CONTENTS

List of Symbols xv

1 Introduction and a Brief Review of Experimental Systems 1
   1 Generalities 1
   2 A Brief Description of Systems and Fabrication Methods 4

2 Quantum Transport, Anderson Localization 9
   1 Basic Concepts 9
      1.1 Localization Ideas 11
   2 Thermally Activated Conduction in the Localized Regime 15
   3 The Thouless Picture, Localization in Thin Wires and Finite Temperature Effects 17
   4 The Scaling Theory of Localization and its Consequences 21
      4.1 General 21
      4.2 The Case $d \leq 2$ 23
      4.3 The Case $d > 2$, the M–I Transition 24
   5 The Weakly Localized Regime 29

3 Dephasing by Coupling with the Environment, Application to Coulomb Electron–Electron Interactions in Metals 32
   1 Introduction and Review of the Principles of Dephasing 32
   2 Dephasing by the Electron–Electron Interaction 40
   3 Review of Results in Various Dimensions 45
   4 Dephasing Time vs. Electron–Electron Scattering Time 50
   5 A Useful Expression for the Dephasing Rate and a Discussion of the $T \to 0$ Limit 53

4 Mesoscopic Effects in Equilibrium and Static Properties 58
   1 Introductory Remarks, Thermodynamic Fluctuation Effects 58
   2 Quantum Interference in Equilibrium Properties, Persistent Currents 62
      2.1 Generalities, Simple Situations 62
      2.2 Independent Electrons in Disordered Systems 68
      2.3 The Semiclassical Picture 72
      2.4 General Results on Ensemble-averaged Persistent Currents for Constant $N$ 76
      2.5 Semiclassical Theory of Spectral Correlations, Applications to Rings 78
      2.6 Interaction Effects on the Persistent Currents 80
CONTENTS

5 Quantum Interference Effects in Transport Properties, the Landauer Formulation and Applications 84
1 Generalities, Remarks on the Kubo Conductivity for Finite Systems 84
2 The Landauer-type Formulation for Conductance in a Mesoscopic System and Some of its Generalizations 87
   2.1 Introduction: The "Single-channel" Case 87
   2.2 The Multichannel Landauer Formulation 90
   2.3 The Onsager-type Relationship in a Magnetic Field: Generalized Multiterminal Conductance Formulas 97
3 Applications of the Landauer Formulation 100
   3.1 Series Addition of Quantum Resistors, 1D Localization 100
   3.2 Parallel Addition of Quantum Resistors, A−B Oscillations of the Conductance 103
   3.3 On the Universality of the Conductance Fluctuations 112

6 The Quantum Hall Effect 116
1 Introduction 116
2 General Arguments 121
3 Localization in Strong Magnetic Fields and the QHE 125
4 Brief Remarks on the Fractional Quantum Hall Effect (FQHE) 129

7 Mesoscopics with Superconductivity 137
1 Introduction 137
2 Superconducting Rings and Thin Wires 140
3 Weakly Coupled Superconductors, the Josephson Effect and SNS Junctions 149
   3.1 The Bloch Picture 149
   3.2 The Josephson Junction and Other Weak Links 151
4 Brief Remarks on Vortices 154
5 The Andreev Reflection, More on SN and SNS Junctions 155

8 Noise in Mesoscopic Systems 164
1 Introduction 164
2 Shot-Noise for "Radiation" from a Reservoir 166
3 Low-Frequency (1/ƒ) Noise 169
4 Quantum Theory of Noise Correlators 173
   4.1 Introduction and Generalities 173
   4.2 Thermal Flows Between Coupled Systems 175
   4.3 An Antenna Coupled to an EM Field with an Arbitrary Number of Photons 176
   4.4 The Detection of Quantum Noise 176
   4.5 Derivation of the Basic Noise Results in the Quantum Domain 177

9 Concluding Remarks 184
CONTENTS

Appendices

A The Kubo, Linear Response, Formulation 191
B The Kubo–Greenwood Conductivity and the Edwards–Thouless Relationships 194
C The Aharonov–Bohm Effect and the Byers–Yang and Bloch Theorem 195
D Derivation of Matrix Elements in the Diffusion Regime 196
E A more Careful Treatment of Dephasing in 2D Conductors at Low Temperatures 197
F Anomalies in the Density of States (DOS) 198
G Quasiclassical Theory of Spectral Correlations 200
H Details of the Four-Terminal Formulation 202
I Universality of the Conductance Fluctuations in Terms of the Universal Correlation
   of Transmission Eigenvalues 203
J The Conductance of Ballistic “Point Contacts” 205
