</table>
ZBOINSKY, K.- DUSZA, M. (Poland)
Analysis of Lateral Stability of a Railway Vehicle Model in the Context of Different Values of Rail Inclination ................................................................. 153

CHUDZIKIEWICZ, A.- DROZDZIEL, J.- FRONCZAK, A.- SOWINSKI, B. (Poland)
Simulation of A Railway Vehicle Dynamics on Tracks with Different Maintenance States .................................................................................................................. 161

KARDAS-CINAL, E.- ZBOIŃSKI, M. (Poland)
On Investigation of Safety of a Railway Vehicle in the Presence of Random Track Irregularities ..................................................................................................................... 169

NAGY, V.- BOZÓKY, L.- SZAUTER, F. (Hungary)
Reduction of Vibrations Generated by the Drive System of Rail Vehicles ........................................ 177

HOFFMANN, M.- TRUE, H. (Denmark)
The Dynamics of Two-Axle Freight Wagons With UIC Standard Suspension ...................... 183

BORONKAI, L. (Austria)
The Numerical Simulation of the Equivalent Bending Stress Amplitude of a Railway Wheelset Axle as a Function of the Velocity .............................................................. 191

JIROUT, M.- LUGNER, P.- MACK, W. (Austria)
Dynamic Simulation of the Contact Forces in the Transmission Link of a Magnetic Track-Brake in Low Suspension .................................................................................. 199

KOBISHANOV, V.- ANTIPIN, D. (Russia)
Improvement of the Dynamical Loading of Passenger Cars on Basis of Hybrid Dynamical Models .................................................................................................................. 207

PIOTROWSKI, J.- PAZDZIERNIAK P.- ADAMCZEWSKI, T. (Poland)
Curving Dynamics of a Freight Wagon with One- and Two-Dimensional Friction Damping ...................................................................................................................... 215

SAKANOUE, K.- MORISHITA, Y.- TANIFUJI, K. (Japan)
Quantification of Riding Comfort of High-Speed Trains on Curved Track Based on the Experiments Using a Vehicle Dynamic Simulator .............................................. 223

BEITELSCHMIDT, M.- STÜWING, D.- QUARZ, V. (Germany)
Acoustic Optimization of Wheelsets ............................................................................................ 231

GÁSPÁR, P.- SZABÓ, Z.- BOKOR, J. (Hungary)
An Estimation Method for the Wheel-Rail Friction Coefficient ................................................... 237

ORLOVA, A. (Russia)
Identification of Parameters for Spatial Wedge System Implemented in Freight Bogie Design ....................................................................................................................... 245

CSÁSZÁR, L.- ZOBORY, I. (Hungary)
Vehicle Diagnostics Purpose Application of Operator-Valued Stochastic Processes ................. 253

GOIA, I.- GHITA, E. (Romania)
Technological aspects regarding the geometry And materials of the elastic tram wheel and urban rail .................................................................................................................. 265

GOIA, I.- GHITA, E. (Romania)
Researches about the Evolution of the Wheel Profiles and Materials for The City Railway Transportation ....................................................................................................... 277
Assessment of the Operational Capacity of a Railway Bogie Welded Structure

Identification of the Stiffness Characteristics of a 3D Brush Model Taking Into Account the Tyre Tread Design

How the Elastic Tyre Rewrites the Road Bumps

Theoretical and Experimental Study of Large Amplitude Shimmy of Tyres

Nonlinear Simulation of the Suspension and Steering Systems of Road Vehicles – Multibody Dynamics

Vehicle Steerability Evaluation on the Basis of Random Steering Input Test

Increasing of Vehicle Comfort Using Smart Fluid Devices

Non-Linear Seat and Driver Modelling for Road Vehicle Dynamic Co-ort Characterization

The Analysis of the Radius Offset Influence on the Run of the Braking Process on the μ-Split Road for a Vehicle Equipped with the ABS System

Control System Design of a Four Wheels Steering Race Vehicle

Analysis of the Influence of Motorcycle Selected Parameters on Its Stability

Structural Optimisation of a Single Suspension Downhill Bike through Dynamic Analysis

The Shape Modelling Using Photogrammetry Method, for an Automobile Involved in a Road Accident

The Use of Records of Car Black Boxes for the Reconstruction of Kinematics of Road Accidents

Road Traffic and the Noise in Urban Area

About Influence of Dozer Tracks Normal Load’s Repetitivity on Its Working Ability
SESSION FOR DYNAMICS, IDENTIFICATION AND ANOMALIES OF AIRCRAFT AND SHIPS

