LECTURE NOTES ON
PRINCIPLES OF
PLASMA PROCESSING

Francis F. Chen
Electrical Engineering Department

and

Jane P. Chang
Chemical Engineering Department

University of California
Los Angeles, California

Springer
# Plasma Physics

## PART A1: INTRODUCTION TO PLASMA SCIENCE

I. **What is a plasma?** 1

II. **Plasma fundamentals** 3

   1. Quasineutrality and Debye length
   2. Plasma frequency and acoustic velocity
   3. Larmor radius and cyclotron frequency
   4. \(E \times B\) drift
   5. Sheaths and presheaths

## PART A2: INTRODUCTION TO GAS DISCHARGES

III. **Gas discharge fundamentals** 11

   1. Collision cross section and mean free path
   2. Ionization and excitation cross sections
   3. Coulomb collisions; resistivity
   4. Transition between neutral- and ion-dominated electron collisions
   5. Mobility, diffusion, ambipolar diffusion
   6. Magnetic field effects; magnetic buckets

   Cross section data 21

## PART A3: PLASMA SOURCES I

IV. **Introduction to plasma sources** 25

   1. Desirable characteristics of plasma processing sources
   2. Elements of a plasma source

## PART A4: PLASMA SOURCES II

V. **RIE discharges** 31

   1. Debye sheath
   2. Child-Langmuir sheath
   3. Applying a DC bias
   4. Applying an RF bias
   5. Displacement current
   6. Ion dynamics in the sheath
   7. Other effects in RIE reactors
   8. Disadvantages of RIE reactors
   9. Modified RIE devices

# Plasma Chemistry

## PART B1: OVERVIEW OF PLASMA PROCESSING IN MICROELECTRONICS FABRICATION

I. **Plasma processing** 99

II. **Applications in Microelectronics** 100

## PART B2: KINETIC THEORY AND COLLISIONS

I. **Kinetic theory** 103

II. **Practical gas kinetic models and macroscopic properties** 109

   1. Maxwell-Boltzmann distribution (MBD)
   2. A simplified gas model (SGM)
   3. Energy content
   4. Collision rate between molecules
   5. Mean free path
   6. Flux of gas particles on a surface
   7. Gas pressure
   8. Transport properties
   9. Gas flow

III. **Collision dynamics** 119

   1. Collision cross sections
   2. Energy transfer
   3. Inelastic collisions

## PART B3: ATOMIC COLLISIONS AND SPECTRA

I. **Atomic energy levels** 125

II. **Atomic collisions** 126

   1. Excitation processes
   2. Relaxation and recombination processes

III. **Elastic collisions** 129

   1. Coulomb collisions
   2. Polarization scattering

IV. **Inelastic collisions** 130

   1. Constraints on electronic transitions
   2. Identification of atomic spectra
   3. A simplified model
