List of symbols xvii
List of Greek symbols xxv
List of abbreviations and acronyms xxxi

1. Introduction 1
  1.1. Electromagnetic waves 2
  1.2. The concept of coherence 4
  1.3. Laser beam sources 9
  1.4. Laser–matter interaction 11
  1.5. Ultra-wideband ultra-short electromagnetic pulses 15
    1.5.1. Electromagnetic missile 16
    1.5.2. Fast-opening switch for time-gating 18
    1.5.3. Power microwave impulse generators 19
    1.5.4. Ultra-short X-ray pulse generation 20
  1.6. Synchrotron Radiation sources 21
  1.7. Applications of short electromagnetic wave interactions with matter ... 22
  1.8. Space–time domain and time–frequency approaches 28

2. Ultra-short electromagnetic pulse generation and interaction with matter 31
  2.1. Theoretical and analytical approach 31
    2.1.1. Dynamic approach to ultra-short pulse effects using Fourier analysis 32
    2.1.1.1. Electro-optical effects 37
Progress in ultra-short electromagnetic pulse technology

2.1.1.1. In the microwave frequency range .......... 37
2.1.1.2. In the infrared, visible and VUV frequency range .......... 39
2.1.1.3. In the X-ray frequency range .......... 39
2.1.1.4. Generating ultra-short soft X-ray pulses of high-order harmonics .......... 44
2.1.1.5. Ultra-short pulses of Synchrotron Radiation .......... 45
2.1.1.6. Ultra-short pulses of Self-Amplification by Spontaneous Emission (SASE) .......... 46
2.1.2. Alternative representations .......... 46
2.1.2.1. Gabor time-localization .......... 47
2.1.2.2. Wavelet method .......... 48
2.1.2.3. Inverse symbolic method .......... 48
2.1.2.3.1. Using Green’s function in the case of time-space localized sources .......... 48
2.1.2.3.2. Mathematical and computational methods operating purely in the time domain .......... 52
2.1.3. Analytical and numerical studies of particular cases of ultra-short pulse propagation .......... 53
2.1.4. Principle of optical and X-ray pulse compression .......... 54
2.1.4.1. In the first step .......... 55
2.1.4.2. In the second step .......... 56
2.2. Trends in instrumentation for ultra-short pulse generation and signal data processing .......... 59
2.2.1. In the microwave range of frequencies .......... 60
2.2.1.1. Opto-electronic devices for generation of ultra-short EM pulses .......... 60
2.2.1.1.1. The Endfire Tapered Slot (ETS) antennae on dielectric substrates .......... 64
2.2.1.1.2. The Exponentially Tapered Coplanar Strip (ETCS) antenna .......... 65
2.2.1.1.3. The Equiangular Spiral Antenna .......... 65
2.2.1.1.4. Broadband Logarithmically Periodic Antenna Structures .......... 66
2.2.1.1.5. T-ray thin film emitter .......... 67
2.2.1.2. Free space measurements in the time domain using an opto-electronically pulsed antenna ........................................ 68
2.2.1.3. Propagation of δ-function pulses in lossy or lossy-less dispersive media ........................................ 75
  2.2.1.3.1. Case of lossy-less dispersive media ................. 77
  2.2.1.3.2. Case of lossy dispersive media .................... 79
2.2.1.4. Data processing of ultra-wideband signals .......... 80
2.2.2. In the visible–infrared frequency ranges .................. 82
  2.2.2.1. Ultra-short laser pulse measurement by interferometric correlations ........................................ 82
  2.2.2.2. Ultra-short laser pulse measurement by intensity correlation ........................................ 84
2.2.3. In the X-ray range of frequencies .......................... 85
  2.2.3.1. Different physical processes of ultra-short X-ray pulse generation ........................................ 85
    2.2.3.1.1. Multiple harmonic generation by interaction of high-power lasers with rare gases .......... 85
    2.2.3.1.2. Self-Amplification of Spontaneous Emission (SASE) of radiation .......................... 87
    2.2.3.1.3. X-ray beams generated by laser-produced Plasmas [DAU 93] .................................... 90
  2.2.3.2. Methods of ultra-short X-ray pulse measurement: X-ray time-resolved spectroscopy .................. 91
2.3. Applications ..................................................... 93
  2.3.1. Diagnostics for time-resolved measurements ............... 93
    2.3.1.1. In the microwave and sub-millimetric range ......... 93
    2.3.1.2. In the visible–IR frequency range ................ 97
    2.3.1.3. In the X-ray field ................................ 100
  2.3.2. New design of ultra-short X-ray pulse generator for plasma studies or other fields ..................... 102
  2.3.3. Potential applications for dynamic studies in biology and biochemistry ......................................... 106

