4. Application: Linear Response ........................................ 73
  4.1 Size Dependent Response .......................................... 73
    4.1.1 \textit{N} ‘Atoms’ in 1D, 2D and 3D Arrangements .......... 75
    4.1.2 Excitons in a Single Slab ................................. 82
    4.1.3 Excitons in a Single Sphere .............................. 90
    4.1.4 Resonant Bragg Scattering from a Finite Crystal ....... 99
  4.2 Cavity Mode Coupled with a Resonant Level .................. 107
    4.2.1 Atom Coupled with a Slab ................................ 108
    4.2.2 Atom Coupled with WG Modes ............................. 111
    4.2.3 Quantum Well Excitons in a Microcavity ................ 114
    4.2.4 Green Function for the Cavity Polariton ................ 117
  4.3 Resonant SNOM ...................................................... 121
    4.3.1 Configuration Resonance .................................. 122
    4.3.2 Breakdown of the Dipole Selection Rule in Reflection Mode .......... 125
  4.4 New Method of Photonic Band Calculation .................... 128
  4.5 Resonant Photonic Crystals .................................... 131

5. Application: Nonlinear Response ................................... 137
  5.1 Pump–Probe Spectroscopy ......................................... 140
    5.1.1 Pumping of Exciton Absorption ............................ 141
    5.1.2 Pumping of Exciton–Biexciton Transition ................ 146
  5.2 Degenerate Four-Wave Mixing .................................. 153
  5.3 Optical Bistability ................................................ 158

References ............................................................... 163
