Bounce Tumble, and Splash!

Simulating the Physical World with Blender 3D

Tony Mullen
Contents

Foreword xiii
Introduction xv

Chapter 1 Re-creating the World: An Overview 1
Re-creating the Physical World with Blender 2
Blender's Physical Simulation Functionality 2
The Science of Simulation 5
Nonsimulation Tools and Techniques 6
Using Materials and Textures 6
Hot Lava with Material Nodes 7
Transparency and Subsurface Scattering 14
Sky Maps 20
Faking Physics with General Tools 23
Modeling Bodies of Water by Using Modifiers and Textures 24
Faking a Cloth Flag by Using a Displacement Modifier 41
Creating a Poseable Spring by Using an Array Modifier, Shape Keys, and PyDrivers 46

Chapter 2 The Nitty-Gritty on Particles 59
Introducing Particles 60
Setting Particle Parameters 60
Using the Physics Tab 65
Setting Visualization Options 67
Using the Extras Tab 72
Using Force Fields and Deflection 73
Working with Dynamic Particles 79
Creating Fire and Smoke 80
The BB vs. the Crystal Ball: Using the Explode Modifier 94
Boids! 101
Setting Up the Boids System 102
Working with Goals and Predators 102
Creating a Simple Flying Bird 106

Chapter 3 Getting Flexible with Soft Bodies and Cloth 109
Getting the Hard Facts on Soft Bodies 110
Understanding Soft Body Basics 110
Baking 112
Animating a Spring with Soft Bodies 112
Using Force Fields and Collision 118
Working with Soft Bodies and Curves 121
Using Stress-Mapped Textures for Rubbery Surfaces 132
Getting Jiggly with Lattices 139
Simulating Cloth and Clothing 146
Putting Some Clothes on Mancandy 147
Chapter 4

Hair Essentials: The Long and Short of Strand Particles

Introducing Blender Hair ........................................... 166
Setting Up a Hair Simulation ....................................... 168
Creating Clumping, Roughness, and Kink ......................... 176
Texture Mapping .......................................................... 180
Lighting and Rendering ............................................... 182
A Trip to the Beauty Salon ............................................ 183
Preparing the Mesh .................................................... 183
Editing Hair Particles ............................................... 183
Releasing Your Inner Hairdresser .................................... 192
More Tips and Tricks for Controlling Hair ......................... 199
Soft Bodies and Hair .................................................. 204
Other Uses for “Hair” Particles ......................................... 206

Chapter 5

Making a Splash with Fluids

Using the Blender Fluid Simulator ................................... 214
Getting Started with Fluids ........................................... 214
Inflow and Outflow .................................................... 224
Time, Size, and Resolution ........................................... 229
Particles ..................................................................... 232
Obstacles and Animation .............................................. 239
Animated Obstacles ..................................................... 242
Getting the Shot ........................................................ 247
Strawberries and Milk .................................................. 247
Bottle of Pop .................................................................. 254
Rushing Creek .................................................................. 259
Delving Further into Fluids .............................................. 266
Ipo Animation ............................................................. 266
Scripts and Exporting .................................................... 266
Exploring Further Resources .......................................... 268

Chapter 6

Bullet Physics and the Blender Game Engine

The Blender Game Engine .................................................. 272
Getting Started with BGE ................................................ 276
Using Ipos and Actions in BGE ........................................... 282
Rigid Body Simulation and Ipos ........................................... 284
Baking Game Ipos ........................................................ 284
Frame Rate and Simulation Speed ....................................... 285
Ctrl+Alt+Shift+P .......................................................... 288
Actor Parameters, Boundaries, and Hull Types ...................... 295
General Tips on Working with Bullet ................................. 305
Joints, Ragdolls, and Robots ............................................ 306
Using Rigid Body Joint Constraints ...................................... 306
Using Generic (6DoF) Joints ............................................. 309
Setting Up a Ragdoll Armature ......................................... 310
Controlling an Armature ............................................... 317
A Passive-Walking Robot ............................................... 319
Further Resources ........................................................ 324
