Chapter 1 Theoretical Bases of the Optical Properties of Semiconductor Quantum Nano-Structures

Mitsuru Sugawara

I. INTRODUCTION 1
II. ELECTRONIC STATES OF SEMICONDUCTOR QUANTUM NANO-STRUCTURES 3
III. INTERBAND OPTICAL TRANSITION 11
   1. Linear and Nonlinear Optical Susceptibility 12
   2. Spontaneous Emission of Photons 21
   3. Rate Equations for Laser Operations 27
IV. EXCITON OPTICAL PROPERTIES 30
   1. State Vectors 32
   2. Effective-Mass Equations 36
   3. Exciton–Photon Interactions 43
   4. Optical Absorption Spectra 47
   5. Spontaneous Emission of Photons in Quantum Wells and Mesoscopic Quantum Disks 55
   7. The Coulomb Effect on Optical Gain Spectra 77
V. QUANTUM-DOT LASERS 83
   1. The Effect of Carrier Relaxation Dynamics on Laser Performance 86
   2. Effect of Homogeneous Broadening of Optical Gain on Lasing Emission Spectra 95
   3. Bi-Exciton Spontaneous Emission and Lasing 97
VI. SUMMARY 107
APPENDIX 107
REFERENCES 112
Chapter 2 Molecular Beam Epitaxial Growth of Self-Assembled InAs/GaAs Quantum Dots

Yoshiaki Nakata, Yoshihiro Sugiyama, and Mitsuru Sugawara

I. INTRODUCTION .................................................. 117
II. THE STRANSKI-KRASTANOW GROWTH MODE ............... 119
   1. Energy-Balance Model for Island Formation ............. 119
   2. InAs Island Growth ........................................ 121
   3. Multiple-Layer Growth and Perpendicular Alignment of Islands ................. 125
   4. In-Plane Alignment of Islands .................................. 130
III. CLOSELY STACKED InAs/GaAs QUANTUM DOTS ............... 132
   1. Close Stacking of InAs Islands .............................. 133
   2. Photoluminescence Properties ............................. 137
   3. Zero-Dimensional Exciton Confinement Evaluated by Diamagnetic Shifts ....... 140
IV. COLUMNAR InAs/GaAs QUANTUM DOTS ......................... 143
V. SUMMARY ..................................................... 150
ACKNOWLEDGMENTS .............................................. 151
REFERENCES ....................................................... 152

Chapter 3 Metalorganic Vapor Phase Epitaxial Growth of Self-Assembled InGaAs/GaAs Quantum Dots Emitting at 1.3 \mu m

Kohki Mukai, Mitsuru Sugawara, Mitsuru Egawa, and Nobuyuki Ohtsuka

I. INTRODUCTION .................................................. 155
II. ATOMIC LAYER EPITAXIAL GROWTH .......................... 157
III. ALTERNATE SUPPLY GROWTH OF InGaAs DOTS BY In-As-Ga-As SEQUENCE ......... 160
IV. ALTERNATE SUPPLY GROWTH OF InGaAs DOTS BY THE In-Ga-As SEQUENCE ........... 166
   1. Two Types of ALS Dot ...................................... 168
   2. Multiple-Layer Growth ...................................... 172
V. THE GROWTH PROCESS .......................................... 176
VI. SUMMARY ..................................................... 180
REFERENCES ....................................................... 181

Chapter 4 Optical Characterization of Quantum Dots

Kohki Mukai and Mitsuru Sugawara

I. INTRODUCTION .................................................. 183
II. LIGHT EMISSION FROM DISCRETE ENERGY STATES ........... 185
   1. Photoluminescence, Photoluminescence Excitation, and Electroluminescence Spectra ....................... 185
   2. Wafer Mapping .............................................. 190
   3. Microprobe Photoluminescence ............................. 192
III. CONTROLLABILITY OF QUANTUM CONFINEMENT ............... 196
   1. Two Methods of Controlling Quantized Energies .......... 196
   2. Magneto-Optical Spectroscopy .............................. 200
IV. RADIATIVE EMISSION EFFICIENCY ............................. 201
V. SUMMARY ..................................................... 207
REFERENCES ....................................................... 208
Chapter 5  The Photon Bottleneck Effect in Quantum Dots
Kohki Mukai and Mitsuru Sugawara

