PULSED LASER DEPOSITION OF THIN FILMS
APPLICATIONS-LED GROWTH OF FUNCTIONAL MATERIALS

Edited by
Robert Eason
Optoelectronics Research Centre
University of Southampton, UK
CONTENTS

PREFACE xix
CONTRIBUTORS xxi

SECTION 1

1. Pulsed Laser Deposition of Complex Materials:
   Progress Toward Applications 3
   David P. Norton
   1.1 Introduction 3
   1.2 What Is PLD? 4
   1.3 Where Is Pulsed Laser Deposition Being Applied? 9
      1.3.1 Complex Oxide Film Growth 9
      1.3.2 Epitaxial Interface and Superlattice Formation 10
      1.3.3 Superconducting Electronic Devices 11
   1.4 Exploring Novel Oxide Devices Concepts 14
      1.4.1 Tunable Microwave Electronics 15
      1.4.2 Wide Bandgap Electronics 17
   1.5 Thin-Film Optics 20
   1.6 Oxide Sensor Devices 21
   1.7 Protective Coatings and Barriers 23
      1.7.1 Biocompatible Coatings 24
   1.8 Nanomaterial Synthesis 25
   1.9 Polymer and Organic Thin Films 26
      1.9.1 Biological Thin-Film Materials 27
   1.10 Summary 28
   References 28

SECTION 2

2. Resonant Infrared Pulsed Laser Ablation and Deposition
   of Thin Polymer Films 35
   Daniel-Dennis McAlevy Bubb and Richard F. Haglund, Jr.
   2.1 Technological Significance of Organic Thin-Film Deposition 36
   2.2 Laser-Based Methods for Deposition of Polymer Thin Films: An Overview 37
      2.2.1 Pulsed Laser Deposition with UV Lasers 37
      2.2.2 Matrix-Assisted Pulsed Laser Evaporation 37

References
2.2.3 Photosensitized Ablation and Deposition 38
2.2.4 Resonant Infrared Pulsed Laser Deposition 39
2.2.5 Summary of Techniques 41

2.3 Deposition, Ablation, and Characterization of Selected Polymers 41
2.3.1 Characterization of Deposited Material 41
2.3.2 Choice of Polymers for Early Studies 44
2.3.3 Polyethylene Glycol 44
2.3.4 Polystyrene 47
2.3.5 Deposition of Application-Oriented Polymers by RIR-PLD 49

2.4 Mechanism of Resonant Infrared Laser Ablation 56
2.5 Lasers for Infrared Laser Ablation and Deposition 58
2.6 Conclusions 59
References 60

3. Deposition of Polymers and Biomaterials Using the Matrix-Assisted Pulsed Laser Evaporation (MAPLE) Process 63
Alberto Piqué
3.1 Introduction 63
3.2 Limitations of PLD for the Growth of Organic Thin Films 64
3.3 Fundamentals of the MAPLE Process 64
3.3.1 Growth of Polymer Thin Films 68
3.3.2 Growth of Biomaterial Thin Films 72
3.4 Current Status of MAPLE: Challenges and Opportunities 75
3.5 Future of MAPLE 79
3.6 Summary 82
References 82

4. In Situ Diagnostics by High-Pressure RHEED During PLD 85
Guus Rijnders and Dave H. A. Blank
4.1 Introduction 85
4.2 Basic Principles 85
4.3 High-Pressure RHEED 87
4.3.1 Geometry and Basic Principles of RHEED 87
4.3.2 Utility of RHEED: Surface Properties 90
4.3.3 Utility of RHEED: Monitoring Thin-Film Growth 92
4.4 High-Pressure RHEED Setup 93
4.5 Conclusions 96
References 97

