### Part I: Enhancement  
Rangaraj M. Rangayyan

#### Chapter 1  
Fundamental Enhancement Techniques  
Raman B. Paranjape

1.1 Introduction  
1.2 Preliminaries and Definitions  
1.3 Pixel Operations  
1.4 Local Operators  
1.5 Operations with Multiple Images  
1.6 Frequency Domain Techniques  
1.7 Concluding Remarks  
1.8 References

#### Chapter 2  
Adaptive Image Filtering  
Carl-Fredrik Westin, Hans Knutsson, and Ron Kikinis

2.1 Introduction  
2.2 Multidimensional Spatial Frequencies and Filtering  
2.3 Random Fields and Wiener Filtering  
2.4 Adaptive Wiener Filters  
2.5 Anisotropic Adaptive Filtering  
2.6 References

#### Chapter 3  
Enhancement by Multiscale Nonlinear Operators  
Andrew Laine, and Walter Huda

3.1 Introduction  
3.2 One-Dimensional Discrete Dyadic Wavelet Transform  
3.3 Linear Enhancement and Unsharp Masking  
3.4 Nonlinear Enhancement by Functional Mapping  
3.5 A Method for Combined Denoising and Enhancement  
3.6 Two-Dimensional Extension  
3.7 Experimental Results and Comparison  
3.8 Conclusion  
3.9 References

#### Chapter 4  
Medical Image Enhancement Using Fourier Descriptors and Hybrid Filters  
Minshan Lei, Dansheng Song, Yudong Yao, Ravi Sankar, Ehsan Sheybani, and Wei Qian

4.1 Introduction  
4.2 Design of the Hybrid Filter  
4.3 Experimental Results  
4.4 Discussion and Conclusion  
4.5 References

### Part II: Segmentation  
Isaac N. Bankman

#### Chapter 5  
Overview and Fundamentals of Medical Image Segmentation  
Jadwiga Rogowska

5.1 Introduction  
5.2 Thresholding
Chapter 6  Image Segmentation by Fuzzy Clustering: Methods and Issues  Melanie A. Sutton  
6.1 Introduction  
6.2 The Quantitative Basis of Fuzzy Image Segmentation  
6.3 Qualitative Discussion of a Few Fuzzy Image Segmentation Methods  
6.4 Conclusions and Discussion  
6.5 References  

Chapter 7  Segmentation with Neural Networks  Axel Wismueller  
7.1 Introduction  
7.2 Structure and Function of the GRBF Network  
7.3 Training Procedure  
7.4 Application to Medical Image Segmentation  
7.5 Image Data  
7.6 Preprocessing  
7.7 Vector Quantization  
7.8 Classification  
7.9 Results  
7.10 Discussion  
7.11 Topical Applications, Conceptual Extensions, and Outlook  
7.12 Conclusion and Outlook  
7.13 References  

Chapter 8  Deformable Models  Tim McInerney, and Demetri Terzopoulos  
8.1 Introduction  
8.2 Mathematical Foundations of Deformable Models  
8.3 Medical Image Analysis with Deformable Models  
8.4 Discussion  
8.5 Conclusion  
8.6 References  

Chapter 9  Shape Information in Deformable Models  Lawrence H. Staib, Y. Michelle Wang, Xiaolan Zeng, and James S. Duncan  
9.1 Background  
9.2 Global Shape Constraints  
9.3 Level Set Methods Incorporating Generic Constraints  
9.4 Conclusions  
9.5 References  

Chapter 10  Gradient Vector Flow Deformable Models  Chenyang Xu, Xiao Han, and Jerry L. Prince  
10.1 Introduction  
10.2 Background  
10.3 GVF Deformable Contours  
10.4 Experiments  
10.5 3D GVF Deformable Models and Results  
10.6 Discussion  
10.7 Conclusions  
10.8 References  

5.3 Region Growing  
5.4 Watershed Algorithm  
5.5 Edge-Based Segmentation Techniques  
5.6 Multispectral Techniques  
5.7 Other Techniques  
5.8 Concluding Remarks  
5.9 References  

Chapter 5  Image Segmentation  
5.3 Region Growing  
5.4 Watershed Algorithm  
5.5 Edge-Based Segmentation Techniques  
5.6 Multispectral Techniques  
5.7 Other Techniques  
5.8 Concluding Remarks  
5.9 References  

Chapter 10  Gradient Vector Flow Deformable Models  Chenyang Xu, Xiao Han, and Jerry L. Prince  
10.1 Introduction  
10.2 Background  
10.3 GVF Deformable Contours  
10.4 Experiments  
10.5 3D GVF Deformable Models and Results  
10.6 Discussion  
10.7 Conclusions  
10.8 References  

