## Contents

Foreword *by John Zachman*
Foreword *by Sjir Nijssen*
Foreword *by Gordon Everest*
Preface

### 1 Introduction 1

1.1 Information Modeling 2
1.2 Modeling Approaches 6
1.3 Some Historical Background 19
1.4 The Relevant Skills 23
1.5 Summary 24

### 2 Information Levels and Frameworks 27

2.1 Four Information Levels 28
2.2 The Conceptual Level 32
2.3 Database Design Example 43
2.4 Development Frameworks 48
2.5 Summary 55
### 3 Conceptual Modeling: First Steps 59

3.1 Conceptual Modeling Language Criteria 60  
3.2 Conceptual Schema Design Procedure 62  
3.3 CSDP Step 1: From Examples to Elementary Facts 63  
3.4 CSDP Step 2: Draw Fact Types and Populate 81  
3.5 CSDP Step 3: Trim Schema; Note Basic Derivations 95  
3.6 Summary 104

### 4 Uniqueness Constraints 109

4.1 Introduction to CSDP Step 4 110  
4.2 Uniqueness Constraints on Unaries and Binaries 111  
4.3 Uniqueness Constraints on Longer Fact Types 122  
4.4 External Uniqueness Constraints 128  
4.5 Key Length Check 137  
4.6 Projections and Joins 150  
4.7 Summary 155

### 5 Mandatory Roles 159

5.1 Introduction to CSDP Step 5 160  
5.2 Mandatory and Optional Roles 162  
5.3 Reference Schemes 174  
5.4 Case Study: A Compact Disc Retailer 193  
5.5 Logical Derivation Check 200  
5.6 Summary 207

### 6 Value, Set-Comparison, and Subtype Constraints 211

6.1 Introduction to CSDP Step 6 212  
6.2 Basic Set Theory 212  
6.3 Value Constraints and Independent Types 216  
6.4 Subset, Equality, and Exclusion Constraints 224  
6.5 Subtyping 238  
6.6 Generalization of Object Types 260  
6.7 Summary 268

### 7 Other Constraints and Final Checks 271

7.1 Introduction to CSDP Step 7 272  
7.2 Occurrence Frequencies 272  
7.3 Ring Constraints 277  
7.4 Other Constraints and Rules 289  
7.5 Final Checks 295  
7.6 Summary 303
8  Entity Relationship Modeling  305
  8.1  Overview of ER  306
  8.2  Barker notation  308
  8.3  Information Engineering notation  318
  8.4  IDEF1X  322
  8.5  Mapping from ORM to ER  334
  8.6  Summary  342

9  Data Modeling in UML  345
  9.1  Introduction  346
  9.2  Object-Orientation  348
  9.3  Attributes  351
  9.4  Associations  357
  9.5  Set-Comparison Constraints  364
  9.6  Subtyping  372
  9.7  Other Constraints and Derivation Rules  376
  9.8  Mapping from ORM to UML  388
  9.9  Summary  395

10  Advanced Modeling Issues  399
  10.1  Join Constraints  400
  10.2  Deontic Rules  408
  10.3  Temporality  411
  10.4  Collection Types  432
  10.5  Nominalization and Objectification  439
  10.6  Open/Closed World Semantics  450
  10.7  Higher-Order Types  456
  10.8  Summary  469

11  Relational Mapping  473
  11.1  Implementing a Conceptual Schema  474
  11.2  Relational Schemas  475
  11.3  Relational Mapping Procedure  483
  11.4  Advanced Mapping Aspects  510
  11.5  Summary  525

12  Data Manipulation with Relational Languages  527
  12.1  Relational Algebra  528
  12.2  Relational Database Systems  554
  12.3  SQL: Historical and Structural Overview  556
  12.4  SQL: Identifiers and Data Types  558
  12.5  SQL: Choosing Columns, Rows, and Order  562
