### Chapter 1  Software Agent Technology .............................................. 1

1.1 Introduction ...................................................................................... 1
1.2 Why Agent-Based Systems? ............................................................ 1
1.3 Basic Definitions ............................................................................ 3
1.4 Agent Properties ............................................................................ 5
1.5 Classifications of Agents .............................................................. 6
1.6 Basic Agent Architectures ............................................................. 10
  1.6.1 Deliberative Agents ............................................................... 10
  1.6.2 Reactive Agents .................................................................. 13
  1.6.3 Hybrid Approaches .............................................................. 14
1.7 Multiagent Systems ....................................................................... 15
1.8 Agent Interaction ........................................................................... 17
  1.8.1 Communication ................................................................... 18
    1.8.1.1 Blackboard Technique for Communication .................. 18
    1.8.1.2 Messages and Conversations for Communication ......... 19
    1.8.1.3 Agent Communication Languages .............................. 20
  1.8.2 Agent Cooperation ............................................................... 25
    1.8.2.1 Collaboration ............................................................... 27
    1.8.2.2 Coordination ............................................................... 27
    1.8.2.3 Conflict Resolution .................................................... 28
  1.8.3 Agent Mobility ....................................................................... 28
References ............................................................................................ 30

### Chapter 2  Software Quality Assurance ........................................... 37

2.1 Quality Assurance Basics ............................................................ 37
  2.1.1 Quality Assurance of Software Systems ............................... 39
  2.1.2 Quality Improvement of Software System Development ...... 41
  2.1.3 Quality Assurance of System Development Resources ........ 45
2.2 Quality Measurement and Evaluation .......................................... 47
  2.2.1 Basics in Software Measurement ......................................... 48
  2.2.2 Measurement Methods and Processes ................................. 50
2.3 Software Quality Assurance of Agent-Based Systems .......... 53
2.3.1 General Quality Aspects of Software Agents .......... 54
2.3.2 General Quality Aspects of Multiagent Systems (MASs) ................................................. 56
2.3.3 General Quality Aspects of MAS Development .......... 59
References ........................................................................ 62

Chapter 3 Agent Quality Measurement and Evaluation ...................... 65
3.1 Introduction .................................................................... 65
3.2 Review of Agent Measurement Examples ................................ 66
3.2.1 Performance Measurement by Sycara .................... 66
3.2.2 Execution Time by Guichard and Ayel ................. 67
3.2.3 Performance Simulation by Pham ......................... 67
3.2.4 Performance Evaluation by Sugawara et al. ........... 67
3.2.5 Monitoring and Recording Agent Performance by Tambe ......................................................... 67
3.2.6 Performance Measurement by Russel and Norvig .... 68
3.2.7 Problem-Solving Performance by Joshi ............... 68
3.2.8 Performance Analysis of Mobile Agents by Kotz et al. ......................................................... 69
3.2.9 Performance Measuring in Large Networks by Wijata .......................................................... 71
3.2.10 RPC Performance by Kotz et al. ......................... 72
3.2.11 Further Performance Evaluations ....................... 72
3.2.12 Influences of the Knowledge Granularity on the Agent Performance by Ye and Tsotsos .......... 72
3.2.13 Utility Evaluation by Tewari and Maes ............... 73
3.2.14 Usability Level Determination by Develin and Scott .............................................................. 73
3.2.15 Usability Measures by Caballero et al. .................. 74
3.2.16 Goal Evaluation by Norman and Long ................ 75
3.2.17 Evaluation Function by Russel and Norvig ........... 75
3.2.18 Support Evaluation by Yang and Choi ............... 76
3.2.19 Fitness Evaluation by Loia and Sessa ............... 76
3.2.20 Fitness Evaluation by Liu .................................. 76
3.2.21 Fitness Evaluation by Eymann ......................... 78
3.2.22 Service-Level Measurement by Bissel et al. ........ 78
3.2.23 Resource Allocation Simulation by Bredin et al. .... 79
3.2.24 Cooperation Measurement by Klusch and Sycara .... 79
3.2.25 Distributed Decision Measurement of Coordination by Barber ........................................... 79
3.2.26 Coalition Value Estimation by Shehory et al. ........ 80
3.2.27 Communication Index by Pedrycz and Vokovich .... 80
3.2.28 Intelligence Factors by Hasebrook et al. .......... 81
3.2.29 Trust Measurement by Chang et al. .................. 82
Chapter 4

