Newnes Guide to
Television and Video Technology

K. F. Ibrahim
Contents

Preface xxii

1. Television fundamentals 1
   Scanning 1
   Interlacing 3
   Synchronisation pulses 4
   Composite video waveform 4
   Common image format 6
   Active lines 6
   Aspect ratio 7
   Pixels and bandwidth 7
   Video bandwidth 7
   Television broadcasting 8
   Modulation 9
   Frequency spectrum, PAL channel 9
   Channel allocation 11
   Frequency spectrum, NTSC channel 12

2. Colour television 13
   Light and colour 13
   The sensation of colour 13
   Primary colours 14
   The colour triangle 15
   Saturation and hue 15
   Chromaticity diagram 16
   Colour temperature 17
   Principles of colour transmission 18
   Frequency interleaving 18
   Quadrature amplitude modulation 21
   NTSC colour components 23
   NTSC refresh rate 23
   Composite colour signal 24
   Colour burst 24
Contents

The standard colour bar display 25
Gamma-correction 26
Weighting factors 27
PAL colour system 27

3. Digital television 31
   Principles of digital video broadcasting 31
   Digitising the TV picture 32
   SDTV sampling rate 33
   Video sampling 34
   4:2:2 sampling structure 35
   4:1:1 sampling structure 35
   4:2:0 sampling structure 36
   The bit rate 37

4. MPEG encoding 39
   Video MPEG-2 coding 40
   Video data preparation 40
   Temporal compression 41
   Group of pictures 43
   Block matching 43
   Predicted and difference frames 44
   Bidirectional prediction 45
   Spatial compression 46
   The discrete cosine transform 46
   Quantising the DCT block 50
   Zigzag scanning of the DCT matrix 51
   Coding of DCT coefficients 53
   Buffering 54
   The complete DCT coder 55
   Forward prediction coder-decoder, codec 55
   GOP construction 57

5. High definition television 59
   Why HDTV? 59
   HDTV common interface format 59
   The road to MPEG-4/H.264/AVC 60
   MPEG-4 profiles 61
   H.264/AVC features 61

105
106
106

Intra-frame (spatial) prediction
Intra-blocks and modes
Size and mode selection
Intra-prediction operation
AVC motion compensation
Motion compensation block sizes
Motion vector prediction
New transforms and quantisation
Adaptive de-blocking filter
New entropy coding technology
Summarised features of AVC

6. Audio encoding

Principles of MPEG-1 audio
MPEG audio basic elements
The full Layer II audio coder
Layer III coding
Pre-echo
Full Layer III audio coder
Advanced audio coding
MPEG-2 AAC
MPEG-4 audio
MPEG-4 AAC
Low-delay AAC
Surround sound
Multi-channel formats
Perception of sounds in space

7. MPEG-2 transport stream

Transport stream multiplexing
MPEG-2 PES packet
Time stamps
Program clock reference
Transport stream packet
Null transport packets
Transport packet header
Programme-specific information
Transport stream multiplexing
Re-multiplexing
8. Channel encoding
   - Scrambling 109
   - Forward error correction 109
   - Error correction 111
   - FEC processing 113
   - Modulation 114
   - Phase shift keying 114
   - Quadrature amplitude modulation 116
   - Orthogonal frequency division multiplexing 117
   - Single-frequency network 121
   - Coded OFDM 123
   - 8K/2K COFDM modes 123
   - High definition terrestrial television 125
   - Satellite channel encoder 125
   - Terrestrial channel encoder 126

9. Video re-production
   - Overview 129
   - Display units 131
   - The cathode ray tube 131
   - Extra high tension 132
   - Monochrome tube 133
   - Screen size 135
   - Raster geometry 135
   - Scan velocity modulation 136
   - Beam modulation 136
   - Colour receiver tubes 137
   - Purity 137
   - Convergence 138
   - The shadowmask tube 139
   - The in-line colour tube 140
   - The trinitron tube 140
   - The PIL tube 141

10. Plasma panels
    - Introduction to flat panel displays 143
    - Resolution: flat panel versus CRT 146
    - Plasma operation 147
    - Address display separated 150
    - Driving the panel 153
11. Liquid crystal display (LCD) 179
   Polarisation 179
   Principles of operation of LC cell 179
   Reflective and transmissive 181
   The TN transmissive LCD 182
   Normally white and normally black 183
   Passive- and active-matrix LCDs 183
   TFT cell drive 185
   Response time 187
   Polarity inversion 189
   Greyscale and colour generation 192
   Panel drive 193
   The backlight assembly 195
   CCFT parameters 197
   Tube brightness control 197
   The d.c.–a.c. inverter 199
### Contents

- Lamp error detection 201
- Adaptive transmissive scaling 202
- LCD panel faults 202
- Drive faults 205

#### 12. DLP and SED 207
- Principles of DLP display 207
- Greyscale generation 208
- Bit splitting 209
- DMD structure 210
- DMD operation 211
- DMD addressing cycle 213
- Multiplexed addressing 214
- Generating colour 216
- The rainbow effect 217
- The three-chip DLP 218
- Principles of SED panel 219

#### 13. Television receivers CRT-type 221
- The analogue TV receiver 221
- The front end 223
- RF oscillator 225
- Mixer-oscillator 226
- Complete tuner 226
- The phase-locked loop 226
- Synthesised tuning 228
- The IF stage 229
- The IF response curve 230
- The vision detector 231
- Synchronous demodulator 232
- Tuner IC package 233
- The sync separator 234
- Flywheel sync separator 235
- Sandcastle pulse 238
- Field timebase 238
- Field output stage 239
- Line timebase and drive 241
14. Television receivers: colour processing
   Colour burst processing
   Colour decoding
   The comb filter
   Comb filter delays
   U and V separation
   Colour difference demodulation
   Matrix network
   Beam limiting
   Signal-processing IC package
   RGB output stage