I. INTRODUCTION ............................................. 209
II. A MODEL OF THE CARRIER RELAXATION PROCESS IN QUANTUM DOTS ...... 211
III. EXPERIMENTS ON LIGHT EMISSION AND CARRIER RELAXATION IN QUANTUM-DOT DISCRETE ENERGY LEVELS ................................................................. 214
   1. Electroluminescence Spectra .................................. 215
   2. Time-Resolved Photoluminescence .......................... 217
   3. Simulation of Electroluminescence Spectra ................ 225
IV. INFLUENCE OF THERMAL TREATMENT ......................... 229
   1. Change in Emission Spectra after Annealing .............. 229
   2. Competition between Carrier Relaxation and Recombination .... 231
V. SIMULATION OF LASER PERFORMANCE INCLUDING THE AUGER RELAXATION PROCESS ................................................................. 235
VI. SUMMARY .................................................. 237
REFERENCES ..................................................... 238

Chapter 6  Self-Assembled Quantum Dot Lasers
Hajime Shoji

I. INTRODUCTION ............................................. 241
II. FUNDAMENTAL PROPERTIES OF QUANTUM-DOT LASERS ..................... 243
   1. Gain Characteristics ....................................... 244
   2. Threshold Current ....................................... 246
   3. Dynamic Characteristics ................................... 248
III. FABRICATION OF SELF-ASSEMBLED QUANTUM-DOT LASERS ..................... 249
   1. Fabrication ............................................... 250
   2. Device Characteristics .................................... 255
   3. Limiting Factors of Laser Performance ..................... 267
IV. KEY TECHNOLOGIES FOR THE NEXT ERA .............................. 269
   1. Closely Stacked Quantum-Dot Lasers ....................... 270
   2. Columnar Quantum-Dot Lasers .............................. 273
   3. Long-Wavelength Quantum-Dot Lasers ..................... 276
   4. Quantum-Dot Vertical-Cavity Surface-Emitting Lasers ....... 279
V. CONCLUSION ................................................ 282
ACKNOWLEDGMENTS .............................................. 283
REFERENCES ..................................................... 283

Chapter 7  Applications of Quantum Dot to Optical Devices
Hiroshi Ishikawa

I. INTRODUCTION ............................................. 287
II. PROPERTIES OF QUANTUM DOTS ................................ 288
   1. The Quantum Dot as a Two-Level System .................... 288
   2. Attractive Features of Quantum Dots for Device Application .. 294
III. QUANTUM DOTS FOR VERY HIGH SPEED LIGHT MODULATION ............. 295
   1. The Need for High-Speed, Low-Wavelength-Chirp Light Sources . 295
## CONTENTS

2. Direct Modulation of Quantum-Dot Lasers ........................................ 298
3. The Quantum-Dot Intensity Modulator .............................................. 302

IV. QUANTUM DOTS AS A NONLINEAR MEDIUM ........................................ 303
1. The Need for Large Nonlinearity with a Large Bandwidth .................... 303
2. Analysis of $\chi^{(3)}$ .......................................................... 306
3. Discussion ........................................................................ 311

V. PERSISTENT HOLE BURNING MEMORY .............................................. 314
1. Persistent Spectral Hole Burning Memory Using Quantum Dots ............ 314
2. Experimental Results .......................................................... 316
3. Discussion ........................................................................ 319

VI. SUMMARY AND PERSPECTIVES ON QUANTUM-DOT OPTICAL DEVICES .... 319
1. Trends in Optoelectronics ....................................................... 320
2. Uses for Quantum-Dot Optical Devices ......................................... 321
ACKNOWLEDGMENT ......................................................................... 321
REFERENCES .................................................................................. 321

### Chapter 8 The Latest News

*Mitsuru Sugawara, Kohki Mukai, Hiroshi Ishikawa, Koji Otsubo, and Yoshiaki Nakata*

I. LASING WITH LOW-THRESHOLD CURRENT AND HIGH-OUTPUT POWER FROM COLUMNAR-SHAPED QUANTUM DOTS ........................................... 325

II. EFFECT OF HOMOGENEOUS BROADENING OF SINGLE-DOT OPTICAL GAIN ON LASING SPECTRA ................................................................. 328

III. QUANTUM DOTS ON INGAAS SUBSTRATES ........................................ 331

IV. QUANTUM DOTS EMITTING AT 1.3 µM GROWN BY LOW GROWTH RATES AND WITH AN INGAAS CAP ................................................................. 333

V. REDUCED-TEMPERATURE-INDUCED VARIATION OF SPONTANEOUS EMISSION IN ALTERNATE SUPPLY (ALS) QUANTUM DOTS COVERED BY In$_{0.3}$Ga$_{0.7}$As .................................................. 336
