Dimension Reduction of Large-Scale Systems
Proceedings of a Workshop held in Oberwolfach, Germany, October 19–25, 2003

With 95 Figures and 29 Tables
Contents

Part I Papers

1 Model Reduction Based on Spectral Projection Methods
   Peter Benner, Enrique S. Quintana-Ortí .......................... 5

2 Smith-Type Methods for Balanced Truncation of Large Sparse Systems
   Serkan Gugercin, Jing-Rebecca Li .............................. 49

3 Balanced Truncation Model Reduction for Large-Scale Systems in Descriptor Form
   Volker Mehrmann, Tatjana Stykel ............................. 83

4 On Model Reduction of Structured Systems
   Danny C. Sorensen, Athanasios C. Antoulas ..................... 117

5 Model Reduction of Time-Varying Systems
   Younes Chahlaoui, Paul Van Dooren ............................. 131

6 Model Reduction of Second-Order Systems
   Younes Chahlaoui, Kyle A. Gallivan, Antoine Vandendorpe, Paul Van Dooren ............................. 149

7 Arnoldi Methods for Structure-Preserving Dimension Reduction of Second-Order Dynamical Systems
   Zhaojun Bai, Karl Meerbergen, Yangfeng Su ...................... 173

8 Padé-Type Model Reduction of Second-Order and Higher-Order Linear Dynamical Systems
   Roland W. Freund .................................................. 191

9 Controller Reduction Using Accuracy-Enhancing Methods
   Andras Varga ......................................................... 225
10 Proper Orthogonal Decomposition Surrogate Models for Nonlinear Dynamical Systems: Error Estimates and Suboptimal Control
Michael Hinze, Stefan Volkwein

Part II Benchmarks

11 Oberwolfach Benchmark Collection
Jan G. Korvink, Evgenii B. Rudnyi

12 A File Format for the Exchange of Nonlinear Dynamical ODE Systems
Jan Lienemann, Behnam Salimbahrami, Boris Lohmann, Jan G. Korvink

13 Nonlinear Heat Transfer Modeling
Jan Lienemann, Amirhossein Yousefi, Jan G. Korvink

14 Microhotplate Gas Sensor
Jürgen Hildenbrand, Tamara Bechtold, Jürgen Wüllenstein

15 Tunable Optical Filter
Dennis Hohlfeld, Tamara Bechtold, Hans Zappe

16 Convective Thermal Flow Problems
Christian Moosmann, Andreas Greiner

17 Boundary Condition Independent Thermal Model
Evgenii B. Rudnyi, Jan G. Korvink

18 The Butterfly Gyro
Dag Billger

19 A Semi-Discretized Heat Transfer Model for Optimal Cooling of Steel Profiles
Peter Benner, Jens Saak

20 Model Reduction of an Actively Controlled Supersonic Diffuser
Karen Willcox, Guillaume Lassaux

21 Second Order Models: Linear-Drive Multi-Mode Resonator and Axi Symmetric Model of a Circular Piston
Zhaojun Bai, Karl Meerbergen, Yangfeng Su

22 RCL Circuit Equations
Roland W. Freund
23 PEEC Model of a Spiral Inductor Generated by Fasthenry
Jing-Rebecca Li, Mattan Kamon ........................................373

24 Benchmark Examples for Model Reduction of Linear
Time-Invariant Dynamical Systems
Younes Chahlaoui, Paul Van Dooren .................................379

Index ..............................................................................393
