Quantum Statistical Mechanics of Lattice Systems

Peierls Instability for the Holstein Model ........................................... 149
Giuseppe Benfatto

Rigidity of Interfaces in a Model of Crystalline Matter ....................... 163
Nilanjana Datta, Alain Messager, and Bruno Nachtergaele

Long Time Statistics of Quantum Dynamical Systems ....................... 185
Mark Fannes

Falicov-Kimball Models: A Partial Review of the
Ground States Problem ............................................................... 199
Christian Gruber

Hubbard Model with Magnetic Field: Antiferromagnetism
and Paramagnetism ................................................................. 223
Roman Kotecký and Daniel Ueltschi

Quantum Hall Effect without Divergence of the Localization Length ..... 239
Tony C. Dorlas, Nicolas Macris, and Joe V. Pulé

On Quantum Stochastic Dynamics for Quantum Spin Systems
on a Lattice: Low Temperature Problem ........................................ 249
Adam W. Majewski and Boguslaw Zegarlinski

A Renormalization Group Computation of the Incommensurate
Holstein-Hubbard and the XYZ Correlation Functions .................... 259
Vieri Mastropietro

Zero Energy States and Decay of Correlations ............................... 281
Taku Matsui

Interface States of Quantum Spin Systems ..................................... 287
Alain Messager and Bruno Nachtergaele

Quantum n-Vector Anharmonic Crystals ....................................... 301
André Verbeure
Quantum Statistical Mechanics of Continuous Systems

Thermodynamic Behavior of the Bogoliubov Weakly Imperfect Bose Gas ........................................ 313
Jean-Bernard Bru and Valentin A. Zagrebnov

Sum Rules for Coulomb Systems with Hard Cores .................. 323
David C. Brydges and Philippe A. Martin

Continuous Constructive Fermionic Renormalization .......................... 331
Margherita Disertori and Vincent Rivasseau

Noncommutative Central Limits and Bose-Einstein Condensation ...... 339
Tony C. Dorlas

Ground State Energy of The Low Density Bose Gas .............. 349
Elliott H. Lieb and Jakob Yngvason

Entropy Oscillations in Chemical Reactions .......................... 359
Ljiljana D. Mašković, Bratislav Tošić, and Radojica Masimović

Generalization of a Green Function in the Framework of Colombeau Algebra .................................. 369
Bratislav S. Tošić, Ljiljana D. Mašković, Radojica Masimović, and Stevan R. Pilipović

Disordered Systems

Universality and Scaling in Random Matrix Models and Random Polynomials .......................... 379
Pavel Bleher

A Dynamical System Approach to Self-Organized Criticality ............ 399
Bruno Cessac, Philippe Blanchard, and Tyll Krueger

KAM–Renormalization-Group for Hamiltonian Systems with Two Degrees of Freedom .......................... 411
Cristel Chandre and Hans R. Jauslin
On the Landscape of Attractors in a Neural Network
with Interacting Patterns .............................................. 421
Daniel Gandolfo, Lahoussine Laanait, Alain Messager,
and Jean Ruiz

A Simple Approach to Global Regime of Random Matrix Theory .......... 429
Leonid Pastur

Some Estimates for the Critical Temperature of the Sherrington–Kirkpatrick Model with Magnetic Field ....................................... 455
Maria Shcherbina

Statistical Mechanics and Error-Correcting Codes ...................... 475
Nicolas Sourlas

Gibbsian vs Non–Gibbsian States

Potentials for One-Dimensional Restrictions of Gibbs Measures ........ 485
Christian Maes, Frank Redig, and Annelies van Moffaert

Nonperiodic Gibbs States in Microscopic Models of Quasicrystals .......... 501
Jacek Miękisz

The Renormalization-Group Peculiarities of Griffiths and Pearce:
What have we learned? ................................................... 509
Aernout C.D. van Enter