5. Ultrafast Laser Ablation and Film Deposition 99
Eugene G. Gamaly, Andrei V. Rode, and Barry Luther-Davies
5.1 Introduction 99
5.2 Ablation by Short Independent Laser Pulses and Deposition of Films 101
5.2.1 Short-Pulse Laser–Matter Interaction 101
5.2.2 Ablation Mechanisms 105
5.2.3 Ablation Thresholds 107
5.2.4 Ablation Rate, Mass, and Depth 110
5.2.5 Atomization of Laser Plume: Spatial Pulse Shaping 111
5.3 Cumulative Ablation of Solids by High-Repetition-Rate Short-Pulse Lasers 117
  5.3.1 Dwell Time and Number of Pulses per Focal Spot 118
  5.3.2 Smoothing of the Evaporation Conditions on the Surface 119
  5.3.3 Ablation in Air and in Vacuum 119
5.4 Experimental Results: Deposition of Thin Films by Short-Pulse MHz Repetition Rate Laser 121
  5.4.1 Deposition of Amorphous Carbon Films 121
  5.4.2 Deposition of Chalcogenide Glass Films 122
5.5 Short-Pulse High-Repetition-Rate Laser Systems 123
  5.5.1 Table-top 50-W Solid-State Ultrafast Laser System 124
  5.5.2 Free-Electron Laser 125
5.6 Concluding Remarks 126
References 127

6. Cross-Beam PLD: Metastable Film Structures from Intersecting Plumes 131
André Gorbunoff

6.1 Introduction 131
  6.1.1 Energetic Particles in PLD 131
  6.1.2 Origin of Metastable Film Structures in PLD 134
6.2 Technique of Cross-Beam PLD 137
  6.2.1 Basic Idea and Instrumentation 137
  6.2.2 Spatio-energetical Characteristics of the Plume in CBPLD 139
6.3 Nanoscale Multilayer Deposition 144
  6.3.1 Morphological and Compositional Roughness in PLD 145
  6.3.2 Determination of the Compositional Profile 145
6.4 Abnormal Phase Formation in Co-deposited Alloys 149
  6.4.1 Amorphous Fe–Al Alloys 149
  6.4.2 Paramagnetic Fe–Cr Alloys 151
6.5 Conclusions 156
References 158

7. Combinatorial Pulsed Laser Deposition 161
Ichiro Takeuchi

7.1 Introduction 161
7.2 Combinatorial Approach to Materials 162
7.3 Pulsed Laser Deposition for Fabrication of Combinatorial Libraries 163
7.4 Synthesis Technique Using Thin-Film Precursors 163
7.5 High-Throughput Thin-Film Deposition 166
7.6 Combinatorial Laser Molecular Beam Epitaxy 168
7.7 Composition Spreads and Combinatorial Materials Science 171
7.8 Conclusion 175
References 175

8. Growth Kinetics During Pulsed Laser Deposition 177
Guus Rijnders and Dave H. A. Blank

8.1 Introduction 177
8.2 Growth Modes at Thermodynamic Equilibrium 177
CONTENTS

8.3 Growth Kinetics
   8.3.1 Homoepitaxial Growth Modes
   8.3.2 Homoepitaxial Growth Study of SrTiO₃

8.4 Pulsed Laser Interval Deposition

8.5 Conclusions

References

9. Large-Area Commercial Pulsed Laser Deposition
   Jim Greer
   9.1 Introduction
   9.2 Advances in Large-Area PLD Films
   9.3 Issues with Scale-Up for PLD
      9.3.1 Intelligent Windows
      9.3.2 Substrate Heaters
      9.3.3 Heaters for Coated Conductors
      9.3.4 Target Size and Manipulation
      9.3.5 Target Manipulation for Coated Conductors
      9.3.6 Deposition Rate Monitors
   9.4 Commercial Systems
   9.5 Commercial Components
   9.6 Conclusions

SECTION 3

10. Coating Powders for Drug Delivery Systems
    Using Pulsed Laser Deposition
    James D. Talton, Barbel Eppler, Margaret I. Davis, Andrew L. Mercado,
    and James M. Fitz-Gerald
    10.1 Introduction
    10.2 Background
       10.2.1 Wet Powder Coating Techniques
       10.2.2 Dry Powder Coating Techniques
       10.2.3 Deposition of Polymer Thin Films
    10.3 Laser-Assisted Methods of Coating Particles
       10.3.1 Experimental Configurations
       10.3.2 Polymeric Coating Materials
       10.3.3 Particle Fluidization
    10.4 Microencapsulated Pharmaceutical Formulations
       10.4.1 Characterization of Deposited Polymers
       10.4.2 Microencapsulated Inhaled Therapies
    10.5 Manufacturing and Scaleup
    10.6 Summary

