CONTENTS

Foreword ........................................................................................................................................ v

(A) The Activation Process ........................................................................................................... 1

Production of micro- and mesoporous activated carbon from paper mill sludge.
I. Effect of zinc chloride activation
N.R. Khalili, M. Campbell, G. Sandí and J. Golaś ................................................................. 3

Preparation of activated carbons from bituminous coals with CO\textsubscript{2} activation – influence of coal oxidation
H. Teng, J.-A. Ho and Y.-F. Hsu ......................................................................................... 15

Adsorbents for methane storage made by phosphoric acid activation of peach pits
J.A.F. MacDonald and D.F. Quinn ..................................................................................... 25

Preparation of activated carbon from bituminous coal with phosphoric acid activation
H. Teng, T.-S. Yeh and L.-Y. Hsu ..................................................................................... 31

Development of porosity in combined phosphoric acid-carbon dioxide activation
M. Molina-Sabio, F. Rodríguez-Reinoso, F. Caturla and M.J. Sellés ...................................... 41

Carbon honeycomb structures for adsorption applications
K.P. Gadkaree .................................................................................................................. 47

(B) Modifications to Porosity ...................................................................................................... 57

Coating of activated carbon with silicon carbide by chemical vapour deposition
R. Moene, H.Th. Boon, J. Schoonman, M. Makkee and J.A. Moulijn ...................................... 59

Effects of acid treatments on the pore and surface properties of Ni catalyst supported on activated carbon
S. Wang and G.Q. Lu ......................................................................................................... 73

Change of porous structure and surface state of charcoal as a result of coating with thin carbon layer
A. Oya, R. Horigome, D. Lozano-Castello and A. Linares-Solano ......................................... 83

(C) Properties of Activated Carbons .......................................................................................... 87

Characterizing the ignition process of activated carbon
Y. Suzin, L.C. Buettner and C.A. LeDuc ........................................................................... 89

Carbon structure and porosity of carbonaceous adsorbents in relation to their adsorption properties
F. Haghseresht, G.Q. Lu and A.K. Whittaker ...................................................................... 101

On surface of micropores and fractal dimension of activated carbon determined on the basis of adsorption and SAXS investigations
R. Diduszko, A. Swiatkowski and B.J. Trznadel ................................................................. 109
(D) Applications

Activated carbon for gas separation and storage
S. Sircar, T.C. Golden and M.B. Rao ................................................................. 121

Responding to changing conditions: how powdered activated carbon systems can provide the operational flexibility necessary to treat contaminated groundwater and industrial wastes
J.A. Meidl ................................................................. 133

Vapor adsorption on coal- and wood-based chemically activated carbons.
Part I. Surface oxidation states and adsorption of H₂O
W.H. Lee and P.J. Reucroft ................................................................. 143

Vapor adsorption on coal- and wood-based chemically activated carbons.
Part II. Adsorption of organic vapors
W.H. Lee and P.J. Reucroft ................................................................. 151

Vapor adsorption on coal- and wood-based chemically activated carbons.
Part III. NH₃ and H₂S adsorption in the low relative pressure range
W.H. Lee and P.J. Reucroft ................................................................. 157

Removal of SOₓ and NOₓ over activated carbon fibers
I. Mochida, Y. Korai, M. Shirahama, S. Kawano, T. Hada, Y. Seo, M. Yoshikawa and A. Yasutake ................................................................. 163

(E) Theoretical

Changes in PSD of progressively activated carbons obtained from their supercritical methane isotherms
K.A. Sosin, D.F. Quinn and J.A.F. MacDonald ................................................................. 179

Theoretical study of the performance of activated carbon in the presence of binary vapor mixtures
N. Vahdat ................................................................. 187

Application of the mono/multilayer and adsorption potential theories to coal methane adsorption isotherms at elevated temperature and pressure
C.R. Clarkson, R.M. Bustin and J.H. Levy ................................................................. 201

Applicability of adsorption equations to argon, nitrogen and volatile organic compound adsorption on to activated carbon
P.D. Paulsen, B.C. Moore and F.S. Cannon ................................................................. 219

A new model for the description of adsorption kinetics in heterogeneous activated carbon
D.D. Do and K. Wang ................................................................. 231

Dynamics of natural gas adsorption storage systems employing activated carbon
J.P. Barbosa Mota, A.E. Rodrigues, E. Saatdjian and D. Tondeur ................................................................. 247

Radial distribution function analysis of the structure of activated carbons
A. Burian, A. Ratuszna, J.C. Dore and S.W. Howells ................................................................. 259
Determination of fractal dimensions of solid carbons from gas and liquid phase adsorption isotherms
N.R. Khalili, M. Pan and G. Sandi .......................................................... 269

Adsorption dynamics of carbon dioxide on a carbon molecular sieve 5A
S.W. Rutherford and D.D. Do .............................................................. 285

Author Index .................................................................................. 297