GAUSZ, T.- GAUSZ, Zs. (Hungary)
Analysis of Helicopter Rotor Blade Behaviour Based on Non-linear Equations of Motion ................................................................. 431
VERESS, Á.- MOLNÁR, J. (Hungary)
Compressible Viscous Flow Modelling .................................................. 439
KORSCH, H.- DAFNIS, A.- REIMERVERDES, H.G. (Germany)
Dynamic Response of Flexible Wind Tunnel Wing Models ................. 443
GÁTI, B.- SOMOS, M. (Germany)
Simulation of Near-Flexible Flying Wing .......................................... 453
STROE, G.L.- ANDREI, I.C.- SIKOLYA, L.- KORODY, E.
(Romania + Hungary)
Study of Frequency Response Design Goals ...................................... 463
MYSCHIK, S.- SACHS, G. (Germany)
On-Board Wind Measurement System Based on Navigation Data for Small Airplanes ................................................................. 471
DA COSTA, O.- SACHS, G. (Germany)
Periodic Optimal Control for Aircraft Endurance Enhancement Using Shear Wind Associated with Jet Streams ................................. 479
MORAVSZKI, Cs.- SACHS, G. (Germany)
Predictive Flight Path Display for Hypersonic Trajectory Control Improvement ................................................................. 487
POKORÁDI, L. (Hungary)
Development of a Two-Dimensional Aircraft Maintenance Estimation Method ................................................................. 495

SESSION FOR VEHICLE CONTROL THEORY AND INTERDISCIPLINARY SCIENCES

FLORES, L.- DRIVET, A.- RAMÍREZ-MENDOZA, R. A.- SENAME, O.- POUSSOT VASSAL, C.- DUGARD, L. (France + Mexico)
Hybrid Optimal Control for Semi-Active Suspension Systems ............ 505
CAROUX, J.- SPROESSER, Th.- BASSET, M.- GISSINGER, G.L.
(France)
Identification of Lateral Vehicle Behaviour for Observer-Based Sideslip Angle Estimation ................................................................. 513
BRAGHIN, F.- RESTA, F.- SABBIONI, E. (Italy)
A Suspension Control Strategy for Improving Ride Comfort of High-Performance Vehicles ................................................................. 521
CHIRIAC, A.- BOLTOȘI, A.- NAGY, R. (Romania)
Models of Control of Semi-Active Vehicle Suspensions, Realized with Smart Fluids ................................................................. 531
BALOGH, L.- STRÉLI, T.- NEMETH, H.- PALKOVICS, L. (Hungary)
Control of Self-Amplifying Brake Mechanism .................................... 537
SZABÓ, B.- TAKÁCS, D.- STÉPÁN, G. (Hungary)
Vehicle Model for an Automatic Parking Control System .................... 549
BÉDA, P. (Hungary)  
Satellite Attitude Control via Retrieval and Deployment ........................................ 557

FÜLEP, T.- ÖBERLING, J. (Hungary)  
Design of X-by-Wire Architectures Based on Reliability Analyses of Electronically Non-Redundant Systems ............................................................... 565

KOLONITS, F. (Hungary)  
Fretting in a Hub-Axle Press Fit Joint ........................................................................ 573

NAGY, R.- BOLTOSI, A.- CHIRIAC, A. (Romania)  
Heat Transfer at Vehicle Smart Fluid Dampers ......................................................... 585

BAUER, P. (Hungary)  
Possible Improvements in a Vortex-Lattice Panel Method ....................................... 591

NÉMETH, I.- SCHLEINZER, G. (Austria)  
On Modelling of Amplitude and Frequency Dependent Mechanical Properties in Elastomeric Structures .......................................................... 599

DÓRA, S. (Hungary)  
A Survey of Conventional and Alternative Methods for Digital Simulation of Stochastic Processes ................................................................. 607

HARMATI, I.- RÖVID, A.- VÁRLAKI, P. (Hungary)  
Application of Tensor Product Models for Vehicle Deformational Processes ......... 615

KOVÁCS, K. (Hungary)  
Fatigue Models Based on Differential Equations ....................................................... 621

SZIGETI, D.- ZOBORY, I. (Hungary)  
Dynamical Simulation of Overtaking in Traffic Flows ............................................. 67

ADVERTISEMENTS ........................................................................................................ 645
