POLICY-BASED NETWORK MANAGEMENT

Solutions for the Next Generation

John Strassner
Intelliden Corporation
Colorado Springs, Colorado
2.2.5 Why Object-Oriented Information Modeling is So Important to PBNM Systems 52
2.2.6 Basic Terminology 52
2.2.7 Object-Oriented Thinking 53

2.3 Conceptual Policy Model 53
2.4 Definition of a PBM System 56
2.5 Policy Terminology—An Approach 58

2.6 Essential Terminology for PBM Systems 59
2.6.1 Terms Relating to the Object-Oriented Foundations of PBM 60
2.6.2 The Main Worker Terms of Policy 63
2.6.3 Terms for Controlling Policy 68
2.6.4 Policy Container Terms 71
2.6.5 Terms Defining Roles, Policy Subjects, and Policy Targets 74

2.7 New Terminology Not Covered in RFC3198 78
2.8 Definition of Policy-Based Management 81
2.9 Definition of Policy-Based Network Management 81

2.10 High-Level Requirements of a PBNM System 81
2.10.1 Controlling Access to Shared Resources 81
2.10.2 Integrating the Business and Networking Worlds 83

2.11 Using Modeling Used to Solve Information Overload 84
2.11.1 Managing an Increased Number of Devices 84
2.11.2 Managing the Proliferation of Device-Specific functions 85
2.11.3 Using Models as Part of the PBNM Process 86
2.11.4 Sharing and Reuse of Data 88
2.11.5 Interfacing with Different Constituents 88
2.11.6 Interfacing with Devices and EMSs 89
2.11.7 Interfacing with NMSs 89
2.11.8 Interfacing with Other Portions of the OSS 90
2.11.9 Communication with Policy-Unaware Elements 91

2.12 Policy Used to Express Business Requirements 91
2.12.1 Individuality 92
2.12.2 Process versus Policy, or Process AND Policy 93

2.13 Summary 93
2.14 Recommended Further Reading and References 94

3 Policy Management and the Sharing of Data 97
3.1 Introduction 98
3.2 The Need to Express Information in a Common Way 98
3.2.1 Policy Information is Pervasive 99
3.2.2 Management Data, Applications, and Repositories 100
3.2.3 The End-to-End Provisioning Problem 105
3.2.4 The Operational Support System Dilemma 107
3.2.5 Problems in the Sharing and Reusing of Data 107
3.2.6 Providing an Information View 108
3.2.7 Expressing Policies 110

3.3 How to Solve Current Problems in Sharing and Reusing Data 115
3.3.1 Solving the Problems of Vendor-Specific CLI 116
3.3.2 Solving the Problems of Differing Programming Models 118
3.3.3 Communication Between OSS Components 119
3.4 Existing Approaches to Sharing Information 119
3.4.1 The DEN Approach 120
3.4.2 The IETF Approach 122
3.4.3 The DMTF Approach 125
3.4.4 Language Approaches 125
3.5 How to Express Information in a Common Way 127
3.5.1 Using Information and Data Models 127
3.5.2 Using Languages 130
3.5.3 What About a Policy Protocol? 133
3.5.4 The Recommended Approach 134
3.6 The New DEN-ng Approach 134
3.7 Summary 136
3.8 Recommended Further Reading and References 137

4 Policy Operation in a PBNM System 141
4.1 Introduction 142
4.2 Policy Communication 142
4.2.1 General Communication Issues 142
4.2.2 Assignment of Policies 145
4.2.3 Coordination of Different Policies 151
4.3 General Management Issues 151
4.3.1 Policy Categorization 151
4.3.2 How Policies Are Applied—Outsourced, Internal, or Interactive 157
4.3.3 An Application of Policy—Provisioned versus Signaled QoS 158
4.4 Policy Operation 159
4.4.1 Physical System Requirements 159
4.4.2 Logical System Requirements 159
4.4.3 Applicability of the Policy 160
4.4.4 Effect of Applying Policy 160
4.5 Musings on Implementation 174
4.5.1 Communications Issues 174
4.5.2 Assignment and Coordination of Policies 175
4.5.3 Scalability of PBNM Solutions 175
4.6 Summary 176
4.7 Recommended Further Reading and References 177

