## Contents

### 3 Propagation and radiation of sound
- 3.1 Omnidirectional sound radiation of point sources ........................................... 67
- 3.2 Omnidirectional sound radiation of line sources ............................................. 68
- 3.3 Volume velocity sources ..................................................................................... 70
- 3.4 Sound field of two sources ................................................................................. 72
- 3.5 Loudspeaker arrays ............................................................................................ 85
  - 3.5.1 One-dimensional piston ................................................................................. 87
  - 3.5.2 Formation of main and side lobes ................................................................. 91
  - 3.5.3 Electronic beam steering ............................................................................. 96
  - 3.5.4 Far-field conditions ..................................................................................... 100
- 3.6 Sound radiation from plane surfaces ................................................................ 103
  - 3.6.1 Sound field on the axis of a circular piston .................................................. 106
- 3.7 Summary ............................................................................................................. 110
- 3.8 Further reading .................................................................................................. 111
- 3.9 Practice exercises ............................................................................................... 111

### 4 Structure-borne sound
- 4.1 Introduction ......................................................................................................... 117
- 4.2 Bending waves in beams .................................................................................... 120
- 4.3 Propagation of bending waves .......................................................................... 124
- 4.4 Beam resonances ............................................................................................... 126
  - 4.4.1 Supported beams ........................................................................................ 127
  - 4.4.2 Bilaterally mounted beams ......................................................................... 129
  - 4.4.3 Bilaterally suspended beams ..................................................................... 132
- 4.5 Bending waves in plates .................................................................................... 133
  - 4.5.1 Plate vibrations ........................................................................................... 136
- 4.6 Summary ............................................................................................................. 140
- 4.7 Further reading .................................................................................................. 141
- 4.8 Practice exercises ............................................................................................... 141

### 5 Elastic isolation
- 5.1 Elastic bearings on rigid foundations .................................................................. 143
- 5.2 Designing elastic bearings ................................................................................ 145
- 5.3 Influence of foundations with a compliance ....................................................... 150
  - 5.3.1 Foundation impedance ............................................................................... 153
  - 5.3.2 The effect of foundation impedance ........................................................... 154
- 5.4 Determining the transfer path ............................................................................ 157
- 5.5 Determining the loss factor .............................................................................. 160
- 5.6 Dynamic mass .................................................................................................... 164
- 5.7 Conclusion .......................................................................................................... 166
- 5.8 Summary ............................................................................................................. 167
- 5.9 Further reading .................................................................................................. 167
- 5.10 Practice exercises ............................................................................................. 167