References

11. Transparent Conducting Oxide Films
    Heungsoo Kim
    11.1 Introduction
CONTENTS

11.2 Unique Properties of TCO Films 240
  11.2.1 Electrical Properties 240
  11.2.2 Optical Properties 240
11.3 Advantages of PLD for TCO Films 241
11.4 Optimum PLD Conditions for TCO Films 242
  11.4.1 Substrate Deposition Temperature 242
  11.4.2 Oxygen Deposition Pressure 243
  11.4.3 Film Thickness 244
  11.4.4 Other Laser Conditions 244
11.5 Laser-Deposited TCO Films 245
  11.5.1 ITO Films 245
  11.5.2 Undoped and Doped ZnO Films 250
  11.5.3 Other n-Type TCO Films 251
  11.5.4 p-Type TCO Films 251
11.6 Applications of TCO Films 253
  11.6.1 Display Devices 253
  11.6.2 Photovoltaic Devices 256
  11.6.3 Transparent Thin-Film Field-Effect Transistor (FET) 257
11.7 Conclusion and Future Directions 258
References 258

12. ZnO and ZnO-Related Compounds 261
  Jacques Perrière, Eric Millon, and Valentin Craciun

  12.1 Introduction 261
  12.2 ZnO Thin-Film Growth by PLD: General Features 262
    12.2.1 Historical Background 262
    12.2.2 Surface Morphology and Texture 264
    12.2.3 Control of the Stoichiometry 265
    12.2.4 Recent Applications and Developments 267
  12.3 ZnO Epitaxial Thin Films 268
    12.3.1 ZnO Epitaxial Growth on Sapphire 269
    12.3.2 ZnO Epitaxial Growth on Other Substrates 273
    12.3.3 Epitaxial Growth of ZnO-Related Compounds 274
    12.3.4 Main Applications of Epitaxial ZnO Films 275
  12.4 ZnO Nanocrystalline Films 278
    12.4.1 Nanosecond PLD under High Oxygen Pressure 279
    12.4.2 Femtosecond PLD 281
    12.4.3 Applications of Nanocrystalline ZnO Films 282
  12.5 Conclusions and Future Perspectives 284
References 285

  Donagh O’Mahony and James G. Lunney

  13.1 Introduction 291
  13.2 Properties of Group III Nitrides and Group III Metals 292
    13.2.1 Group III Nitrides 292
    13.2.2 Thermal Decomposition of Group III Nitrides 292
13.2.3 Group III Elements: Al, Ga, and In 294
13.2.4 Target Preparation 295
13.3 Laser Ablation of Group III Nitrides and Group III Metals 295
13.3.1 General Characteristics of the Ablation Process in PLD 295
13.3.2 Characteristics of the Ablation Process in Vacuum 296
13.3.3 Plume-Background Gas Interaction 298
13.4 Guidelines for Film Growth 300
13.4.1 Setting the Growth Parameters 300
13.4.2 Film Growth in N₂ 301
13.4.3 Film Growth in Other Atmospheres 301
13.4.4 Substrates and Growth Temperature 302
13.5 Selective Review of the Properties of AlN, GaN, and InN Films Grown by PLD 302
13.5.1 Structural Properties 302
13.5.2 Electronic Properties 304
13.5.3 Optical Properties 304
13.6 Novel Areas of Research 305
13.6.1 Composites for Electronic and Optoelectronic Applications 305
13.6.2 Magnetic Doping: Diluted Magnetic Semiconductors for Spin Electronics 306
13.7 Summary and Outlook 307
References 308

