## Contents

**Preface**  
page vii

1. Emerging medical technologies: high stakes science and the need for technology assessment  
2. Bioengineering and technology assessment  
3. Health and economic data: a global comparison  
4. World health and global health challenges  
5. Healthcare systems: a global comparison  
6. Healthcare costs vs. time: trends and drivers  
7. The evolution of technology: scientific method, engineering design, and translational research  
8. Prevention of infectious disease  
9. Ethics of clinical research  
10. Technologies for early detection and prevention of cancer  
11. Cost effectiveness of screening for disease  
12. Technologies for treatment of heart disease  
13. Clinical trial design and sample size calculation  
14. Technology diffusion  
15. Regulation of healthcare technologies  
16. Future of bioengineering and world health
