# Fuzzy Control

Fundamentals, Stability  
and Design of Fuzzy Controllers

 Springer

---

# Contents

<b>1</b>	<b>Fundamentals of Fuzzy Systems</b> .....	<b>1</b>
1.1	Fuzzy Sets .....	2
1.2	Representation of Fuzzy Sets .....	5
1.2.1	Definition Using Functions .....	5
1.2.2	Level Sets .....	7
1.3	Fuzzy Logic .....	9
1.3.1	Propositions and Truth Values .....	11
1.3.2	t-Norms and t-Conorms .....	13
1.3.3	Basic Assumptions and Problems .....	18
1.4	Operations on Fuzzy Sets .....	19
1.4.1	Intersection .....	19
1.4.2	Union .....	21
1.4.3	Complement .....	22
1.4.4	Linguistic Modifiers .....	23
1.5	The Extension Principle .....	24
1.5.1	Mappings for Fuzzy Sets .....	25
1.5.2	Mapping of Level Sets .....	27
1.5.3	Cartesian Product and Cylindric Extension .....	29
1.5.4	Extension Principle for Multivariate Mappings .....	30
1.6	Fuzzy Relations .....	31
1.6.1	Crisp Relations .....	31
1.6.2	Application of Relations and Deduction .....	32
1.6.3	Chains of Deductions .....	36
1.6.4	Simple Fuzzy Relations .....	37
1.6.5	Composition of Fuzzy Relations .....	41
1.7	Similarity Relations .....	43
1.7.1	Fuzzy Sets and Extensional Hulls .....	45
1.7.2	Scaling Concepts .....	46
1.7.3	Interpretation of Fuzzy Sets .....	50

<b>2</b>	<b>Fundamentals of Control Theory</b>	57
2.1	Basic Concepts	57
2.2	The Model of the Plant	61
2.2.1	General Task	61
2.2.2	Scaling	62
2.2.3	Fundamental Linear Transfer Elements	63
2.2.4	Fundamental Nonlinear Transfer Elements	65
2.2.5	First and Second Order Lags	67
2.2.6	Fields of Application	71
2.2.7	Linearization	72
2.2.8	Closing Comments	73
2.3	Transfer Function	74
2.3.1	Laplace Transformation	74
2.3.2	Computation of Transfer Functions	76
2.3.3	Interpretation of the Transfer Function	78
2.3.4	Computation of the Step Response	79
2.3.5	Simplification of a Transfer Function	83
2.4	Frequency Response	84
2.4.1	Introduction to the Frequency Response	84
2.4.2	Nyquist Plot	86
2.4.3	Bode Diagram	90
2.5	Stability of Linear Systems	91
2.5.1	A Definition of Stability	91
2.5.2	Stability of a Transfer Function	93
2.5.3	Stability of a Control Loop	94
2.5.4	Criterion of Cremer, Leonhard and Michailow	96
2.5.5	Nyquist Criterion	98
2.6	PID Controller	102
2.6.1	Demands on a Controller	102
2.6.2	Types of Controllers	106
2.6.3	Controller Design	113
2.6.4	Structure Expansion	116
2.7	State Space Description and State Space Control	125
2.7.1	Fundamentals	125
2.7.2	Controllability and Observability	134
2.7.3	Lyapunov's Definition of Stability for Linear Systems	138
2.7.4	Design of a State Space Controller	141
2.7.5	Linear Observers	146
2.7.6	Steady-State Accuracy of State Space Controllers	149
2.7.7	Norm-Optimal Controllers	151
2.8	Nonlinear Systems	157
2.8.1	Features of Nonlinear Systems	157
2.8.2	Application of Linear Methods to Nonlinear Systems	158
2.8.3	Switching Elements	165
2.8.4	Definition of Stability for Nonlinear Systems	177

