Preface ............................................. xi  
Dependence Among Chapters .................... xiv  
Guide for the Reader ............................ xv  
List of Figures ................................... xviii  
Acknowledgments .................................. xix  
Standard Notation ............................... xxi  

### I. THEORY OF CALCULUS IN ONE REAL VARIABLE

1. Review of Real Numbers, Sequences, Continuity .................. 2  
2. Interchange of Limits ................................ 13  
3. Uniform Convergence ................................ 15  
4. Riemann Integral ................................ 26  
5. Complex-Valued Functions .......................... 41  
6. Taylor’s Theorem with Integral Remainder ..................... 43  
7. Power Series and Special Functions ....................... 44  
8. Summability ..................................... 53  
9. Weierstrass Approximation Theorem ....................... 58  
10. Fourier Series ................................... 61  
11. Problems ....................................... 78  

### II. METRIC SPACES

1. Definition and Examples ................................ 83  
2. Open Sets and Closed Sets .......................... 91  
3. Continuous Functions ............................. 95  
4. Sequences and Convergence ........................ 97  
5. Subspaces and Products ........................... 102  
6. Properties of Metric Spaces ....................... 105  
7. Compactness and Completeness ..................... 108  
8. Connectedness .................................. 115  
9. Baire Category Theorem ........................... 117  
10. Properties of $C(S)$ for Compact Metric $S$ .......... 121  
11. Completion ..................................... 127  
12. Problems ....................................... 130

X. TOPOLOGICAL SPACES (Continued)

7. Urysohn’s Lemma 474
8. Metrization in the Separable Case 476
9. Ascoli–Arzelà and Stone–Weierstrass Theorems 477
10. Problems 480

XI. INTEGRATION ON LOCALLY COMPACT SPACES 485

1. Setting 485
2. Riesz Representation Theorem 490
3. Regular Borel Measures 504
4. Dual to Space of Finite Signed Measures 509
5. Problems 517

XII. HILBERT AND BANACH SPACES 520

1. Definitions and Examples 520
2. Geometry of Hilbert Space 526
3. Bounded Linear Operators on Hilbert Spaces 535
4. Hahn–Banach Theorem 537
5. Uniform Boundedness Theorem 543
6. Interior Mapping Principle 545
7. Problems 549

APPENDIX 553

A1. Sets and Functions 553
A2. Mean Value Theorem and Some Consequences 559
A3. Inverse Function Theorem in One Variable 561
A4. Complex Numbers 563
A5. Classical Schwarz Inequality 563
A6. Equivalence Relations 564
A7. Linear Transformations, Matrices, and Determinants 565
A8. Factorization and Roots of Polynomials 568
A9. Partial Orderings and Zorn’s Lemma 573
A10. Cardinality 577
