List of Figures

List of Tables

Preface

Acknowledgments

1. Introduction

1.1 Brief historical review

1.2 Typical material

1.3 Typical manufacturing process

1.4 Typical product types

1.5 Characteristics of LTCC

1.5.1 High frequency characteristics

1.5.2 Thermal stability

(low thermal expansion, good thermal resistance)

1.5.3 Integration of passive components

1.6 Trends in materials developed by relevant companies

1.7 Subject of the book

References

Part 1 Material technology

2. Ceramic material

2.1 Introduction

2.2 Low temperature firing

2.2.1 Fluidity of glass

2.2.2 Crystallization of glass

2.2.3 Foaming of glass

2.2.4 Reaction between glass and ceramic

2.3 Dielectric characteristics

2.3.1 Dielectric constant

2.3.2 Dielectric loss

2.4 Thermal expansion

2.5 Mechanical strength
# Contents

6. Casting  
6.1 Introduction  
6.2 Casting equipment  
6.3 Slurry characteristics  
6.4 Green sheet  
6.4.1 Characteristics required of green sheets  
6.4.2 Green sheet evaluation methods  
6.4.3 Various factors affecting the characteristics of green sheets  
6.4.4 Green sheet microstructure  
6.4.5 Green sheet dimensional stability  
6.5 Via hole punching  
References

7. Printing and laminating  
7.1 Printing  
7.1.1 Screen printing screen specifications  
7.1.2 Printing process conditions  
7.1.3 Paste characteristics  
7.1.4 Green sheet characteristics  
7.2 Via filling  
7.3 Laminating  
7.3.1 Laminating process technologies  
7.3.2 Faults arising in the laminating process  
7.3.3 Preventing delamination  
References

8. Cofiring  
8.1 Sintering the copper  
8.2 Controlling firing shrinkage  
8.3 Mismatches of firing behavior and firing shrinkage rate  
8.4 Achieving both antioxidation of the copper and elimination of binder  
8.5 Non-shrinkage process  
8.6 Cofiring process and future LTCCs  
References

9. Reliability  
9.1 Thermal shock of LTCCs  
9.2 Thermal expansion and residual stress of LTCCs  
9.3 Thermal conductivity of LTCCs  
References
10. **Future of LTCCs**
   10.1 Introduction
   10.2 Technology development of LTCCs for the future
       10.2.1 Materials technology development
       10.2.2 Process technologies
   10.3 Background of post-LTCC technology
       10.3.1 AD process as a post-LTCC technology
       10.3.2 Current and future state of development of AD ceramic film
