RUNNING SMALL MOTORS WITH PIC® MICROCONTROLLERS

Harprit Singh Sandhu
CONTENTS

Preface xi

PART I Microcontrollers 1

Chapter 1 Introduction to microEngineering Labs' LAB-X1 Experimental Board 3

Chapter 2 Getting Started 13
The Hardware and Software 13
The Programmers 14
Loading the Software 15

Chapter 3 Understanding the Microchip Technology 19
PIC 16F877A: Features of the MCU

Chapter 4 The Software, Compilers, and Editors 33
Basic Compiler Instruction Set 33
PICBASIC PRO Compiler Instruction Set 35
PICBASIC PRO Compiler 39
PICBASIC PRO Tips and Cautions 41

Chapter 5 Controlling the Output and Reading the Input 43
Generating Outputs 44
The LCD Display 48
Writing Binary, Hex, and Decimal Values to the LCD 52
Exercises 75

Chapter 6 Timers and Counters 79
Timers 80
The Watchdog Timer 101
Counters 101
Pre-scalers and Post-scalers 108
Timer Operation Confirmation 109
Exercises for Timers 109
Exercises for Counters 109
Chapter 7 Clocks and Memory: Sockets U3, U4, U5, U6, U7, and U8
Sockets U3, U4 and U5: For Serial One Wire Memory Devices 111
Socket U6: Real Time Clocks 118
Sockets U7 and U8 124

Chapter 8 Serial Communications: Sockets U9 and U10
When and How Will I Know the Interface Is Working? 132
Using the RS485 Communications 135

Chapter 9 Using Liquid Crystal Displays: An Information Resource
Using LCDs in Your Projects 140
Understanding the Hardware and Software Interaction 140
Talking to the LCD 142
Liquid Crystal Display Exercises 152

PART II Running the Motors

Chapter 10 The PIC 18F4331 Microcontroller: A Minimal Introduction
The PIC 18F4331 Can Be Used in the LAB-X1 160

Chapter 11 Running Motors: A Preliminary Discussion
R/C Hobby Servo Motors 163
Stepper Motors 164
DC Motors with Attached Encoders 165
Relays and Solenoids 165
"The Response Characteristics" of a Motor 166

Chapter 12 Motor Amplifiers
Notes on Homemade Amplifier Construction 170
The Xavien 2-Axis Amplifier 171
The 1-Axis Xavien Amplifier 173
The Solarbotics 2-Axis Amplifier 175

Chapter 13 Running Hobby R/C Servo Motors
Model Aircraft Servos 180
Wiring Connections 180

Chapter 14 Running Small DC Motors with Permanent Magnet Fields
PWM Frequency Considerations 193
Connections to the Amplifier and Processor 193
The Software to Run the Motor 195
Chapter 15  Running DC Motors with Attached Incremental Encoders  
Changing the Processor in the LAB-X1  202  
DC Servo Motors with Encoders  203  
The Programs  215  

Chapter 16  Running Bipolar Stepper Motors  
Stepper Motor and Amplifier Selection  262  
Running the Motor  263  

Chapter 17  Running Small AC Motors: Using Solenoids and Relays  
Running a Motor  284  
Using a Relay  285  

Chapter 18  Debugging and Troubleshooting  
Problem: The Microcontroller Crystal Circuit Must Oscillate  287  
Using the PBP Compiler Commands to Help Debug a Program  290  
Debugging at the Practical Level  292  
Configuring the 16F877A and Related Notes  295  
Questions and Answers  296  
Settings  298  

Chapter 19  Conclusion  303  

PART III  Appendixes  305  

Appendix A  Setting up Compiler for One Keystroke Operation  307  
Appendix B  Abbreviations Used in the Book and in the Data Sheets  309  
Appendix C  The Book Support Web Site  313  
Appendix D  Sources of Materials  315  
Controller from Encodergeek.com  316  
Appendix E  Motor Control Language: Some Minimal Ideas, Guidance, and Notes  321  
Language Commands  321  
Interrogation  322  
An Industrial Language Used by CNC Machines  323  

Index  327
