Noise in Spatially Extended Systems

With 120 Illustrations

Springer
Contents

Preface vii
Acknowledgments ix

1 Introduction 1
1.1 Fluctuations in a Macroscopic World 1
1.1.1 Describing Stochastic Dynamics 3
1.1.2 Stochastic Partial Differential Equations 4
1.1.3 Experimental Setups 4
1.1.4 Numerical Experiments 10
1.1.5 Noise-Induced Phenomena 10
1.2 Transitions in Zero-Dimensional Systems 11
1.2.1 Internal Noise 12
1.2.2 External Noise 15
1.3 Phase Transitions in $d$-Dimensional Systems 23
1.3.1 Equilibrium Phase Transitions 23
1.3.2 Nonequilibrium Phase Transitions 32
1.3.3 Dynamics of Phase Transitions 37
1.4 Pattern Formation 39
1.4.1 Order-Parameter Equations 40
1.4.2 Pattern-Forming Instabilities 42
1.4.3 Amplitude Equations and Beyond 43
1.4.4 Real Patterns 44
1.5 Other Effects of Noise in Extended Media 45
1.5.1 Noise-Sustained Convective Structures ............... 45
1.5.2 Spatial Stochastic Resonance ......................... 48

2 Fundamentals and Tools .................................. 53
  2.1 Introduction to Stochastic Partial Differential Equations 53
     2.1.1 Generalities and Modeling .......................... 54
     2.1.2 Stochastic Calculus in SPDEs ...................... 58
     2.1.3 Fokker–Planck Equation for Spatially Extended Systems .................. 64
     2.1.4 Statistical Moments and Correlations .............. 65
  2.2 Analytical Techniques ................................. 66
     2.2.1 Mean-Field Analysis and Beyond .................. 66
     2.2.2 Small Noise Expansions ............................ 69
     2.2.3 Linear Stability Analysis .......................... 72
     2.2.4 Dynamic Renormalization Group Analysis ......... 76
  2.3 Numerical Techniques ................................. 85
     2.3.1 Algorithms for Solving SPDEs ...................... 85
     2.3.2 Generation of Correlated Noises .................. 92

3 Noise-Induced Phase Transitions .......................... 115
  3.1 Additive Noise ........................................ 115
     3.1.1 Ginzburg–Landau Model with Colored Noise ...... 116
     3.1.2 Noise-Induced Shift of the Transition Point .... 117
     3.1.3 Fokker–Planck Analysis ............................ 124
     3.1.4 Dynamic Renormalization Group Analysis ......... 127
  3.2 Additive and Multiplicative Noise ...................... 130
     3.2.1 Ginzburg–Landau Model with Multiplicative Noise 131
     3.2.2 Pure Noise-Induced Phase Transitions ............. 137
     3.2.3 Noise-Induced First-Order Phase Transitions .... 150
  3.3 Multiplicative Noise ................................... 153
     3.3.1 Multiplicative Noise Universality Class .......... 153
     3.3.2 Disordering Transitions Induced by Pure Multiplicative Noise ........... 155
     3.3.3 Numerical Simulation Results ...................... 157

4 Dynamics of Phase Transitions with Fluctuations ............ 159
  4.1 Internal Multiplicative Noise .......................... 159
     4.1.1 Mesoscopic Derivation .............................. 160
     4.1.2 Application to Phase Separation Dynamics ......... 167
     4.1.3 Extension to Nonconserved Order Parameter ....... 172
  4.2 Noise-Induced Phase Separation ........................ 174
     4.2.1 External Fluctuations in Phase Separation ....... 175
     4.2.2 Stability Analysis ................................. 176
     4.2.3 Phase Diagram ..................................... 177
