Contents

Preface xv

Design Methods, Techniques, and Tools

Design for X

Prognosis of the competitive dependability of mechatronic products
T Tähemaara and V Reedik 3

A design procedure for the safety of mechanical systems
U Pighini, M Fargnoli, and D Geraci 11

The determination of function costs in engineering products
H Schlink, H Schneider, and G Höhne 19

Strategies and rules for lightweight design
W Schmidt, W Puri, and H Meerkamm 27

Assessing the impact of misaligned loads on beams using the method of shape factors
U P Kahangamage, S C Burgess, J H Sims Williams, and G Barr 35

Predicting the fatigue notch effect from partial experimental data
J-F P Debongnie 43

Design assistance for fibre-reinforced plastics
W Puri, S Ritt, H Meerkamm, and G Ziegmann 51

Developing design for safety of automated systems in pulp and paper industries
F Gauthier, R Benoît, and P Doucet 59

A design method developed for production machinery companies
R P Gouvinhas and J Corbett 67

Analysis for Design

Approach to evaluate the precision of technical systems
R Hochmuth and H Meerkamm 75

Improving reliability during conceptual design
J Smith and P J Clarkson 83

Assisted model development for kinematic analysis and optimization of mechanical systems
C Bowler, B J Hicks, A J Medland, and G Mullineux 91
Mathematics and algorithms for pressure distribution controlled shape design
N C C M Moes 99

Analysis General
Selection of finite elements considering loadcases and geometry
F Rieg and F Koch 107

Study of the adhesive force reduction of press-fitted axle assemblies by ratchet extrusion
S Nishimura, I Sakamoto, and H Kawashima 115

Applying generic constraint solving techniques in providing insights into engineering design
H Sawada and X-T Yan 123

Generation of shape instances for ergonomic optimization of shapes
N C C M Moes, Z Rusik, and I Horvath 131

A finite-element pre-processing interface with interactive meshing capabilities
A Liverani and A Cucchi 139

Optimization
Design of part families for reconfigurable machining systems based on manufacturability feedback
B Lee and K Saitou 147

A new approach to structure sharing
A Chakrabarti and R Regno 155

Optimization of CAM profile using genetic algorithm
S K Sim and Y W Chan 163

Modelling and optimization of existing mechanical systems
B J Hicks, C Bowler, A J Medland, and G Mullineux 171

Form factors – a design method to support the selection of structural concepts
S C Burgess, D Pasini, and D Smith 179

Design optimization of large-scale structures
L Lamberti and C Pappaletere 187

Shape optimization based on lifetime prediction measures
B Ilzhöfer, O Müller, P Häufller, A Albers, and P Allinger 195

Multi-criteria Optimization
An approach to multi-objective optimization for parametric synthesis
K Shea 203

Mapping the design optimization landscape
M E Balázs, P J Clarkson, and G T Parks 211

Managing approximation in multi-disciplinary design optimization
Y-S Yang, B-S Jang, S Cho, W-S Ruy, and H-S Jung 219

Metamodel representations for robustness assessment in multi-objective optimization
J Andersson and P Krus 227

Conceptual and Specification Phase Tool
Genetic engineering and conceptual design
P Feng, Y Chen, S Pan, and M Zhang 235

Development of a generic framework for specification of pharmaceutical equipment from case studies
N Calder and S Sivaloganathan 243

Conceptual design of preferred concepts, by evaluation and computerized combination of solution principles
Y Gilboa, M P Weiss, and A Cohen 251

An interface tool for driving innovation during preparatory phases – application in the design of composite parts
J Legardeur, J-F Boujut, and H Tiger 259

AI-based Methods
An automated expert procedure for the choice of mechanical systems
S Baragetti and E Rovida 267

Designing a representation to support function – means based synthesis of mechanical design solutions
R H Bracewell and K M Wallace 275

Verification of redesign models – a CSP approach
I Arana and H Ahriz 283

A knowledge-based functional reasoning strategy to the conceptual design of mechanical products
W Y Zhang, S B Tor, and G A Britton 291

Ergonomics and Human Factors
Inclusive design – user capabilities and product demands
L-A Harrison, P J Clarkson, and S Keates 299

State-of-the-art review on user interface design of consumer electronic products – the integration of cognitive science into the design process
D Lim, C Bouchard, and A Aoussat 307
An approach to design for use
J Janhager 315

Ergonomics as an asset in kitchen furniture design
C Leborgne, B Roussel, A Aoussat, J M Barbier, and S Berthelot 323

Supporting ‘design for all’ through an integrated computer-aided ergonomics tool
R Marshall, K Case, D Gyi, R Oliver, and M Porter 331

Macro-ergonomic design of a tollbooth
L B de M Guimarães and F S Fogliatto 339

The creation of techniques for the design of machines compatible with human posture
M A Williams and A J Medland 347

Towards an inclusive design approach – a case study of exclusion
P J Clarkson and S Keates 355

Ergonomics and product design trends – or how to anticipate future usage
B Roussel, C Bouchard, H Christofol, and I. Auvray 363

Dialogue models of knowledge intensive assistance in shape conceptualization
J C Verlinden, H Horváth, and P de Jager 373

Aesthetics and Quality Methods 381

Conceptual design phase of plastic injection-molded component – methodology to establish component design specifications
C V Ferreira, F A Forcellini, and A Ogliari 381

Aesthetics design improvement
R Wagner 389

Determination of optimum specifications of indigenous oil palm biomass processing machinery – initial technical requirements derived through QFD approach
M Saleh and A R Omar 397

