Molecular Catenanes, Rotaxanes and Knots

A Journey
Through the World
of Molecular Topology

Edited by
J.-P. Sauvage and
C. Dietrich-Buchecker

## Contents

1  **Chemical Topology – Statistical Musings**  
   1.1 Catenanes  
   1.2 Olefin Metathesis  
   1.3 Knots  
   References  

2  **A Knot Theoretic Approach to Molecular Chirality**  
   2.1 Topological Chirality of Knots and Links  
   2.2 Topological Chirality of Embedded Graphs  
   2.3 Topological Chirality of Molecular Knots and Links  
   2.4 Topological Chirality of Molecular Cell Complexes  
   2.5 Molecular Möbius Ladders and Related Molecules  
   2.6 Using Automorphisms to Prove Intrinsic Chirality  
   References  

3  **Soft and Hard Molecule-Based Magnets with a Fully Interlocked Three-Dimensional Structure**  
   3.1 Introduction  
   3.2 Molecular Magnetism  
   3.3 Magnetic Bricks  
   3.4 A Game of Bricks and Pieces of Mortar  
   3.5 Structure of Molecule-Based Magnets Containing Three Spin Carriers, with a Fully Interlocked Structure  
   3.6 Magnetic Properties  
   3.6.1 The Temperature Dependence of Magnetic Susceptibility  
   3.6.2 Field Dependencies of the Magnetization  
   3.7 Some Further Considerations  
   3.8 A Few Words to Conclude  
   References
4 Transition Metal-Incorporating Catenanes

4.1 Introduction ............................................ 57
4.2 Interlocked Compounds Containing Metals ................. 58
4.2.1 Metal-Containing Rotaxanes .......................... 59
4.2.2 Metal-Templated Synthesis of Catenanes ................. 59
4.2.3 Organometallic Catenanes and Rotaxanes ................. 60
4.2.4 Self-Assembly of a [2]Catenane Incorporating (en)Pd(II) Units . 62
4.2.4.1 Quantitative Self-Assembly of a Coordination Catenane .......... 62
4.2.4.2 Mechanism of the Rapid Interconversion: Möbius Strip Mechanism 64
4.2.4.3 Irreversible Interlock of Molecular Rings ................ 64
4.2.4.4 Electronic Effects in the Self-Assembly of Pd(II)-Linked Catenanes 66
4.2.5 Made-to-Order Assembling of Pd(II)-Linked Catenanes .......... 68
4.2.5.1 Quantitative Formation of Catenanes from Rectangular Molecular Boxes ........ 68
4.2.5.2 Selective Formation of Catenanes from Three Species-Eight Components .......... 69
4.2.5.3 Scope and Limitations ................................ 71
4.3 Conclusion ............................................. 74
References ................................................................ 75

5 Catenane and Rotaxane Motifs in Interpenetrating and Self-Penetrating Coordination Polymers ..... 77

5.1 Introduction ............................................. 77
5.1.1 Nets ................................................... 77
5.1.2 Interpenetration of Nets ............................... 79
5.2 Interpenetrating 1D Polymers ............................... 80
5.3 Interpenetrating 2D Networks ............................... 83
5.3.1 Parallel Interpenetration of 2D Frameworks ............... 83
5.3.1.1 Interpenetrating Pairs of Sheets ....................... 83
5.3.1.2 Parallel Interpenetration of more than Two Sheets .......... 87
5.3.1.3 Parallel Interpenetration of Sheets Other than (6,3) and (4,4) .... 87
5.3.1.4 Parallel Interpenetration of 2D Nets to Give a 3D Interlocked Composite .......... 87
5.3.2 Inclined Interpenetration of 2D Frameworks ............... 88
5.3.2.1 More Than One Sheet Passing Through Any Ring .......... 89
5.4 Interpenetrating 3D Networks ............................... 91
5.4.1 Interpenetrating 3-Connected 3D Nets .................... 91
5.4.1.1 Interpenetrating (10,3)-a Nets ....................... 92
5.4.1.2 Interpenetrating (10,3)-b Nets ....................... 93
5.4.1.3 Interpenetrating (8,3)-c Nets ....................... 94
5.4.2 Interpenetrating 4-Connected 3D Nets .................... 94
5.4.2.1 Interpenetrating Diamond-Like Nets .................... 94
5.4.2.2 Interpenetrating Quartz-Like Nets .................... 95
5.4.2.3 Interpenetrating PtS-Like Nets ........................ 95
6 Molecular Knots – From Early Attempts to High-Yield Template Syntheses

6.1 Introduction
6.1.1 Topology - From Arts to Mathematics
6.1.2 Biological Topology – DNA and Proteins
6.1.3 Historical Perspectives - Catenanes and Chemical Knots
6.1.4 The Various Routes Towards a Molecular Knot – Early Attempts
6.1.4.1 Approaches Involving Randomness
6.1.4.2 Attempts using Directed Syntheses
6.1.4.3 Attempts Based on Templated Synthesis
6.2 First Synthesis
6.2.1 Strategy
6.2.2 A Synthetic Molecular Trefoil Knot – First Results
6.3 Generalization and Improvements
6.3.1 Formation of Double-Stranded Helical Precursors with Polymethylene Linkers
6.3.2 A Dramatic Improvement – Use of 1,3-Phenylene Spacer Between the Coordinating Units
6.3.3 High-Yield Synthesis of a Dicopper(I) Trefoil Knot using Ring-Closing Metathesis Methodology
6.4 Trefoil Knots as Transition Metal Ligands – Specific Kinetic, Electrochemical, and Photochemical Properties
6.4.1 Topological Effect – The Polymethylene Bridged Complexes
6.4.2 Structural Effect – The Phenylene Bridged Trefoil Knot Cu$_2$(K-84)$_p^{2+}$
6.5 Resolution of a Molecular Knot into its Enantiomers
6.6 Conclusion
