CONTENTS

Preface

Superconducting Tunnel Junction Radiation Detectors in the Light of a Fruitful Research Cooperation

Nb-Based Tunnel Junction as a Key Technology for Radiation Detection

Review of Series-Connected Superconducting Tunnel Junction Detectors and Their Future Perspectives

Fabrication of High Quality Superconducting Tunnel Junctions

X-ray Detection Characteristics of Nb-Based Superconducting Tunnel Junctions

Josephson Effect and Radiation Detection

Large-Area Tunnel Junction Exhibiting Two Operating Modes for X-ray Detection

Role of Special Junction Configurations in the Detection Performances

Characterization of Superconducting Tunnel Junction X-ray Detectors by Low Temperature Scanning Electron Microscopy

Radiation Hardness of Josephson Devices

Quantitative Evaluation of the Quantum Efficiency of a Superconducting Tunnel Junction with the Multiple Scattering Process Model of Primary Photoelectrons

Cryogenic Semiconductor Electronics

Injection-Detection Experiments to Study Diffusion Processes in Nb film using a Three Terminal in-plane Superconducting Double-Tunnel Junctions

Superconducting Tunnel Junctions as General Purpose Detectors

Series Array of Superconducting Tunnel Junctions as Phonon Sensor in a Dark Matter Detector

Author Index
