Contents

1 Input-Output Stability
  1.1 $L_q$-spaces and their extensions; input-output maps .......... 1
  1.2 $L_q$-stability and $L_q$-gain; closed-loop stability .......... 4
  1.3 Notes for Chapter 1 ........................................... 9

2 Small-gain and Passivity of Input-Output Maps 11
  2.1 The small-gain theorem ........................................ 11
  2.2 Passivity and the passivity theorem .......................... 14
  2.3 Relation between passivity and $L_2$-gain ...................... 23
  2.4 Notes for Chapter 2 ........................................... 27

3 Dissipative Systems Theory ........................................ 31
  3.1 Dissipative systems ............................................ 31
  3.2 Stability of dissipative systems ................................ 37
  3.3 Stabilization of passive systems ............................... 44
  3.4 The small-gain and passivity theorems revisited .............. 45
    3.4.1 Interconnection of passive systems ....................... 46
    3.4.2 The small-gain theorem .................................. 50
  3.5 Dissipativity and optimal control ............................. 56
  3.6 Notes for Chapter 3 ........................................... 58

4 Hamiltonian Systems as Passive Systems 63
  4.1 Euler-Lagrange equations and passivity ....................... 63
    4.1.1 Tracking control of a robot manipulator ................. 68
    4.1.2 Passivity and Riemannian geometry ....................... 69
  4.2 Hamiltonian control systems ................................... 72
    4.2.1 Port-controlled Hamiltonian systems .................... 72
    4.2.2 Properties of port-controlled Hamiltonian systems ...... 80
    4.2.3 Port-controlled Hamiltonian systems with dissipation ... 85
    4.2.4 Stabilization by damping injection ....................... 90
CONTENTS

4.3 Control of port-controlled Hamiltonian systems with dissipation 92
  4.3.1 Control by interconnection 92
  4.3.2 Passivity-based control of port-controlled Hamiltonian systems with dissipation 102
4.4 Implicit port-controlled Hamiltonian systems 109
  4.4.1 Power-conserving interconnections 109
  4.4.2 Implicit port-controlled Hamiltonian systems 112
  4.4.3 Scattering representations of power-conserving interconnections 117
4.5 Notes for Chapter 4 121

5 Passivity by Feedback 125
  5.1 Feedback equivalence to a passive system 125
  5.2 Stabilization of cascaded systems 130
  5.3 Notes for Chapter 5 136

6 Factorizations of Nonlinear Systems 137
  6.1 Stable kernel and image representations; $L_2$-gain perturbation models 137
    6.1.1 Stable kernel and image representations 137
    6.1.2 $L_2$-gain perturbation models 144
  6.2 Stable kernel representations and parametrization of stabilizing controllers 146
  6.3 All-pass factorizations 154
  6.4 Notes for Chapter 6 159

7 Nonlinear $H_\infty$ Control 163
  7.1 State feedback $H_\infty$ control 164
  7.2 Output feedback $H_\infty$ control 175
  7.3 Notes for Chapter 7 189

8 Hamilton-Jacobi Inequalities 193
  8.1 Solvability of Hamilton-Jacobi inequalities 193
  8.2 An aside on optimal control 205
  8.3 Dissipativity of a nonlinear system and its linearization 211
  8.4 $H_\infty$ control of a nonlinear system and its linearization 216
  8.5 Notes for Chapter 8 226

Bibliography 229
