# Contents

4 Domain Growth in Systems with Quenched Disorder

4.1 Introduction .............................................. 73
4.2 Phase Ordering Systems with Quenched Disorder .......... 74
  4.2.1 Classification Scheme for Domain Growth Laws ......... 74
  4.2.2 Random-Exchange Ising Model (REIM) ................. 76
  4.2.3 Random-Field Ising Model (RFIM) ................... 80
4.3 Experimental Studies of Domain Growth with Disorder ..... 82
  4.3.1 Domain Growth in the REIM ......................... 83
  4.3.2 Domain Growth in the RFIM ......................... 84
4.4 Numerical Studies of Domain Growth with Disorder ..... 87
  4.4.1 Monte Carlo Simulations ............................ 88
  4.4.2 Simulations of Coarse-Grained Models ............... 89
  4.4.3 Domain Growth in the REIM ......................... 92
  4.4.4 Domain Growth in the RFIM ......................... 102

5 Surface-Directed Spinodal Decomposition and Surface Enrichment

5.1 Introduction ............................................. 105
5.2 Overview of Experimental Results ........................ 106
5.3 Theoretical Modeling .................................... 111
  5.3.1 Early Studies of Surface-Directed Spinodal Decomposition 111
  5.3.2 Model Hamiltonian and Static Formalism .............. 113
  5.3.3 Coarse-Grained Dynamical Model .................... 118
  5.3.4 Static Solutions for a Short-Ranged Surface Potential . 121
  5.3.5 Characterization of Surface-Directed Spinodal Decomposition 122
5.4 Analytical and Numerical Results ........................ 123
  5.4.1 Analytical Approaches to Early-time (Linear) Behavior 123
  5.4.2 Wetting for Critical Quenches ($\psi_0 = 0$) ......... 124
  5.4.3 Wetting by the Minority Component ($\psi_0 < 0$) ...... 127
  5.4.4 Wetting by the Majority Component ($\psi_0 > 0$) ...... 133
  5.4.5 Other Relevant Studies for Case of Diffusive Transport 135
  5.4.6 Role of Hydrodynamic Effects ....................... 136
5.5 Kinetics of Surface Enrichment for Stable Binary Mixtures... 140
5.6 Asymptotic Properties of Enrichment Profiles ........... 144

6 Phase Ordering Dynamics in the Complex Ginzburg-Landau Equation

6.1 Introduction ............................................. 147
6.2 Overview of Relevant Analytical Results ................... 148
6.3 Correlation Function for a Single-Spiral Morphology ....... 150
  6.3.1 Case with $\beta = 0$ .............................. 154
  6.3.2 Case with $\beta \neq 0$ ............................. 156
6.4 Numerical Results for $d = 2$ ........................... 159
