Hugues Dreysse (Ed.)

Electronic Structure and Physical Properties of Solids

The Uses of the LMTO Method

Lectures of a Workshop Held at Mont Saint Odile, France, October 2–5, 1998

Springer
Contents

Part I  Ground and Excited-State Formalisms

Developing the MTO Formalism
O. K. Andersen, T. Saha-Dasgupta, R. W. Tank, C. Arcangeli, O. Jepsen,
G. Krier ................................................................. 3

From ASA Towards the Full Potential
J. Kollár, L. Vitos, H. L. Skriver ........................................... 85

A Full-Potential LMTO Method
Based on Smooth Hankel Functions
M. Methfessel, M. van Schilfgaarde, R. A. Casali ..................... 114

Full-Potential LMTO
Total Energy and Force Calculations

Excited States Calculated by Means of the LMTO Method
M. Alouani, J. M. Wills .................................................. 168

Part II  Magnetic Properties

Fully Relativistic Band Structure Calculations
for Magnetic Solids – Formalism and Application
H. Ebert ................................................................. 191

First Principles Theory of Magneto–Crystalline Anisotropy
O. Eriksson, J. Wills ................................................... 247

On the Implementation of the Self-Interaction Corrected Local
Spin Density Approximation for d- and f-Electron Systems
W. M. Temmerman, A. Svane, Z. Szotek, H. Winter, S. V. Beiden........ 286

Ab Initio Theory of the Interlayer Exchange Coupling
J. Kudrnovský, V. Drchal, I. Turek, P. Bruno, P. Dederichs, P. Weinberger313
Part III  Disordered Alloys

Disordered Alloys and Their Surfaces: The Coherent Potential Approximation
I. Turek, J. Kudrnovský, V. Drchal ........................................... 349

Locally Self-Consistent Green’s Function Method and Its Application in Theory of Random Alloys
I. A. Abrikosov, P. A. Korzhavyi, B. Johansson .......................... 379

Part IV  Large-Scale Real-Space Calculations

Sparse Direct Methods: An Introduction
J. A. Scott ................................................................. 401

Real-Space Tight-Binding Approach to Magnetic Anisotropy: Application to Nickel Films on Copper
D. Spišák and J. Hafner .................................................. 416

Combining Real Space and Tight Binding Methods for Studying Large Metallic Systems
C. Cornea and D. Stoeffler ............................................. 434