2.8.5	Lyapunov's Direct Method	185
2.8.6	Describing Function	189
2.8.7	Popov Criterion	202
2.8.8	Circle Criterion	210
2.8.9	Hyperstability	218
2.8.10	Sliding Mode Controllers	228
2.8.11	Nonlinear Observers	232
<b>3</b>	<b>Design of Fuzzy Controllers</b>	<b>235</b>
3.1	Mamdani Controllers	235
3.1.1	Remarks on Fuzzy Controller Design	240
3.1.2	Defuzzification Methods	243
3.2	Takagi-Sugeno-Kang Controllers	245
3.3	Logic-based Controllers	246
3.4	Mamdani Controllers and Similarity Relations	249
3.4.1	Interpretation of a Controller	249
3.4.2	Construction of a Controller	251
3.5	Fuzzy Control versus Classical Control	253
<b>4</b>	<b>Stability Analysis of Fuzzy Controllers</b>	<b>257</b>
4.1	Preliminaries	257
4.1.1	Structure of the Closed-Loop System	257
4.1.2	Analytic Approximation of a Fuzzy Controller	259
4.1.3	Takagi-Sugeno-Kang Systems	261
4.2	Lyapunov's Direct Method	266
4.2.1	Application to Conventional Fuzzy Controllers	266
4.2.2	Application to Takagi-Sugeno-Kang Controllers	268
4.2.3	Application to Facet Functions	279
4.3	Describing Function	284
4.4	Popov Criterion	286
4.5	Circle Criterion	287
4.5.1	Controllers with One Input Quantity	287
4.5.2	Controllers of Multiple Input Quantities	287
4.5.3	MIMO Controllers	290
4.6	Norm-based Stability Analysis	291
4.7	Hyperstability Criterion	294
4.8	A Comparison with the Sliding Mode Controller	295
4.9	Direct Analysis in State Space	298
4.9.1	Convex Factorization	298
4.9.2	Cell-to-Cell Mapping	300
4.10	Conclusion	304

<b>5</b>	<b>Parametrization and Optimization of Fuzzy Controllers</b> . . . .	<b>307</b>
5.1	Design of TSK Controllers . . . . .	310
5.2	Adaptation of Characteristic Surfaces . . . . .	311
5.2.1	Adaptive Compensation Control . . . . .	311
5.2.2	Adaptive Sliding Mode Control . . . . .	319
5.3	Adaptation of Fuzzy Rules . . . . .	321
5.4	Model-Based Control . . . . .	323
5.4.1	Structure of the Model . . . . .	323
5.4.2	Single Step Control . . . . .	327
5.4.3	Optimal Control . . . . .	333
5.5	Fuzzy Controllers and Fuzzy Clustering . . . . .	338
5.5.1	Fuzzy Cluster Analysis . . . . .	338
5.5.2	Generating Mamdani Controllers . . . . .	343
5.5.3	Generating TSK Models . . . . .	343
5.6	Neuro Fuzzy Control . . . . .	344
5.6.1	Neural Networks . . . . .	344
5.6.2	Combination of Neural Nets and Fuzzy Controllers . . . .	349
5.6.3	Models with Supervised Learning Methods . . . . .	352
5.6.4	Models with Reinforcement Learning . . . . .	356
5.6.5	Recurrent Approaches . . . . .	361
5.6.6	Discussion . . . . .	365
5.7	Fuzzy Controllers and Evolutionary Algorithms . . . . .	365
5.7.1	Evolution Strategies . . . . .	366
5.7.2	Genetic Algorithms . . . . .	367
5.7.3	Evolutionary Algorithms for Optimising Fuzzy Controllers . . . . .	369
5.7.4	A Genetic Algorithm for Learning a TSK Controller . . .	372
5.7.5	Discussion . . . . .	374
	<b>Correspondence Table for Laplace Transformations</b> . . . . .	<b>375</b>
	<b>Non-Minimum Phase Systems</b> . . . . .	<b>377</b>
	<b>Norms</b> . . . . .	<b>381</b>
	<b>Lyapunov Equation</b> . . . . .	<b>387</b>
	<b>Lie Derivative</b> . . . . .	<b>389</b>
	<b>Positive Real Systems</b> . . . . .	<b>391</b>
	<b>Linear Matrix Inequalities</b> . . . . .	<b>393</b>