Chapter 5  Image Segmentation  
5.3 Region Growing  
5.4 Watershed Algorithm  
5.5 Edge-Based Segmentation Techniques  
5.6 Multispectral Techniques  
5.7 Other Techniques  
5.8 Concluding Remarks  
5.9 References  

Chapter 4  Image Segmentation  
4.3 Region Growing  
4.4 Watershed Algorithm  
4.5 Edge-Based Segmentation Techniques  
4.6 Multispectral Techniques  
4.7 Other Techniques  
4.8 Concluding Remarks  
4.9 References  

Chapter 3  Image Segmentation  
3.3 Region Growing  
3.4 Watershed Algorithm  
3.5 Edge-Based Segmentation Techniques  
3.6 Multispectral Techniques  
3.7 Other Techniques  
3.8 Concluding Remarks  
3.9 References  

Chapter 2  Image Segmentation  
2.3 Region Growing  
2.4 Watershed Algorithm  
2.5 Edge-Based Segmentation Techniques  
2.6 Multispectral Techniques  
2.7 Other Techniques  
2.8 Concluding Remarks  
2.9 References  

Chapter 1  Image Segmentation  
1.3 Region Growing  
1.4 Watershed Algorithm  
1.5 Edge-Based Segmentation Techniques  
1.6 Multispectral Techniques  
1.7 Other Techniques  
1.8 Concluding Remarks  
1.9 References

## Contents

16.6 Applications to Real Data .......................................................... 285  
16.7 Conclusions ................................................................................. 290  
16.8 References .............................................

### Chapter 17 Computational Neuroanatomy Using Shape Transformations  
Christos Davatzikos ................................................................. 293  

17.1 Quantifying Anatomy via Shape Transformations  
17.2 The Shape Transformation ......................................................... 294  
17.3 Measurements Based on the Shape Transformation  
17.4 Spatial Normalization of Image Data ........................................ 297  
17.5 Conclusion .................................................................................. 299  
17.6 References ................................................................................. 302  

### Chapter 18 Tumor Growth Modeling in Oncological Image Analysis  
Ender Konukoglu, Xavier Pennec, Olivier Clatz, and Nicholas Ayache  
........................................................................................................ 305  

18.1 Introduction .................................................................................. 305  
18.2 Mathematical Models ............................................................... 306  
18.3 Image-Guided Tools for Therapy Planning  
18.4 Applications to Registration and Segmentation  
18.5 Perspectives and Challenges ....................................................... 311  
18.6 References ................................................................................. 313  

### Chapter 19 Arterial Tree Morphometry  
Roger Johnson .................................................................................. 317  

19.1 Introduction .................................................................................. 317  
19.2 Data Acquisition for Vascular Morphometry  
19.3 Image Processing for Arterial Tree Morphometry  
19.4 Arterial Tree Morphometry in Pulmonary Hypertension Research  
19.5 Discussion and Conclusions ....................................................... 325  
19.6 References ................................................................................. 333  

### Chapter 20 Image-Based Computational Biomechanics of the Musculoskeletal System  
Edmund Y. S. Chao, Nozomu Inoue, Frank J. Frassica, and John J. Elias  
........................................................................................................ 341  

20.1 Introduction .................................................................................. 341  
20.2 Three-Dimensional Biomechanical Models of the Musculoskeletal System  
20.3 Bone Structure and Material Property Analysis  
20.4 Applications ................................................................................ 347  
20.5 Summary ....................................................................................... 351  
20.6 References ..................................................................................... 353  

### Chapter 21 Three-Dimensional Bone Angle Quantification  
Jens A. Richolt, Nobuhiko Hata, Ron Kikinis, Jens Kordelle, and Michael B. Millis  
........................................................................................................ 355  

21.1 Introduction .................................................................................. 355  
21.2 3D Angle Measurement Method .................................................. 358  
21.3 Results ......................................................................................... 361  
21.4 Discussion ..................................................................................... 363  
21.5 References ..................................................................................... 364  

### Chapter 22 Database Selection and Feature Extraction for Neural Networks  
Bin Zheng ......................................................................................... 367  

22.1 Introduction .................................................................................. 367  
22.2 Database Selection ....................................................................... 370  
22.3 Feature Selection .......................................................................... 373  
22.4 Summary ....................................................................................... 377  
22.5 References ..................................................................................... 378
Chapter 23  Quantitative Image Analysis for Estimation of Breast Cancer Risk

