About the Series Editors xi

Preface xiii

Acknowledgments xvii

1 Introduction to Wireless Propagation 1
   1.1 Introduction 1
   1.2 Wireless Propagation Basics 4
   1.3 Link Budgets 9
   1.4 Projects
      Project 1.1: Fast Fading Series 12
      Project 1.2: Shadowing Plus Multipath 19
      Project 1.3: Complex Envelope Series 23
   1.5 Summary 26
   References 26
   Software Supplied 27

2 Shadowing Effects 29
   2.1 Introduction 29
   2.2 Projects
      Project 2.1: Knife-Edge Diffraction Calculations by Means of Numerical Integration 39
      Project 2.2: Knife-Edge Diffraction Calculations Using Functions C and S 41
      Project 2.3: Simple Building Shadowing Model 42
      Project 2.4: Simple Street Model. Correlated Shadowing Series 46
      Project 2.5: Terrain Effects. Four-Ray Model 48
      Project 2.6: Other Screen Shadowing Scenarios 51
      Project 2.7: Terrain Effects. Edwards and Durkin Method 54
   2.3 Summary 59
   References 59
   Software Supplied 60
3 Coverage and Interference 61
  3.1 Introduction 61
  3.2 Hata Model 65
  3.3 Projects 66
    Project 3.1: Generating Realistic Series with Path Loss and Shadowing 66
    Project 3.2: Generating Partially Cross-Correlated Shadowing Series 71
    Project 3.3: Area Coverage 75
    Project 3.4: Multiple Interference 78
  3.4 Summary 81
  References 82
  Software Supplied 82

4 Introduction to Multipath 83
  4.1 Introduction 83
  4.2 Projects 84
    Project 4.1: Direct Signal, Angle of Arrival and Doppler Shift 84
    Project 4.2: Direct and Reflected Signals 91
    Project 4.3: Two Scatterers 94
    Project 4.4: Multiple Scatterers 97
    Project 4.5: Standing Wave due to Multipath 99
    Project 4.6: Quasi-standing Wave 100
    Project 4.7: Link Between Moving Terminals 102
  4.3 Summary 103
  References 103
  Software Supplied 104

5 Multipath: Narrowband Channel 105
  5.1 Introduction 105
  5.2 Projects 105
    Project 5.1: The Clarke Model 106
    Project 5.2: The Rice Channel 117
    Project 5.3: Rayleigh Channel Simulator using Sinusoidal Generators 119
    Project 5.4: Simulator using Two Filtered Gaussians in Quadrature. Butterworth Response 123
    Project 5.5: Diversity and Combining at the Mobile Station 129
    Project 5.6: Diversity and Combining at the Base Station 131
  5.3 Summary 135
  References 135
  Software Supplied 135

6 Shadowing and Multipath 137
  6.1 Introduction 137
  6.2 Projects 137
    Project 6.1: The Suzuki Model 137
    Project 6.2: Power Control 142
7 Multipath: Wideband Channel 153
7.1 Introduction 153
7.2 Deterministic Multiple Point-Scatterer Model 155
7.3 Channel System Functions 157
7.4 Stochastic Description of the Wireless Channel 160
7.5 Projects
   Project 7.1: Time-Varying Frequency Response 165
   Project 7.2: Ideal Channel in the Time-Delay Domain and Channel Sounding 172
   Project 7.3: The Scattering Function 176
   Project 7.4: Tapped Delay-Line Models – COST 207 179
7.6 Summary 184
References 184
Software Supplied 185

8 Propagation in Microcells and Picocells 187
8.1 Introduction 187
8.2 Review of Some Propagation Basics 187
8.3 Microcell and Picocell Empirical Models 195
8.4 Projects
   Project 8.1: The Two-Ray Model 197
   Project 8.2: Street Canyon Propagation 202
   Project 8.3: Side Street Scenario 204
   Project 8.4: Wideband Indoor Propagation – The Saleh-Valenzuela Model 205
   Project 8.5: Building Penetration Through Windows 209
8.5 Summary 211
References 211
Software Supplied 212

9 The Land Mobile Satellite Channel 213
9.1 Introduction 213
9.2 Projects
   Project 9.1: Two-State Markov Model 214
   Project 9.2: Coverage Using Constellations of Satellites 219
   Project 9.3: LMS Propagation in Virtual Cities 221
   Project 9.4: Doppler Shift 224
9.3 Summary 226
References 226
Software Supplied 227
## 10 The Directional Wireless Channel