5 Representing High-Level Policies 179
5.1 Introduction 180
5.2 High-Level Policy Specification 180
5.2.1 Domains 180
5.2.2 The Use of Roles in Policies 182
5.3 Basic Policies for Specifying Business-Driven Behavior 186
5.3.1 Authorization Policies 186
5.3.2 Refrain Policies 189
5.3.3 Obligation Policies 190
5.3.4 Delegation Policies 191
5.3.5 Definition of Events in Ponder 193
5.3.6 Constraints in Ponder 193
5.3.7 Filtering Policies in Ponder 193
5.4 DEN-ng Additions to the Ponder Framework of Basic Policies 194
5.4.1 Generic Enhancements to All Types of Policies 195
5.4.2 DEN-ng Access Control Policies 200
5.4.3 DEN-ng Authentication Policies 202
5.4.4 DEN-ng Authorization Policies 204
5.4.5 DEN-ng Obligation Policies 205
5.4.6 Events in DEN-ng 206
5.4.7 Constraints in DEN-ng 207
5.4.8 Filtering Policies in DEN-ng 208
5.5 Composite Policies 208
5.5.1 Groups 210
5.5.2 Roles 212
5.5.3 Role Relationships 213
5.5.4 Management Structures 213
5.5.5 Other High-Level Policies 214
5.6 Use of High-Level Policies in a PBNM System 214
5.7 High-Level Policy Example 214
5.7.1 Approach 216
5.7.2 Equating Policies in the Business View 216
5.7.3 Equating Policies to Other Levels of the Policy Continuum—An Approach 219
5.8 Summary 223
5.9 Recommended Further Reading and References 225

6 Motivation for the DEN-ng Policy Model 227
6.1 Introduction 228
6.2 Motivation 228
6.2.1 Why Build Another Information Model? 228
6.2.2 The Role of Standards 230
6.2.3 Scope of Currently Available Information Models 232
6.3 The New DEN-ng Approach—Functional Requirements 238
6.3.1 Using Standards 238
6.3.2 Managing Devices from Different Vendors 239
6.3.3 Abstracting Different Device Functionality 240
6.3.4 Representing Different Constraints 240
6.3.5 Applying Different Policy Domains to the Same Device 242
6.4 The New DEN-ng Approach—Connecting the Business and System Viewpoints 242
6.4.1 Business Interactions 243
8 Components of a PBNM System 309
8.1 Introduction 310
8.2 Requirements of Different Policies on the PBNM System 310
8.2.1 Interoperability 310
8.2.2 Managing Networks, Not Just Device Interfaces 311
8.2.3 Use of Business Rules to Drive Network Configuration 312
8.2.4 Unification of Policy-Based Management and Process Management 312
8.2.5 The Importance of Sharing and Reusing Information 312
8.2.6 Communication 314
8.3 The Life of a Policy 314
8.3.1 First Things First 315
8.3.2 From the Network Manager’s Point-of-View 318
8.3.3 From the Network Element’s Point-of-View 321
8.3.4 Additional Life Cycle Aspects of a Policy 323
8.4 The Building Blocks of a PBNM System 323
8.4.1 Information Model 324
8.4.2 Policy Language 326
8.4.3 Data Dictionary 327
8.4.4 Putting It All Together: Model Driven Architectures 328
8.5 Architecture of a PBNM System 330
8.5.1 Overview of the Operation of the PBNM System 330
8.5.2 Policies are Static, Environments Are Dynamic 340
8.5.3 Scalability 340
8.5.4 Principles of Distributed Computing 343
8.5.5 Contracts 344
8.5.6 Input Tools 345
8.5.7 Policy Repository 348
8.5.8 Policy Broker 349
8.5.9 Policy Server 350
8.5.10 Messaging Subsystem 360
8.5.11 Operational Considerations for a PDP 361
8.6 Summary 362
8.7 Recommended Further Reading and References 364

9 Examples of Using the Policy Continuum 367
9.1 Introduction 368
9.2 Preliminaries 368
9.2.1 The Relationship Between DEN-ng and the SID 368
9.2.2 The Types of Entities Provided by DEN-ng and the SID 369
9.2.3 Policy and Process Management 370
9.2.4 Beginnings—What IS a VPN? 372
9.3 Brief Guide to DEN-ng 375
9.3.1 Product and Service 375
9.3.2 Product and Service Specifications 379
9.3.3 Resources and Resource Specifications 382
9.3.4 Resource Roles 388
9.3.5 Representing People and Organizations 390
Contents

11.6 Product Directions 470
   11.6.1 Point Product Examples 471
   11.6.2 Network Vendor Examples 473
   11.6.3 Management Platform Example 480
   11.6.4 Configuration Management and Service Activation—Intelliden Example 482

11.7 Recommended Further Reading and References 490

Appendix 1 Guide to UML 493

Appendix 2 Comments on Non-Essential Policy Terminology from RFC3198 499