15. DC power generation
   CRT television power requirements
   Linear regulators
   Thyristor-controlled rectifier
   Switched-mode power supplies
   High-frequency chokes
   Start-up and soft start
   Standby supply
   Self-oscillating power supply
   Resonant converters

16. Flat panel television receivers
   Video formatting
   Scan-rate conversion
   Image scaling
   De-gamma correction and error and diffusion
   Digital video interface
   Low-voltage differential signalling
   PanelLink
   Transition minimised differential signalling
   DVI connector pin-out
   High-definition multimedia interface

Multi-standard MSP 334
Audio amplification 335

18. The digital TV reception 339
   The digital receiver/decoder of set-top-box 339
   System overview 339
   DVB satellite channel decoder 341
   DVB terrestrial channel decoder 344
   OFDM demodulation 345
   Transport demultiplexing and MPEG decoding 347
   The I\textsuperscript{2}S serial sound bus 350
   SPDIF digital interface 351
   UHF modulator 352
   The integrated digital television 353
   Flat panel iDTV 354
   The HD decoder box 354
   The HD ready television receiver 355
   Testing the digital TV decoder box 358
   Aerials and dishes 358
   The boot-up sequence 360
   Testing channel decoder 361
   Testing the transport/MPEG decoder 362
   Memory faults and their symptoms 364

19. Projection systems 367
   CRT-based projection systems 367
   Microdisplay-based systems 370
   The illumination assembly 370
   DMD-based projectors 370
   HTPS-based systems 372
   Colour filter HTPS 372
   Colour filterless 3-panel HTPS projector 373
   Pros and cons of HTPS projectors 375
   Liquid crystal on silicon systems 376
   The three-PBS LCoS system 378
   ColorSelect\textsuperscript{TM} LCoS-based systems 378
   Merits and demerits of LCoS projection systems 379
   Other projector technologies 380
   The 3-panel HTPS projector block diagram 381
### Contents

Three-dimensional video display 381  
3D LCD panels 385  
Power supply requirements 385

### 20. DVD 387  
DVD construction 387  
DVD capacity 389  
Storage capacity 391  
Recording sectors 392  
Rotation speed 392  
Data transfer 393  
Triple-layer DVD 394  
DVD encoding process 394  
Video encoding 397  
Audio encoding 397  
Dolby digital (AC-3) encoding 398  
Linear PCM 398  
PES packet construction 399  
Forward error correction—DVD/HD DVD 400  
Non-return-to-zero encoding 400  
Eight-to-sixteen modulation (EFM+) 401  
DVD playback system 401  
The optical pickup head 402  
Focus depth and numerical aperture 404  
The photodiode detector assembly 405  
Focus error 405  
Tracking error 407  
The tracking and focus two-axis device 407  
Compatible pickup 407  
Signal processing and control 408  
The RF processor 410  
Servo control 412  
The error signals 412  
Playback start-up routine 413  
CD/DVD detection 413  
Focus search 413  
Single/dual-layer detection 413  
Tracking control 414  
Typical servo control chip 415
RF modulator 463
Clock back-up 464
Video tape formats 464

22. Digital recording and camcorder 467
Signal processing: record 468
DV audio processing 469
Signal processing: replay 470
DV track configuration 470
DV tracking system 471
System parameters 471
DV tape and cassette 471
Digital-8 format 474
D-8 recording system 474
Other DV formats: DVCAM 477
DVCPRO (professional) 477
Hard disk recording 479
Digital video recorder 481
Recording files 481
Audio and video capture 482
Editing 482
Rendering 483
DV Editing 483
Recordable DVD 483
Layout of recordable DVD 485
Burst cutting area 487
Write strategies 487
DVD recorder 488
HDD recorder 489
Camcorders 490
Optical section 492
CCD image sensor 493
Image stabilisation 493
Digital picture zoom 494
Electronic viewfinder 494
Audio section 495
D-8 signal processing 495
D-8 playback 497
23. Cable and on-line television 499
   Cable types 500
   Transmission modes 500
   The network 501
   Propagation modes in glass-fibre cables 502
   Multimedia 'cable TV' 504

24. Multimedia convergence 507
   Digital multimedia broadcasting 507
   DVB-H 508
   Handheld screen resolution 509
   DVB-H system properties 509
   Time-slicing 509
   IP interfacing 510
   Enhanced FEC 511
   Enhanced signalling 513
   The 4K transmission mode 514
   In-depth interleaving 514
   Compatibility 515
   Introduction to DAB 515
   Transmission modes 517
   DAB frames 518
   DAB-2 518
   DAB TV 518
   On-line convergence 520
   ADSL 520
   IPTV 521
   Bit rates 522
   Closed IPTV network 523
   Video-on-demand 525

25. Interconnectivity and ports 527
   RF connections 527
   Baseband distribution 528
   SCART connections 529
   Video coupling 533
   Audio coupling 534
   Speaker wiring 534
xx Contents

Digital ports 534
Video graphic array 535
Universal serial bus 535
RS-232 connector 536
Firewire 537

Appendix A1: Teletext 539
Appendix A2: PC serial control bus 547
Appendix A3: Error control techniques 549
Appendix A4: Processing devices 553
Appendix A5: The OSI seven-layer reference model 559
Appendix A6: HDMI–DVI compatibility 561
Appendix A7: The decibel (dB) 563
Appendix A8: Amplitude and frequency modulation 565
