Björn Ebert

Noise-Induced Jitter and Decision Errors in Rapid Single Flux Quantum Electronics
## Contents

Abstracts ................................................ III
Acknowledgement ........................................ VII

1 Introduction ........................................... 1

2 Fundamentals of single flux quantum electronics .... 5
   2.1 Basics of superconductive electronics .......... 5
      2.1.1 Magnetic flux quantization .................. 6
      2.1.2 Josephson effect ............................ 6
   2.2 Modeling of Josephson junctions ............... 9
      2.2.1 RCSJ model for time domain simulations .... 9
      2.2.2 Thermal noise model for time domain simulations 11
      2.2.3 Enhanced RCSJ model ........................ 13
   2.3 Fundamental building blocks of RSFQ electronics 14
      2.3.1 Transmission of flux quanta ................. 14
      2.3.2 Storage of flux quanta ....................... 15
      2.3.3 Josephson junction comparator ............... 16
   2.4 Selected RSFQ cells for digital circuits ....... 16
      2.4.1 Josephson transmission line ................ 17
      2.4.2 Passive transmission line .................... 18
      2.4.3 DC/SFQ converter ............................ 18
      2.4.4 Splitter ....................................... 19
      2.4.5 Confluence buffer ............................ 20
      2.4.6 Delay flip-flop .............................. 20
      2.4.7 SFQ/DC converter ............................ 22

3 Timing behavior of Josephson transmission lines and oscillators 25
   3.1 Time delay and jitter of a Josephson transmission line 26
      3.1.1 Infinitely long homogenous Josephson transmission line 26
      3.1.2 Numerical evaluation of the timing behavior 28
   3.2 Jitter and phase noise of Josephson oscillators 37
      3.2.1 Modeling of time domain jitter and phase noise 37
      3.2.2 Single Josephson junction oscillator ....... 43
3.2.3 Josephson ring oscillator .............................................. 46

4 Gray zone and timing behavior of Josephson junction comparators 49
  4.1 Josephson comparators without noise sources .......................... 50
    4.1.1 Switching and timing behavior at low-speed ......................... 50
    4.1.2 High-speed switching process of a noiseless comparator .......... 53
    4.1.3 Switching errors of Josephson comparators ....................... 54
  4.2 Josephson comparator with noise sources ............................. 55
    4.2.1 Estimation of stochastic values by sample and time averages ... 56
    4.2.2 Definition of the gray zone width .................................. 58
    4.2.3 Stochastic properties of the switching time ....................... 60
    4.2.4 Trade-off between gray zone width and speed of a comparator ... 62
    4.2.5 Autocovariance function of the output pulse stream .......... 63
  4.3 Optimization of Josephson comparators .............................. 64
    4.3.1 Introduction to multiobjective optimization ..................... 65
    4.3.2 Cell-based comparator design ..................................... 66
    4.3.3 Influence of relevant design parameters ......................... 66

5 Gray zone measurements of Josephson junction comparators 77
  5.1 Comparator test chips and numerical evaluation of their gray zones ... 78
  5.2 Experimental set-up for gray zone measurements ...................... 84
  5.3 Results of the gray zone measurements ................................ 87

6 Bit error rate of shift registers due to timing violations 93
  6.1 Timing violations in a delay flip-flop ................................ 94
  6.2 Determination of setup and hold times ................................ 94
  6.3 Relation between bit error rate and input jitter .................... 100
  6.4 Timing adjustments of a shift register .............................. 102

7 On-chip time delay and jitter measurements 107
  7.1 On-chip time delay measurements ..................................... 107
  7.2 Jitter measurements of Josephson transmission lines ............... 109

8 Conclusions and outlook ................................................. 117

Bibliography ............................................................... 120

List of abbreviations and symbols ..................................... 129