14. Pulsed Laser Deposition of High-Temperature Superconducting Thin Films and Their Applications 313
Bernd Schey
14.1 Introduction 313
14.2 High-Temperature Superconductor Devices for Electronic and Medical Applications 314
14.2.1 High-Temperature Superconductor Communication 314
14.2.2 Digital Electronics 318
14.2.3 SQUID Systems 320
14.3 Electric Power and Energy 323
14.3.1 Applications of Coated Conductors 323
14.3.2 Coated Conductors: State of Development 324
14.3.3 Future Trends 326
14.4 Potential of PLD in the Commercialization of HTS 326
References 327

15. Diamond-Like Carbon: Medical and Mechanical Applications 333
Roger J. Narayan
15.1 Introduction 333
15.2 Physical and Chemical Properties of Carbon 333
15.3 Pulsed Laser Deposition of DLC 335
15.3.1 Effect of Wavelength and Fluence 335
15.3.2 Effect of Substrate Temperature and Vacuum 336
15.4 Modifications to the Pulsed Laser Deposition Technique 338
15.5 Growth of DLC Films 339
15.6 Reducing Internal Compressive Stress in DLC Thin Films 340
CONTENTS  

15.7 Hydrogenated and Hydrogen-Free DLC 344
15.8 Properties of DLC 346
15.9 DLC Applications 347
   15.9.1 Medical Applications 347
   15.9.2 Mechanical and Tribological Applications 352
15.10 Closing Remarks 355
References 355

16. Pulsed Laser Deposition of Metals 363
Hans-Ulrich Krebs

16.1 Introduction 363
16.2 Deposition Technique 363
   16.2.1 Typical Setup 363
   16.2.2 Droplet Reduction 364
16.3 Energetic Particles 365
   16.3.1 Formation of Energetic Particles 365
   16.3.2 Influence on Film Growth 367
16.4 Deposition in Ultrahigh Vacuum 368
   16.4.1 Deposition Rate and Angular Distribution 368
   16.4.2 Stoichiometry Transfer 369
   16.4.3 Homogeneity of Alloy Films 369
   16.4.4 Improved Film Growth 369
   16.4.5 Small Grain Size 371
   16.4.6 Internal Stress 371
   16.4.7 Defect Formation 371
   16.4.8 Interface Mixing 372
   16.4.9 Interface Roughness 372
   16.4.10 Metastable Phase Formation at Interfaces 372
   16.4.11 Resputtering Effects 373
16.5 Deposition in Inert Gas Atmosphere 373
   16.5.1 Reduction of Implantation and Resputtering 373
   16.5.2 Changes in the Deposition Rate 373
   16.5.3 Changes of Film Properties 374
16.6 Potential for Applications 375
   16.6.1 Nonequilibrium Phases 375
   16.6.2 Giant Magnetoresistance 376
   16.6.3 Soft and Hard Magnetic Materials 376
   16.6.4 X-ray Mirrors 378
   16.6.5 Compound Materials 378
16.7 Conclusions 379

17. Optical Waveguide Growth and Applications 385
Robert W. Eason, Stephen J. Barrington, Christos Grivas,
Timothy C. May-Smith, and David P. Shepherd

17.1 Introduction 385
17.2 Thin-Film Waveguide Fabrication Methods 386
   17.2.1 Waveguide Growth on an Existing Substrate 386
17.2.2 Waveguide Definition in an Existing Host 387
17.2.3 Pulsed Laser Deposition Waveguide Growth 387
17.3 Waveguide Structures 388
17.4 Optical Quality and Waveguide Loss 390
17.4.1 Waveguide Loss 391
17.4.2 Loss Measurement Techniques 392
17.4.3 Particulates on the Waveguide Surface 394
17.5 Waveguides Grown by PLD 396
17.5.1 Garnets 396
17.5.2 Oxide Materials 398
17.5.3 Ferroelectrics 399
17.5.4 Glasses 400
17.5.5 Semiconductors 400
17.6 Waveguide Lasing Devices 401
17.6.1 Introduction to PLD Waveguide Lasers and Active Optical Devices 401
17.6.2 Pulsed Laser Deposition Grown Waveguide Lasers 402
17.6.3 Future Directions 413
17.7 Conclusions and Closing Remarks: Tips for Successful Waveguide Growth 415
