COMPUTING BRAIN ACTIVITY MAPS FROM fMRI TIME-SERIES IMAGES

GORDON E. SARTY

University of Saskatchewan
## Contents

*Preface*  

1 **Introduction**  
   1.1 Overview of fMRI technique  
   1.2 Overview of fMRI time-series data processing  
   1.3 Mathematical conventions  
   1.4 Note on software availability  

2 **Image preprocessing**  
   2.1 EPI ghost artifact reduction  
   2.2 Geometric distortion correction  
   2.3 Image alignment and head motion  
   2.4 Physiological artifact and noise removal  
   2.5 Anatomical transformations to standard brain spaces  
   2.6 Attitudes towards preprocessing  

3 **Experimental designs**  
   3.1 Blocked designs  
   3.2 Event-related designs  
   3.3 The influence of MRI physics on fMRI experiment design  

4 **Univariate approaches: activation maps**  
   4.1 The GLM – univariate approaches  
   4.2 Modeling the physiology of the hemodynamic response  
   4.3 Other parametric methods  
   4.4 Bayesian methods  
   4.5 Nonparametric methods  
   4.6 Fourier methods  
   4.7 Repeatability and comparisons of methods  
   4.8 Real time fMRI and complementary methods

Contents

5 Multivariate approaches: connectivity maps 114
   5.1 The GLM – multivariate approaches 114
   5.2 Principal and independent component methods 119
   5.3 Wavelet methods 129
   5.4 Clustering methods 133
   5.5 Functional connectivity 147
   5.6 Effective connectivity 149

6 Conclusion 159