Martin J. Yaffe, and Norman F. Boyd

23.1 Introduction ..................................................... 381
23.2 Methods for Characterizing Mammographic Density ................. 385
23.3 Planimetry ....................................................... 386
23.4 Semiautomated Feature: Interactive Thresholding ................. 386
23.5 Automated Analysis of Mammographic Densities ................. 388
23.6 Symmetry of Projection in the Quantitative Analysis of Mammographic Images ................................. 391
23.7 Variation of Thickness across the Breast: Effect on Density Analysis .................................................. 391
23.8 Volumetric Analysis of Mammographic Density ................. 393
23.9 Other Imaging Modalities .................................... 395
23.10 Applications of Mammographic Density Measurements .......... 395
23.11 References ..................................................... 396

Chapter 24  Classification of Breast Lesions from Mammograms

Yulei Jiang

24.1 Techniques for Classifying Breast Lesions ......................... 400
24.2 Performance of Computer Classification .......................... 407
24.3 Effect of Computer Classification on Radiologists' Diagnostic Performance .................................................. 408
24.4 Methods for Presenting Computer Analysis to Radiologists .... 410
24.5 Summary ......................................................... 414
24.6 References ..................................................... 414

Chapter 25  Quantitative Analysis of Cardiac Function

Osman Ratib

25.1 Dynamic Image Acquisition Techniques ........................ 419
25.2 Dynamic Analysis of Left Ventricular Function .................. 420
25.3 Quantitative Evaluation of Flow Motion ........................ 428
25.4 Conclusion ....................................................... 431
25.5 References ..................................................... 431

Chapter 26  Image Processing and Analysis in Tagged Cardiac MRI

William S. Kerwin, Nael F. Osman, and Jerry L. Prince

26.1 Introduction ..................................................... 435
26.2 Background ...................................................... 436
26.3 Feature Tracking Techniques in MR Tagging ....................... 439
26.4 Direct Encoding Methods ...................................... 444
26.5 3-D Motion Estimation ........................................ 446
26.6 Discussion ....................................................... 449
26.7 References ..................................................... 450

Chapter 27  Cytometric Features of Fluorescently Labeled Nuclei for Cell Classification

Susanne Heynen-Genel, and Jeffrey H. Price

27.1 Introduction ..................................................... 453
27.2 Nuclear Features ................................................ 455
27.3 Classification Process .......................................... 458
27.4 Example of Feature Analysis for Classification ................... 460
27.5 Conclusion ....................................................... 461
27.6 References ..................................................... 462

Chapter 28  Image Interpolation and Resampling

Philippe Thévenaz, Thierry Blu, and Michael Unser

28.1 Introduction ..................................................... 465
28.2 Classical Interpolation ......................................... 467
28.3 Generalized Interpolation ....................................... 468
28.4 Terminology and Other Pitfalls ................................ 469
28.5 Artifacts ......................................................... 469

*Pamela Cosman, Robert Gray, and Richard Olshen* ........................................... 917

54.1 Introduction ........................................................... 917  
54.2 Image Compression .................................................. 918  
54.3 The Three Data Sets ................................................ 919  
54.4 Average Distortion and SNR ....................................... 921  
54.5 Subjective Ratings .................................................. 924  
54.6 Diagnostic Accuracy and ROC Methodology ..................... 927  
54.7 Determination of a Gold Standard ................................. 930  
54.8 Concluding Remarks ............................................... 931  
54.9 References ............................................................. 931

### Chapter 55 Quality Evaluation for Compressed Medical Images: Statistical Issues  
*Pamela Cosman, Robert Gray, and Richard Olshen* ........................................... 934

55.1 Introduction ........................................................... 934  
55.2 Statistical Size and Power ......................................... 934  
55.3 Analysis of Learning Effects ....................................... 936  
55.4 Comparison of Judges ............................................. 937  
55.5 Relationships Between Quality Measures ......................... 938  
55.6 Philosophical Issues ................................................. 942  
55.7 References ............................................................. 943

### Chapter 56 Quality Evaluation for Compressed Medical Images: Diagnostic Accuracy  
*Pamela Cosman, Robert Gray, and Richard Olshen* ........................................... 944

56.1 Introduction ........................................................... 944  
56.2 CT Study: Example of Detection Accuracy ....................... 944  
56.3 MR Study: Example of Measurement Accuracy ................... 949  
56.4 Mammography Study: Example of Management Accuracy ........ 955  
56.5 Concluding Remarks ............................................... 960  
56.6 References ............................................................. 961

### Chapter 57 Three-Dimensional Image Compression with Wavelet Transforms  
*Jun Wang, and H.K. Huang* .............................................. 963

57.1 Background ........................................................... 963  
57.2 Wavelet Theory ...................................................... 963  
57.3 Three-Dimensional Image Compression with Wavelet Transform .... 965  
57.4 Wavelet Filter Selection for a 3D Image Data Set ............... 967  
57.5 References ............................................................. 972

### Index ................................................................. 973
