents xiii

Ion Impact Desorption/Ionization: SIMS, Plasma Desorption, Glow Discharge, Sputtered Neutrais 552
Thermal Ionization 555

12.11 Mass Analyzers for Mass Spectrometry 555
Magnetic Sector 556
Double Sector 556
Quadrupole Mass Filter 557
Quadrupole Ion Trap 559
Time-of-Flight 560
Fourier Transform Mass Spectrometry (Fourier Transform Ion Cyclotron Resonance) 562

12.12 High-Precision Analyses by Mass Spectrometry: Isotope Dilution 565
The Equation of Mass Spectral Isotope Dilution Analysis 566

A DEEPER LOOK

12A Natural Isotopic Abundances 568

Suggestions for Further Reading 569 • Exercises 570

CHAPTER

13 General Introduction to Separations and Chromatography

13.1 The Chromatography Experiment 577
13.2 Nomenclature of Chromatographic Separations 579
13.3 Descriptions of Experimental Chromatograms 580
13.4 Parameters of Chromatography 581
Parameters for Individual Bands 582
Efficiency 583
Parameters Describing Pairs of Bands 584
Comparing Column Efficiencies 587
Mass Resolution versus Peak Resolution 587
13.5 Quantitation in Chromatography 589
Loss of Material on the Column 589
Detector Response 590
Quantitation Techniques 590
13.6 Explaining Chromatographic Separations 592
Extractions 592
Sample Loading 593
$K_D$ and Elution Times 594
A More Complete Model 596
13.7 Zone Broadening: The van Deemter Equation 598
Zone Broadening in More Detail 601
The Broadening Process Accounted for by $B/\bar{u}$ 601
The Broadening Process Accounted for by $C\bar{u}$ 602
Packing of the Stationary Phase and the $A$-term 604
13.8 Improving Separations 606
Varying $N$ by Changing the Flow Rate 607
Chapter

Liquid Chromatography

14.1 Types of Liquid Chromatography 629
14.2 Normal-Phase Liquid Chromatography 630
14.3 Reversed-Phase Liquid Chromatography 633
14.4 Ion-Exchange Liquid Chromatography (Ion Chromatography) 636
  Ion Chromatography 638
  Ion-Pairing Chromatography 641
14.5 Size-Exclusion Liquid Chromatography 641
14.6 Chiral Separations 644
14.7 Gradients 645
14.8 Effects of Temperature 648
14.9 Particle Size, Column Size, Pressure, and HETP 650
14.10 Detectors for Column LC 653
  UV-Visible Adsorption Detectors 654
  Fluorescence Detectors 656
  Differential Refractive Index Detector 656
  Amperometric Detector 658
  Conductivity Detector 659
  Evaporative Light Scattering (ELS) 659
  Light Scattering in Liquids 661
  Viscometric Detector for Polymer Solutions 662
14.11 Batch Separations 663
14.12 Planar Chromatography 664
  High-Performance Thin-Layer Chromatography 664
  Detection and Quantitation for TLC 666

Suggestions for Further Reading 668 • Exercises 669
15.1 Comparison between Gas, Supercritical Fluid, and Liquid Chromatographies 673
15.2 The Nomenclature of Gas Chromatography 674
15.3 Samples Analyzed 675
15.4 Sample Introduction, Splitters, and Columns 676
15.5 Detectors for Gas Chromatography 686
15.6 Supercritical Fluid Chromatography 694

A DEEPER LOOK
15A Stationary Phases for Gas Liquid Chromatography: Classification Schemes 696
15B Optimization of Gas Chromatography Separations 701

Suggestions for Further Reading 705 • Exercises 705

16.1 The Basis of Electroseparations 709
16.2 Negative, Neutral, or Positive? 711
16.3 Electrophoretic Separations within a Gel Matrix 713
The Gels 713
Some Modes of Operation 715
Improving the Resolution 716

16.4 Some Detection Methods for Gel Electrophoresis 717
16.5 Isoelectric Focusing 720
16.6 Capillary Electrophoresis 721
   Temperature Differences and Convection 722
   Electroosmotic Flow in Capillaries 724
   Efficiency 727
   Resolution 728
   Sample Injection 728
   Modes of Operation 729
   Detection 729
16.7 Micellar Electrokinetic Capillary Chromatography 730
16.8 Ion Mobility Spectrometry 733

A DEEPER LOOK
16A The Origin of Electroosmotic Flow 736

Suggestions for Further Reading 737 • Exercises 738

17.1 Digitization 741
   Resolution 741
   Least and Most Significant Bits 744
17.2 Signal Averaging 746
17.3 Time and Frequency: How Often to Sample the Voltage 748
   Eliminating Aliasing with Filters 749
   When an Anti-Aliasing Filter Is Not Needed 751
17.4 Time and Frequency: How They Are Related 752
   Adding Together and Extracting Sine Waves 753
   Mathematical Preliminaries: Fourier Transforms 755
   Complex Variables: A Convenient Shorthand Notation 756
   The Inverse Transform 757
17.5 Frequencies, Filters, and Aliasing 757
17.6 Digression on the Characteristics of Noise in Spectrometry 759
   Fluctuation Noise ($\propto I$) and Photon Emission Noise ($\propto I^{1/2}$) 761
   Multichannel is Not Multiplex 762
   A Simple Example of Multiplexing 762
   Multiplexing in Infrared Spectrometry 763
   Spectral Elements 763
   Distributions of Noise 765
   How to Get Enough Signal 765
17.7 Some Instrument Principles 767
   Power Brought to the Detector 767
   "Instantaneous" Collection of Spectra 768
   Resolution, S/N, and Data Collection Time 768
   Sampling Time, Digital Resolution, and Spectral Range 769
17.8 The Experimental Uses of Fourier Transforms 773
   FT-NMR  773
   FT-Mass Spectrometry  775
   FT-IR  777
   Digital Resolution and the Maximum Retardation  780
   The Throughput Advantage  780
   The Multiplex Advantage  780
   Precautions  781

A DEEPER LOOK
17A The Phasor Representation of Voltage  781
17B The Fourier Transform of a Transient Signal  783
   Apodization (Windowing)  785

Suggestions for Further Reading 786 • Exercises 786

C H A P T E R

Kinetic Methods

18.1 The Chemistries of Kinetic Analyses 789
18.2 Why Kinetic Methods?  789
18.3 A Brief Review of the Mathematics of Rates of Reactions, Decay
   Times, and Half-Lives  790
18.4 Assay Kinetics and Assay Types  794
   The Catalytic Method  795
   The Direct Method  796
18.5 Methods for Determining $[A]_0$ or $k_{\text{catalytic}}$ from Rates  796
   The Derivative Method  797
   Fixed-Time Method  798
   Variable-Time Method  800

A DEEPER LOOK
18A Obtaining Simple Kinetic Behavior  802
   Pseudo First-Order Behavior  803
   Pseudo Zero-Order Behavior  804

Suggestions for Further Reading 804 • Concept Review 805 • Exercises 805

Appendices 808
Answers 828
