B. Lüthi

Physical Acoustics in the Solid State

With 188 Figures

Springer
Contents

1 Introduction ................................................................. 1

2 Experimental Techniques .................................................. 5
  2.1 Transducer ............................................................... 6
  2.2 Sound Velocity and Attenuation, Experimental Techniques ... 7
    2.2.1 Simple Ultrasonic Set-Up ....................................... 7
    2.2.2 Relative Sound Velocity and Attenuation Changes .......... 9
    2.2.3 Ultrasonics at Very Low Temperatures ...................... 11
    2.2.4 Absolute Sound Velocity Measurements ..................... 12
    2.2.5 Resonant Ultrasound Spectroscopy, RUS .................... 14
    2.2.6 Vibrating Reed Technique ..................................... 16
  2.3 Phonon Echoes ......................................................... 16
  2.4 Ultrasonics in Pulsed Magnetic Fields .......................... 17
  2.5 Surface Acoustic Wave Generation and Detection .............. 20
  2.6 Microwave Ultrasonics .............................................. 21
  2.7 Brillouin Scattering ................................................ 23
  2.8 Thermal Expansion and Magneto-striction,
      Thermal Conductivity ............................................ 25
      2.8.1 Thermal Expansion and Magneto-striction ................ 25
      2.8.2 Thermal Conductivity ..................................... 25

3 Elasticity ........................................................................... 27
  3.1 Strains, Stresses and Elastic Constants ......................... 27
  3.2 Symmetry Aspect ......................................................... 32
  3.3 Third Order Elastic Constants ..................................... 36
  3.4 Elastic Stability, Elastic Isotropy ................................. 37
  3.5 Surface Acoustic Waves, SAW ....................................... 39
  3.6 Lattice Dynamics ....................................................... 44
      3.6.1 Phonon Dispersion ........................................... 44
      3.6.2 Debye Theory of Lattice Dynamics ....................... 45

4 Thermodynamics and Phase Transitions ................................. 47
  4.1 Thermodynamic Potentials .......................................... 47
  4.2 Background Elastic Constant and Attenuation .................. 49
      4.2.1 Background Elastic Constant, Thermal Expansion
        and Specific Heat ............................................. 49
4.2.2 Sound Dissipation Due to Phonons in Insulators

4.3 Landau Theory, Strain–Order Parameter Coupling

4.3.1 Landau Theory for Second Order Phase Transitions
4.3.2 Scaling Relations
4.3.3 Landau Theory for a First Order Phase Transition
4.3.4 Strain–Order Parameter Coupling
4.3.5 Fluctuation Effects
4.3.6 Landau–Khalatnikov Theory

4.4 Ginzburg Criterion and Marginal Dimensionality

4.5 Adiabatic and Isothermal Quantities

5 Acoustic Waves in the Presence of Magnetic Ions

5.1 Strain–Magnetic Ion Interaction
5.1.1 Magnetic Interactions
5.1.2 Single Ion–Strain Interaction
5.1.3 Exchange Striction

5.2 Thermodynamic Functions for 4f–Rare Earth Ions in the Presence of Crystal Fields
5.2.1 Specific Heat and Thermal Expansion
5.2.2 Magnetic Susceptibility and Elastic Constants
5.2.3 Other Experimental Methods to Determine Magneto-elastic Coupling Constants
5.2.4 Magneto-elastic Coupling Constants

5.3 Susceptibilities with Interactions
5.4 External and Internal Strains
5.5 Paramagnetic Spin–Phonon Interaction for 3d-Transition Metal Ions in Crystals
5.6 Nuclear Acoustic Resonance

6 Ultrasonics at Magnetic Phase Transitions

6.1 Magnetic Phase Transition
6.1.1 Spin–Phonon Coupling Mechanism
6.1.2 Critical Attenuation Coefficient
6.1.3 Sound Velocity Effects near Magnetic Phase Transitions

6.2 Spin Reorientation Phase Transition
6.3 Sound Propagation in the Spin-Density Wave Anti-ferromagnet Chromium

7 Ultrasonics at Structural Transitions

7.1 Charge Order

7.2 Cooperative Jahn–Teller Effect and Quadrupolar (Orbital) Transition
7.2.1 Case of Transition Metal Compounds
7.2.2 Case of Rare Earth Compounds
Higher Order Multi-pole–strain Coupling
