Advances in
Organic Light-Emitting Devices

Youngkyoo Kim
Blackett Laboratory, Department of Physics,
Imperial College London, London SW7 2BW, United Kingdom
and Department of Chemical Engineering,
Kyungpook National University, Daegu, 702-701, Korea

and

Chang-Sik Ha
Department of Polymer Science and Engineering,
Pusan National University, Busan 609-735, Korea

TRANS TECH PUBLICATIONS LTD
Switzerland • UK • USA
### Table of Contents

1. History of the OLED ......................................................................................................................... 1

2. Introduction to OLEDs ...................................................................................................................... 7

   2.1 Classification of OLEDs .............................................................................................................. 7
   2.2 OLED Using Small Organic Molecules ....................................................................................... 7
   2.3 PLED Using Emissive Polymers .................................................................................................. 9
   2.4 Hybrid OLED ............................................................................................................................ 11
   2.5 Kinds of Devices According to Function and Structure .............................................................. 13

3. The Physics behind OLEDs ................................................................................................................. 21

   3.1 Basic Mechanism ....................................................................................................................... 21
   3.2 Charge Carrier Injection and Transport ....................................................................................... 22
      3.2.1 Charge Injection Mechanisms ............................................................................................. 25
      3.2.1a Thermionic Emission Mechanisms .................................................................................... 25
      3.2.1b Tunneling Injection Mechanisms ....................................................................................... 28
      3.2.2 Charge Transport Mechanisms ........................................................................................... 29
      3.2.2a Ohmic Transport Regime \((m=0)\) ....................................................................................... 30
      3.2.2b Space-Charge Limited Transport Regime \((m=1)\) ................................................................. 31
      3.2.2c Trap-Charge Limited Transport Regime \((m > 1)\) ............................................................... 32
      3.2.2d Trap-filled Space Charge Limited Transport Regime \((m = 1)\) ......................................... 33
      3.2.3 Case Studies for Charge Injection and Transport Characteristics ....................................... 33
      3.2.3a Charge Injection Studies .................................................................................................... 33
      3.2.3b Charge Transport Studies .................................................................................................. 36

   3.3 Delayed EL Owing to Low Charge Carrier Mobility ................................................................... 40

   3.4 Generation of Singlet and Triplet Excitons in OLEDs ................................................................. 41
      3.4.1 Exciton Generation by Optical Excitation ............................................................................ 41
      3.4.2 Exciton Generation by Charge Injection ............................................................................. 43

   3.5 Efficiency of OLEDs .................................................................................................................... 44
      3.5.1 Photoluminescence Quantum Efficiency in Films ............................................................... 44
      3.5.2 Electroluminescence Quantum Efficiency in OLEDs ............................................................ 46
      3.5.3 Luminous and Energy Efficiencies in OLEDs .................................................................... 48

   3.6 Exciton Energy Transfer from Donor (Host) to Acceptor (Guest) ............................................... 49
      3.6.1 Förster Energy Transfer ....................................................................................................... 50
      3.6.2 Dexter Energy Transfer ....................................................................................................... 51
3.6.3 Examples of High Efficiency Devices using a Doped Layer 

4. Organic Materials (Small Molecules) for OLEDs

4.1 Hole-injecting Materials 
4.2 Hole-transporting Materials 
4.3 Light-emitting Materials (Organic Light-Emitters)
  4.3.1 Green Light-emitting Materials 
  4.3.2 Blue Light-emitting Materials 
  4.3.3 Red Light-emitting Materials 
4.4 Hole-blocking Materials 
4.5 Electron-transporting Materials 
4.6 Electron-injecting Materials 
4.7 Electrodes

5. Polymeric Materials for PLEDs

5.1 Polymers for Buffer Layer 
5.2 Light-emitting Polymers
  5.2.1 Green LEPs 
  5.2.2 Blue LEPs 
  5.2.3 Red LEPs 
5.3 Hole-blocking/Electron-transporting/Electron-injecting Polymers 
5.4 Electrode Materials

6. Materials for Hybrid OLEDs

6.1 Materials for All-organic HOLEDs 
  6.1.1 Main Chain Polymers for HIL or HTL 
  6.1.2 Side Chain Polymers for HIL or HTL 
  6.1.3 Molecularly-Doped Polymers for HIL and HTL 
6.2 Materials for Organic-Inorganic HOLEDs

7. Reliability and Lifetime

7.1 Moisture Effect 
7.2 Oxygen Effect 
7.3 Impurity Effect 
7.4 Progressive Electrical Short 
7.5 Solvent and Polymer Side-Chain Effects in PLEDs 
7.6 Intrinsic Material Stability and Luminance Decay Mechanism

8. OLED Displays

8.1 Passive Matrix-Organic Light-emitting Display (PM-OLED)
