Contribution to the Improvement of the Software Development Process for Product Families

Habilitation Thesis
Submitted by
PhD Silva Robak, The University of Zielona Góra
January 2005
Contents

1 Introduction.........................................................................................................................1

1.1 Software Development Methodology for One System at a Time........................3
  1.1.1 Object-Oriented Process Model - The Unified Software Development Process (UP)..................8
  1.1.2 Development of Software Components.................................................................11
  1.1.3 Development of Software Architectures..............................................................14

1.2 Software Reuse in Object-Oriented Software Development Methods..............15

1.3 Developing Software with Software Product Families and Software Product Lines.................................................................16
  1.3.1 Basic Notions and Variability...............................................................................17
  1.3.2 Basic Activities: Domain Engineering and Application Engineering..............20
    1.3.2.1 Design of Generic Architecture.................................................................27
    1.3.2.2 Development of Software Components.....................................................30

1.4 Comparison between Object-Oriented Software Development of One System at a Time and the Product Family Approach.................................32

2 Overview of Leading Methodologies (Process Models) for their Applicability for Product Families.................................................................37

  2.1 Feature Driven Methods............................................................................................38
    2.1.1 Feature-Oriented Domain Analysis (FODA)....................................................38
    2.1.2 Feature-Oriented Reuse Method (FORM).........................................................42
    2.1.3 Featured RSEB (FeatuRSEB)..........................................................................43
    2.1.4 Other Methods (MBSE, FODAcom).................................................................45
    2.1.5 Generative Programming..................................................................................46

  2.2 Further Methods......................................................................................................47
    2.2.1 PuLSE and Component-Based Product Line Development (KobrA).........47
    2.2.2 Software Product Line Integrated Technology (SPLIT).................................50
    2.2.3 Family-Oriented Abstraction, Specification and Translation Approach (FAST).................................45
    2.2.4 Object-Oriented Processes (Fusion, Catalysis)..............................................54

  2.3 Industrial Experiences..............................................................................................56

  2.4 SEI Software Product Lines Approach...................................................................59
    2.4.1 SEI Framework for Software Product Line Practice....................................60
## CONTENTS

<table>
<thead>
<tr>
<th>Section</th>
<th>Pages</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.4.2 SEI Product Line Patterns</td>
<td>64</td>
</tr>
<tr>
<td>2.5 Deficiencies in Object-Oriented Development of Product Families</td>
<td>68</td>
</tr>
<tr>
<td>3 Handling Variability in Software Product Families</td>
<td>75</td>
</tr>
<tr>
<td>3.1 Modeling Variability</td>
<td>76</td>
</tr>
<tr>
<td>3.1.1 Variability Abstraction Levels</td>
<td>76</td>
</tr>
<tr>
<td>3.1.2 Variability Patterns and Types of Variability</td>
<td>78</td>
</tr>
<tr>
<td>3.1.3 Variability Management and Traceability</td>
<td>81</td>
</tr>
<tr>
<td>3.2 Variability Modeling with Feature Diagrams</td>
<td>84</td>
</tr>
<tr>
<td>3.2.1 Feature Layers and Variable Features</td>
<td>84</td>
</tr>
<tr>
<td>3.2.2 FODA Feature Diagram</td>
<td>86</td>
</tr>
<tr>
<td>3.2.2.1 Grammar for FODA Feature Diagram</td>
<td>88</td>
</tr>
<tr>
<td>3.2.2.2 FODA Feature Diagram - an Example</td>
<td>90</td>
</tr>
<tr>
<td>3.2.3 Feature Diagram Notation in Generative Programming</td>
<td>92</td>
</tr>
<tr>
<td>3.2.3.1 Variable Features and Classification of Variation Points in Generative Programming</td>
<td>95</td>
</tr>
<tr>
<td>3.2.3.2 Normalization and Clustering of Features</td>
<td>98</td>
</tr>
<tr>
<td>3.2.4 Information Associated with a Feature</td>
<td>98</td>
</tr>
<tr>
<td>3.2.4.1 Use of Feature Weights for Variable Features</td>
<td>100</td>
</tr>
<tr>
<td>3.2.5 Further Feature Types and Relationships</td>
<td>100</td>
</tr>
<tr>
<td>3.2.6 Comparison of Feature Diagram Elements in some Leading Notations</td>
<td>103</td>
</tr>
<tr>
<td>3.3 Implementing Variability in Application Engineering</td>
<td>107</td>
</tr>
<tr>
<td>3.4 Conclusion</td>
<td>108</td>
</tr>
<tr>
<td>4 Some Improvements of The Software Development Process for Product Families</td>
<td>111</td>
</tr>
<tr>
<td>4.1 Development Process Components: Top Level View</td>

CONTENTS

4.2.1.3 Improvement ........................................... 139
4.2.2 Management of Feature-Based Requirements with Versions
Approach .......................................................... 140
  4.2.2.1 Conditions-Based Version Model .................... 140
  4.2.2.2 Formalizing Features with Conditions ................ 142

4.3 Adapting UML for Modeling Variability in Product Families .... 144
  4.3.1 Representing Variability in UML ......................... 145
    4.3.1.1 Comparison of Different Methods for Modeling Variability
in UML .................................................................. 145
    4.3.1.2 Representing Features with UML Class Diagrams .... 152
    4.3.1.3 Integrating Feature Models into UML Activity Diagrams
and Components ..................................................... 159
    4.3.1.4 Improvement ............................................. 161
  4.3.2 Using Versions in UML Models ................................ 162
  4.3.3 Customization of UML for Domain-Specific Modeling of Real-Time
and Embedded Systems .............................................. 163
    4.3.3.1 Usage of Stereotypes .................................... 164
    4.3.3.2 Scenarios - Extended Sequence Diagram and Extended
Timing Diagram ....................................................... 166

4.4 Applying Generative Technologies for Developing System Parts in
Software Product Families ........................................ 170
  4.4.1 Applying XML-Frame Technology for Handling Construction-
Time Variability ..................................................... 170
    4.4.1.1 Frame Technology ........................................ 170
    4.4.1.2 XML-Based Frame Specification Language FSL .... 172
    4.4.1.3 FSL Frame Example ....................................... 173
  4.4.2 Contribution ................................................ 175

5 Using the Approach in Developing Web Applications .............. 177
  5.1 Modeling Web Services with Feature Models ..................... 177
    5.1.1 Describing Web Services with Feature Models ........... 178
    5.1.2. Variability of Web Services ............................ 181
  5.2 Using the Approach in E-Commerce Domain ...................... 183
    5.2.1 Business Process Management Framework for E-Commerce
Applications ......................................................... 184
      5.2.1.1 ARIS Models in Intershop ............................ 184
    5.2.2 A Sample Order Process for an E-Commerce System .... 187
CONTENTS

5.2.2.1 Order Process Description by Means of Feature Model in UML Notation .................................................. 187
5.2.2.2 Extended Order Process Containing some Variant Features Modeled with Fuzzy Weights ........................................... 193
5.2.3 Application of Versions in UML Software Models in E-Commerce Systems .................................................................. 198
5.2.3.1 System Versions .................................................................................................................................................. 200

6 Summary and Conclusion ................................................................................................................................. 200

Bibliography ............................................................................................................................................................ 209

Abbreviations ......................................................................................................................................................... 221

Glossary .................................................................................................................................................................. 225
