Term *Rewriting* and *All That*

Franz Baader
*RWTH, Aachen*

and

Tobias Nipkow
*Technische Universität, München*
## Contents

**Preface**  
page ix

1. **Motivating Examples**  
   1

2. **Abstract Reduction Systems**  
   7
   2.1 Equivalence and reduction  
   7
   2.2 Well-founded induction  
   13
   2.3 Proving termination  
   16
   2.4 Lexicographic orders  
   18
   2.5 Multiset orders  
   21
   2.6 Orders in ML  
   26
   2.7 Proving confluence  
   28
   2.8 Bibliographic notes  
   33

3. **Universal Algebra**  
   34
   3.1 Terms, substitutions, and identities  
   34
   3.2 Algebras, homomorphisms, and congruences  
   44
   3.3 Free algebras  
   47
   3.4 Term algebras  
   49
   3.5 Equational classes  
   49

4. **Equational Problems**  
   58
   4.1 Deciding $\approx_E$  
   59
   4.2 Term rewriting systems  
   61
   4.3 Congruence closure  
   62
   4.4 Congruence closure on graphs  
   65
   4.5 Syntactic unification  
   71
   4.6 Unification by transformation  
   73
   4.7 Unification and term rewriting in ML  
   79
   4.8 Unification of term graphs  
   82
   4.9 Bibliographic notes  
   91
Contents

5 Termination
  5.1 The decision problem
  5.2 Reduction orders
  5.3 The interpretation method
  5.4 Simplification orders
  5.5 Bibliographic notes

6 Confluence
  6.1 The decision problem
  6.2 Critical pairs
  6.3 Orthogonality
  6.4 Beyond orthogonality
  6.5 Bibliographic notes

7 Completion
  7.1 The basic completion procedure
  7.2 An improved completion procedure
  7.3 Proof orders
  7.4 Huet's completion procedure
  7.5 Huet's completion procedure in ML
  7.6 Bibliographic notes

8 Gröbner Bases and Buchberger's Algorithm
  8.1 The ideal membership problem
  8.2 Polynomial reduction
  8.3 Gröbner bases
  8.4 Buchberger's algorithm
  8.5 Bibliographic notes

9 Combination Problems
  9.1 Basic notions
  9.2 Termination
  9.3 Confluence
  9.4 Combining word problems
  9.5 Bibliographic notes

10 Equational Unification
  10.1 Basic definitions and results
  10.2 Commutative functions
  10.3 Associative and commutative functions
  10.4 Boolean rings
  10.5 Bibliographic notes
# Contents

11 Extensions 265
11.1 Rewriting modulo equational theories 265
11.2 Ordered rewriting 267
11.3 Conditional identities and conditional rewriting 269
11.4 Higher-order rewrite systems 270
11.5 Reduction strategies 271
11.6 Narrowing 273

Appendix 1 Ordered Sets 276

Appendix 2 A Bluffer’s Guide to ML 278

Bibliography 284
