An Introduction to Microelectromechanical Systems Engineering

Nadim Maluf

Artech House
Boston • London
Contents

Foreword
Preface

1 MEMS: A Technology from Lilliput

The promise of technology
What are MEMS—or MST?
What is micromachining?
Applications and markets
To MEMS or not to MEMS?
Standards
The psychological barrier
Journals, conferences, and Web sites
  List of journals and magazines
  List of conferences and meetings
Summary
References
2 The Sandbox: Materials for MEMS

Silicon material system
  Silicon
  Silicon oxide and nitride
  Thin metal films
  Polymers

Other materials and substrates
  Glass and quartz substrates
  Silicon carbide and diamond
  Gallium arsenide and other group III-V compound semiconductors
  Shape-memory alloys

Important material properties and physical effects
  Piezoresistivity
  Piezoelectricity
  Thermoelectricity

Summary

References

3 The Toolbox: Processes for Micromachining

Basic process tools
  Epitaxy
  Oxidation
  Sputter deposition
  Evaporation
  Chemical vapor deposition
  Spin-on methods
  Lithography
  Etching
Contents

Advanced process tools 70
  Anodic bonding 70
  Silicon-fusion bonding 71
  Grinding, polishing, and chemomechanical polishing (CMP) 72
  Sol-gel deposition methods 74
  Electroplating and molding 75
Combining the tools—examples of commercial processes 75
  Polysilicon surface micromachining 77
  Combining silicon fusion bonding with reactive ion etching (SFB-DRIE) 79
  SCREAM 81
Summary 82
References 83

4 The Gearbox: Commercial MEM Structures and Systems 87

General design methodology 88
Techniques for sensing and actuation 90
  Common sensing methods 90
  Common actuation methods 91
Passive MEM structures 95
  Fluid nozzles 95
  Inkjet print nozzles 97
Sensors 99
  Pressure sensors 99
  High-temperature pressure sensors 104
  Mass flow sensors 105
  Acceleration sensors 108
  Angular rate sensors and gyroscopes 119
  Radiation sensors—infrared imager 134
The New Gearbox: A Peek Into the Future

5

Passive micromechanical structures

Hinge mechanisms

Sensors and analysis systems

Miniature biochemical reaction chambers

Electrophoresis on a chip

Microelectrode arrays

Actuators and actuated systems

Micromechanical resonators

High-frequency filters

"Grating light valve" display

Optical switches

Micropumps

Thermomechanical data storage

RF switch over gallium arsenide

Summary

References

The Box: Packaging for MEMS

6

Key design and packaging considerations

Wafer or wafer-stack thickness

Wafer dicing concerns
