László Böszörményi  Peter Schojer (Eds.)

Modular Programming Languages

Joint Modular Languages Conference, JMLC 2003
Klagenfurt, Austria, August 25-27, 2003
Proceedings

Springer
# Table of Contents

## Invited Talks

The Essence of Programming Languages ................................. 1  
*Niklaus Wirth*

Safe Code – It’s Not Just for Applets Anymore .......................... 12  
*Michael Franz*

Computing with Distributed Resources ................................... 23  
*Young-ri Choi, Siddhartha Rai, Vinay Sampath Kumar, Jayadev Misra, Harrick Vin*

The Verifying Compiler: A Grand Challenge for Computing Research 25  
*Tony Hoare*

Evolving a Multi-language Object-Oriented Framework: Lessons from .NET ......................................................... 36  
*Jim Miller*

## Architectural Concepts and Education

The KITE Application Server Architecture .............................. 37  
*Josef Templ*

Compiler Support for Reference Tracking in a Type-Safe DSM ........ 49  
*Ralph Goeckelmann, Stefan Frenz, Michael Schoettner, Peter Schulthess*

Caste: A Step beyond Object Orientation ................................ 59  
*Hong Zhu, David Lightfoot*

Distributed XML Objects .................................................... 63  
*Paul Roe*

Programming Education: A Russian Perspective ...................... 69  
*Fyodor Tkachov*

## Component Architectures

Towards an Adaptive Distributed Multimedia Streaming Server  
Architecture Based on Service-Oriented Components .................. 78  
*Roland Tusch*

A Layered Type System for Re-entrance Control ........................ 88  
*Simon Kent*
A Practical Approach to Software Portability Based on Strong Typing and Architectural Stratification ........................................... 98
Andrey Koltashev

Object Life-Cycle Management in a Highly Flexible Middleware System .......................................................... 102
Karl Blümlinger, Christof Dallermassl, Heimo Haub, Philipp Zambelli

Fighting Class Name Clashes in Java Component Systems ............... 106
Petr Hnětynka, Petr Tůma

Language Concepts

Real-Time Systems Development Using Hierarchical State Machines ..... 110
Angelo Furfaro, Libero Nigro, Francesco Pupo

Classboxes: A Minimal Module Model Supporting Local Rebinding ...... 122
Alexandre Bergel, Stéphane Ducasse, Roel Wuyts

Zonnon for .NET – A Language and Compiler Experiment ............... 132
Jürg Gutknecht, Eugene Zueff

Safely Extending Procedure Types to Allow Nested Procedures as Values .......................................................... 144
Christian Heinlein

Frameworks and Design Principles

Leveraging Managed Frameworks from Modular Languages............. 150
K. John Gough and Diane Corney

Systems = Components + Languages: Building a Flexible Real-Time Simulation and Test Environment ...................................... 163
Brian Kirk, Stuart Doyle, Toby Harris, Tom Priestley

Event Library: An Object-Oriented Library for Event-Driven Design .... 174
Volkan Arslan, Piotr Nienaltowski, Karine Arnout

Controlling Access to Distributed Object Frameworks ................. 184
Karl Blümlinger, Christof Dallermassl, Heimo Haub, Philipp Zambelli

Architectural Aspects of a Thread-Safe Graphical Component System Based on Aos .......................................................... 188
Thomas M. Frey

Compilers and Tools

LL(1) Conflict Resolution in a Recursive Descent Compiler Generator .... 192
Albrecht Wöß, Markus Löherbauer, Hanspeter Mössenböck
Graph Coloring vs. Optimal Register Allocation for Optimizing Compilers ............................................. 202
Ulrich Hirnschrott, Andreas Krall, Bernhard Scholz

A Source-to-Source Architecture for User-Defined Optimizations .................. 214
Markus Schördan, Dan Quinnan

An Oberon Linker for an Imperfect World – More Notes on Building Your Own Tools .................................................. 224
Paul Reed

Formal Aspects and Reflective Programming

Language Definition in the Schütz Semantic Editor .............................. 229
Rodney M. Bates

Demand-Driven Specification Partitioning ........................................ 241
Roland T. Mittermeir, Andreas Bollin

Source-to-Source Transformation in the Large .................................... 254
Thomas Genssler, Volker Kuttruff

Metaprogramming Library for the C# Programming Language ............ 266
Gergely Kis, József Orosz, Márton Pintér, Zoltán László,
Thomas Genssler

Author Index .................................................................................. 271