Quality Methods 405

Value-adds assessment method for product deployment across life stages through quality function deployment
K Fujita and T Nishikawa 405

Design quality metrics used as a quantitative tool for the conceptual design of a new product
A Eri, M P Weiss, and A Zonnenshain 413

Dynamically managing product design quality under resource constraints
E Levy and Y Reich 421

Beyond satisfaction – an investigation of the delighted customer and implications for the design of desirable products
A Burns and S Evans 429

Material and Component Selection 437

Integrating engineering component representations for the design of systems from standard components
B J Hicks, S J Culley, and G Mullineux 437

Towards design method for heterogeneous components
K-Z Chen and X-A Feng 445

Environmentally conscious materials selection tool with process assessment
N Shibaike 453

Knowledge base for designing with shape memory alloys
E G Welp and J Breidert 459

Modular Engineering and Product Platforms – Industrial Case Studies 467

An experience of modularity through design
J S Smith, M D Robb, A H B Duffy, A Thomson, and C Nisbet 467

CAX-supported modular system for development and design of light rail vehicles
G Lashin and M Doblies 475

Functional modular design – an industry case study
J Humphries and D Radcliffe 483

Product family management based on platform concepts
A P Hofer and M Gruenenfelder 491

Modular Engineering and Product Platforms – Product Families 499

Design of a gradual modular platform and variants for a layout product family
G Dobrescu and Y Reich 499

Design of product families – an example within a small and medium sized enterprise
S Berli, M Germani, F Mandorli, and H E Otto 507

Numerical taxonomy – a systematic approach to identifying potential product platforms
K Pedersen, J K Allen, and F Mistree 515
A process of modularizing product families
K Otto 523

Modular Engineering and Product Platforms
531
Metrics for executing a product platform strategy
W Schellhammer and H Karandikar 531

CaeDRe – a product platform to support creation and evaluation of advanced computer-aided engineering tools
R H Bracewell and K Sheu 539

Impacts for modularization
J Thyssen and P K Hansen 547

Modularization of the control system in a mechatronic product
J P Aarnio and A O Riitahuhta 555

Sharing in design – categories, importance, and issues
A Chakrabarti 563

The K- and V-matrix method – an approach in analysis and description of variant products
L Bonguilelmi, P Henselcr, Ch Puls, and M Meier 571

Frameworks for the modular synthesis of mechanisms
C-P Liu and D-Z Chen 579

Sustainable Design
Sustainable Design
589
DFE for companies – an easy-to-use individualized method mix for DFE
M Ernzer, C Oberender, and H Birkhofer 589

Artifact system evolution – an approach to study sustainable product development
V Allada, R Rai, and L Jiang 597

US National Science Foundation panel report on international environmentally benign design and manufacturing
D L Thurston, T Gutowski, C Murphy, D Allen, D Bauer, B Bras, T Piwonka, P Sheng, J Sutherland, and E Wolff 605

Design for energy efficiency
T Gómez-Navarro, S Capuz-Rizo, P Ferrer-Gisbert, J L Vivancos-Bono, and M A Sánchez-Romero 613

A comparison of ecodesign potential in UK manufacturing industry sectors
M Simon and A Dixon 621

Optimization and cost-benefit analysis of product recovery cycles
F Giudice, G La Rosa, and A Risitano 629

A web portal e-design – a first model for co-operation among SMEs sited in underdeveloped regions
F Giampà, M L Luchi, M Muzzupappa, and S Rizzuti 637

Enhanced product design facilitating remanufacturing of two household appliances – a case study
E Sundin 645

Engineering design in the development of sustainable products
U Pighini and M Fargnoli 653

Design for recovery – evaluation of recovery aptitude of a vehicle
P Tonnelier, D Millet, M le Coq, and P Michaud 661

Life-cycle Assessment
669
Parametrized inventories for approximate life-cycle assessment
K Mueller and M Lampéth 669

Identification of environmental improvement options with the new ecodesign Product Investigation, Learning, and Optimization Tool (PILOT)
W Wimmer, H Schneider, P Fischer, and A Pieber 677

Integrating environmental product and process information into the supply chain
M Dick, O Weger, and H Birkhofer 685

A review of product lifetime optimization as an environmental tool
A M Chalkley, D Harrison, and E Billett 693

Customer-centred DFE
701
Designing for ecological consumer use: a case study of an interdisciplinary approach to eco-effective product design
O Weger, C Oberender, H Birkhofer, and J Sauer 701

Customer’s preferences, willingness to pay, and LCA valuations for environmentally friendly design
R Vidal, Ma D Bovea, N Georgantizis, and E Camacho 709

Decision making for component remanufacturing within product families
D Mangun and D L Thurston 717

Functional priorities in eco-design – quality function deployment, value analysis, and functional profile
J Lagerstedt and C Lutropp 725

Integrating Environmental Considerations in Product Development
733
A creative element – ecodesign tools for industrial design
V Lofthous and T Bhamra 733
Enhancing environmental friendliness of electrical consumer products – the effects of design-centred measures  
J Sauer, B S Wiese, and B Rüttinger  

Strategy-based design for environment – methodology and implementation in industry  
C Grüner, M Dick, and H Birkhofer  

Life-cycle planning for strategic evolution of eco-products  
H Kobayashi  

Redesign for the environment – methodology and determination of the redesign level  
A C P Bitencourt, A Ogliari, and F A Forcellini