  3.1. Nuclear fusion and laser-produced plasmas .................. 111
    3.1.1. Fusion and energy: summary of the basic relationships .......... 112
      3.1.1.1. Magnetic confinement fusion ........................ 114
      3.1.1.2. Inertial Electrostatic Confinement (ICE) fusion .... 114
3.1.1.3. Laser-driven Inertial Confinement Fusion (ICF) .......... 115
3.1.2. Features of plasma and electromagnetic radiation .......... 117
  3.1.2.1. Timescales and parameters .................................. 117
  3.1.2.2. Motion of charged particles through a laser-produced plasma ......................................................... 118
  3.1.2.3. Electromagnetic radiation and shock wave propagation to achieve inertial confinement by a laser .......... 120
  3.1.2.4. Principle of inertial confinement by a laser ........ 123
     3.1.2.4.1. Direct incidence on target ......................... 124
     3.1.2.4.2. Indirect incidence on target ....................... 125
3.1.3. Power lasers and their interactions .......................... 129
  3.1.3.1. Optical cavities for laser oscillators .................. 129
     3.1.3.1.1. In the infrared and UV wavelength domains .... 129
     3.1.3.1.2. In the X-ray wavelength domain ................... 131
  3.1.3.2. Optical pumping ............................................ 132
  3.1.3.3. Solid state amplifier ....................................... 134
  3.1.3.4. Chain ...................................................... 137
  3.1.3.5. Frequency converter ....................................... 137
3.1.4. Target for the inertial confinement by laser plasma-produced X-rays ......................................................... 138
3.1.5. Laser chains and multi-armed laser facility .............. 140
3.1.6. RX and laser-produced plasma diagnostics .................. 143
3.1.7. Inertial confinement projects by national laser programmes .. 145
3.2. Ultra-short laser pulses and interactions with matter ........ 149
  3.2.1. Upgraded petawatt lasers: lasers of the future .......... 150
  3.2.2. Temporal aspect of ultra-short high-intensity laser interactions ............................................................... 151
     3.2.2.1. Ultra-short laser pulse interactions ................ 152
     3.2.2.2. Ultra-short high-intensity laser interactions .... 156
3.2.3. Ultra-short laser–matter interaction applications in reduced energy scale ...................................................... 161
3.2.4. Advanced concepts of diagnostics for laser-produced plasma involving ultra-short X-ray pulse generators ........ 165
3.2.5. Various other applications of small-scale laser–matter interactions .............................................................. 166
3.2.6. Laser-produced plasmas and SR sources ...................... 167
4. Temporal aspects for a Synchrotron Radiation source: interaction of ultra-short X-ray pulses with matter ........................................ 169

4.1. Progress and trends in instrumentation and X-ray optics .................. 171

4.1.1. New design of X-ray sources for the generation of ultra-short pulses ................................................................. 171

4.1.2. Possible chirp and compression of Synchrotron Radiation pulses ................................................................. 173

4.1.3. Time structure of the Synchrotron Radiation source at ESRF ... 177

4.1.3.1. Review of basic theoretical considerations concerning SR emission and propagation ......................... 177

4.1.3.2. Space–time dependence of both amplitude and phase of SR electric field generated by a relativistic electron beam deviated in a bending magnet dipole .................. 180

4.1.3.3. Instrumentation for time-resolved spectroscopy applied to SR beam measurements ......................... 183

4.1.3.4. Summary of results of time–space lag measurements on the BM5 SR beamline at ESRF ...... 187

4.1.3.5. Data processing method applied for time-resolved signal of SR X-rays ......................................................... 190

4.1.3.5.1. Phase lags for discrete X-ray photon energies delivered by a bending magnet at ESRF ...... 191

4.1.3.5.2. Dependence of frequency–space phase lags from SR energies for different operating modes of storage ring at ESRF ...................... 193

4.1.3.5.3. Analytical approach to experimental results ................................................................. 194

4.1.4. New cross-correlation method for SR measurements with time-resolved spectroscopy ........................................ 195

4.1.4.1. Principle of sampling time measurements for X-ray pulses ................................................................. 196

4.1.4.2. Optical chopper for hard X-ray beams ................................................................. 198

4.1.4.3. Proposed experimental set-up for X-ray application of cross-correlation principle ....................................... 200

4.1.4.4. Fast detector features for X-ray pulses ................................................................. 201

4.2. X-ray temporal modulation for dynamic studies in condensed matter in biology, biochemistry and medicine ......................... 202

4.2.1. Instrumental aspects for Synchrotron Radiation sources .................. 205
4.2.2. Expected applications: new fields of interest for SR

ultra-short pulses .......................................................... 209

4.2.2.1. In crystallography ................................................. 210
4.2.2.2. In the physics of molecules ..................................... 211
4.2.2.3. In nuclear physics of particles ................................. 211
4.2.2.4. In medicine ...................................................... 213

Conclusion ........................................................................... 217
Glossary ............................................................................. 219
References .......................................................................... 222
