Annals of the International Society of Dynamic Games

Advances in Dynamic Games and Applications

Eitan Altman
Odile Pourtallier

Editors

Birkhäuser
Boston • Basel • Berlin
Contents

Preface ............................................................. vii
Contributors ....................................................... ix

Part I Dynamic Games: Theory

On Problems with Information in Some Games: Modelling the Strategies in Some Dynamic Games ......................... 3
Tadeusz Radzik and A.J. Goldman

A Historical Perspective on Cooperative Differential Games .... 19
Alain Haurie

Certainty Equivalence Principle and Minimax Team Problems .... 31
Pierre Bernhard and Naira Hovakimyan

Evolutionary Processes in Signaling Games: The Impact of Different Learning Schemes ........................................... 45
Gisèle Umbhauer

Mixed Strategies for Hierarchical Zero-Sum Games ............... 65
Lina Mallozzi and Jacqueline Morgan

The Existence and Uniqueness of Equilibria in Convex Games with Strategies in Hilbert Spaces ............... 79
Dean A. Carlson

Part II Stochastic Games

The Existence of Equilibrium Payoffs in Two-Player Stochastic Games .......................................................... 101
Nicolas Vieille
Persistently Good Strategies for Nonleavable Stochastic Games with Finite State Space ........................... 119
Piercesare Secchi and William D. Sudderth

On Stochastic Hybrid Zero-Sum Games with Nonlinear Slow Dynamics .............................................. 129 Minh-Tuan Nguyen, Eitan Altman, and Vladimir Gaitsgory

On Multichain Markov Games ................................. 147
Heinz-Uwe Kuenle

Perturbed Zero-Sum Games with Applications to Stochastic and Repeated Games ................................... 165
Eitan Altman, Eugene A. Feinberg, Jerzy Filar, and Vladimir Gaitsgory

Part III  Solution Methods of Dynamic Games

Construction of Singular Surfaces .............................. 185
Sergey S. Kumkov and Valery S. Patsko

Parallel Algorithms for the Isaacs Equation .................. 203
Maurizio Falcone, Piero Lanucara, and Monica Marinucci

Computation of S-adapted Equilibria in Piecewise Deterministic Games via Stochastic Programming Methods .................................................. 225
Alain Haurie and Francesco Moresino

Comparison of Two Numerical Approaches for the Barrier and Value of a Simple Pursuit–Evasion Game .................. 253
Pierre Bernhard, Stephane Crepey, and Alain Rapaport

Part IV  Dynamic Games: Applications

On Optimal Missile Guidance Upgrades with Dynamic Stackelberg Game Linearizations .................................. 277
Michael H. Breitner, Uwe Rettig, and Oskar von Stryk

Homicidal Chauffeur Game: Computation of Level Sets of the Value Function ........................................... 295
Valery S. Patsko and V.L. Turova

“The Tragedy of the Commons” Modelled by Large Games .......................... 323
Agnieszka Wiszniewska-Matyszkien