Quality Measurement of Agent Systems

4.1 Introduction ........................................................................ 93
4.2 Quality Measurement Approaches of a Multiagent System (MAS) ........................................................................ 94
4.2.1 Comparison of Communication by Pham ..................... 94
4.2.2 Communication Quality Evaluation by Lukschandl ............ 94
4.2.3 Risk Evaluation by Collins et al. .................................. 95
4.2.4 Size Estimation by Evans et al. .................................... 96
4.2.5 Load Management by Gustavsson ............................... 96
4.2.6 Coalition Evaluation by Katoh et al. ............................. 97
4.2.7 Coordination Evaluation by Tolksdorf .......................... 97
4.2.8 The Simple Thread Language (STL)-Based Simulation by Schumacher .................................................... 98
4.2.9 MAS Information Model Simulation by Egashira and Hashimoto ................................................................. 99
4.2.10 Analysis of Agent Populations by Liu ......................... 99
4.2.11 Business-to-Business (B2B) Model Performance by Ouksel et al. ............................................................... 100
4.2.12 Performance Measurement of Large Distributed MASs by Helsinger ...................................................... 101
4.2.13 Measurement of Coordination Performance by Ahn and Park ................................................................. 102
4.2.14 Performance Measurement in Telematics by Gerber ........ 102
4.2.15 Performance Measurement in Telecommunication by Gibney et al. .......................................................... 103

**Chapter 5** Quality-Based Development of Agent Systems .......................... 113

5.1 Introduction .................................................................................. 113

5.2 Quality Measurement Examples of Multiagent System (MAS) Development ........................................ 113

5.2.1 Aspect-Oriented versus Pattern-Oriented MAS Development by Garcia et al. .............................. 113

5.2.2 Evaluation of MAS Based on the ROADMAP Meta-Model by Juan and Sterling ................. 116

5.2.3 Agent Framework Evaluation by Tambe, Pynadath, and Chauvat .............................................. 117

5.2.4 Unified Modeling Language (UML) and Measurement Intentions by Bertolino, Dimitrov, Dumke, and Lindemann ............................................................... 119

5.2.5 Agent Communication Language Evaluation, Singh ................................................................. 121

5.2.6 Multiagent System Development Approach Evaluation by Lind ............................................. 122

5.2.7 Development of Agent-Based Graphical User Interfaces (GUIs) by Kernchen ....................... 123

5.2.8 MAS Paradigm Evaluation by Wong, Paciorek, and Moore ..................................................... 124

5.2.9 MAS Quality Measurement by Far ......................................................................................... 125

5.3 Measurement Evaluation of MAS Development Resources ........................................................................ 126

5.3.1 MAS Platform Evaluation by Ricordel and Demazeau ............................................................. 126

5.3.2 Measurement Study of the JADE Platform by Piccolo et al. ..................................................... 126

5.3.3 Performance of Open-Source Multiagent Platforms by Mulet et al. .......................................... 127
5.3.4 Evaluation of JAVA-Based Agent Technologies by Kernchen et al. .............................................. 128
5.3.5 Measurement of Agent Academy by Wille .......... 129
5.3.6 Performance of Agent Location Mechanisms by Ben-Ami and Shehory ........................................... 130
5.3.7 Performance of Multiagent Learning Algorithms by Panait and Luke .............................................. 131
5.3.8 Middleware Evaluation by Poslad et al. .............. 132
5.3.9 Measuring Resource Usage for Self-Interested Agents by He ............................................................... 132
5.3.10 Measurement of DAML+OIL Ontologies by Wille ............................................................................. 133

5.4 Discussion ............................................................................. 135

References .............................................................................. 137

Chapter 6 Conclusions and Future Directions ................................................. 139

6.1 Summary of the Current Situation ............................................. 139

6.1.1 Quality Measurement of Software Agents ................. 139

6.1.1.1 Measurement Situation of Agent Design Level ........ 139

6.1.1.2 Measurement Situation of Agent Description Level .... 139

6.1.1.3 Measurement Situation of Agent Working Level ........ 140

6.1.2 Quality Measurement of Agent Systems ..................... 140

6.1.2.1 Measurement Situation of Multiagent System (MAS) Design Level .............................................. 140

6.1.2.2 Measurement Situation of MAS Description Level ................................................................. 141

6.1.2.3 Measurement Situation of MAS Working Level ........ 141

6.1.3 Quality Measurement of Agent Systems Development ................................................................. 141

6.1.3.1 Measurement Situation of Agent Development Life Cycle Level ............................................. 141

6.1.3.2 Measurement Situation of Agent Development Method Level ................................................. 142

6.1.3.3 Measurement Situation of Agent Development Management Level ........................................... 142

6.1.3.4 Measurement Situation of MAS Development Life Cycle .......................................................... 142

6.1.3.5 Measurement Situation of MAS Development Method ............................................................ 142

6.1.3.6 Measurement Situation of MAS Development Management Level ........................................... 142
